>at the TX does not insure a matched system. It just means current and voltage
>are in phase at that point. In a matched system, the current and voltage
>will be in-phase all along the line.

That's confused at best. A line reads the same SWR end to end, neglecting line losses. The *impedance* presented varies along the line, but not the SWR. If your SWR instrument is really measuring presented impedance rather than SWR (some reflectometers work that way), then you can get confused readings like that, but that's not what's really happening on the line, its a misinterpretation of what the instrument is trying to tell you. If there are antenna currents on the outside of the coax, changing the coax length can cause a change in the SWR reading, but that's because you're actually tuning the antenna to a different resonant frequency (and feed impedance) and actually are changing the SWR. Confusing cause and effect here can lead you to try the wrong solution.

>Next, I like to run all my balanced antennas with coax and 1:1 baluns at the
>antenna. If the antenna is resonant and a balun is used, the feedline should
>not be radiating. In this case the your only alternative is to move the
>antenna farther away from the AC wiring or orienting it as close to 90
>deg. off of any wiring in the same plane.
>
>Its surprising how much RFI can be cured by dealing with feedline radiation.

That's true, Fred, but SWR shouldn't have anything to do with it.
When the currents on the line are balanced, the fields should cancel, regardless of SWR. Of course if there is unbalance, the line will radiate, and a high SWR can then cause intense induction fields at current maxima. But a high SWR alone shouldn't cause feedline radiation.

Using a dummy load at the antenna end of the coax can be a good test, more because it ensures balance on the line by eliminating antenna currents on the outside of the line than because it ensures a low SWR.

>

My knowlege of the quad (acquired in the early '60's) was
that it was designed for a high power (>100kw) christian
broadcasting station in S Amer. At this power level,
the station was suffering from corona discharge from
the tips of a yagi. Closing the loop removed the tips
of the element and voila - no more corona discharge.

If you aren't running 100kw, you don
't need a quad.

>There are certainly other more robust point-to-point digital modes
>that can outperform packet on HF.

Packet as it is currently implemented is poor, but not packet techniques
in general. As packet is currently implemented on HF, it couldn't be
much worse if someone had deliberately set out to make it perform poorly.
But there are much better methods which could be used that would allow
packet technique to work well on HF.

There are three major problems with packet as it is currently done.
First, Bell 103 is a poor modulation choice, very vulnerable to selective
fading. Second, lack of FEC combined with long frames make the current
packet protocol liable to suffer from burst errors on the channel. And third,
the way channel management is implemented in the protocol guarantees nearly
pure Aloha operation given the vagaries of HF propagation, and the overloading
of the limited channel space allocated to HF packet thus almost guarantees
congestive collapse of the channel.

There are known alternatives to address all of those problems. Packet
is very young as a HF mode, and still very much a work in progress.
If TAPR, the TNC manufacturers, the ARRL, and the FCC hadn't defacto
frozen the modem and protocol too early, we'd already be using some of
those alternatives on a wider scale. The sooner amateurs realize AX.25
and Bell 103 aren't the way to go on HF, the better. We need to move
rapidly to m-ary modulations with FEC, managed by a DAMA protocol. That
would allow us to exploit packet technique properly on the HF channel.
Multiple access can work at HF, but it must be receiver driven. CSMA
is the wrong paradigm for the HF channel.

Clover II has many of the attributes we need at HF, but lacks a
channel sharing strategy. If it were modified to be DAMA, we'd
have something very robust capable of supporting many stations
on the same channel. As it is now, it is a good non-shared
channel digital method, but we don't have the bandwidth to waste
at HF to stick to that method for the bulk of digital networking
operations.

The FCC's book is useful in one important regard -- it will help your neighbor understand the difference between transmitter-caused interference and consumer-equipment caused interference. The ARRL also has an "RFI Pamphlet," available from the Technical Department Secretary for an SASE that says the same things (surprise!), but having it said in the FCC's own words often carries more weight with your neighbor. The book is called "Interference to Home Electronic Entertainment Equipment Handbook (CIB-2)." It is available for $2.50 from: (I ordered it by name with no difficulty.)

US Government Printing Office
Washington, DC 20402-9371
Phone: 202-783-3238
202-512-1800 (credit card orders only)
Web Site: http://www.gpo.gov

ARRL also has several interference packages that will offer some fast starter help. Most are available electronically from the ARRL area at oak.oakland.edu or from info@arrl.org. Paper copies are available from our Technical Department Secretary for $2.00 for ARRL Members, $4.00 for non members.

We have the "RFI Pacakge," RFI-Telephone, RFI-TV, RFI-Audio, RFI-Electrical and RFI-CATV. The CATV package is available ONLY in paper form; it is a reprint of an article I wrote for Communications Technology, the journal of the Society of Cable Television Engineers. (I chose that instead of QST because I wanted something hams could hand to their cable operator. They trust CT more than they trust QST, for some reason. :-)).

Our RFI book, Radio Frequency Interference is available from most ham dealers, our Pub Sales Department, using the handy-dandy order form in QST. If you are an ARRL Member, you can get a bit of technical advice before you buy the book by calling us at (860) 594-0214.

As a matter of fact, most other nations that are members of the International Maritime Organization (IMO) have already done so. It would seem that the FCC is the Johnny-come-lately with respect to the fitting of ships in compliance with the SOLAS provisions regarding GMDSS.

By the way, as of 1 Feb 99, when a foreign-flagged convention ship, arrives in a port of another nation, in accordance with the Port-State Control treaty, the administration is empowered to delay the sailing of that ship until such time as it is in compliance with the IMO and ITU regulations with respect to GMDSS. Correct me if I am wrong, however, that it is the Department of Commerce which ensures compliance to the GMDSS provisions as stipulated by the FCC.

>But to REQUIRE proficiency in CW?? Why not Packet? SSTV? or indeed any other
>SPECIALISED mode which is part of this extensive hobby?

I think the issue for many of us is that cw is intelligable without an
interveaning technology required to translate it. For many of us, hf
radio communication is not just a technology, but a craft, and utilizing
cw effectively (30+wpm) is an art. I use that speed as those who are comfortable
at that speed are able to appreciate the paraverbals of a fist that can
communicate more than just the words themselves. For the same reasons that
systhesized music (and don't get me wrong, a significant portion of my music
collection consists of Patrick Ohearn Andreas Vollenveider etc.) will never
replace the symphony, digital modes will never replace cw. While I have
no doubts as to their utility, I find them boring and sterile.

A no-code friend of mine suggests that cw should be encouraged, but not
required. It still seems to me that the best way to encourage it is
to require an minimum level of proficiency. But I may be wrong. Won't

be the first or last time.

Hello-

I am wondering why I need to ground my radio and power supply using a separate ground wire instead of using the the ground normally provided by a 3-plug AC connector? Wouldn't a separate ground create a ground referencing problem? I'm looking to understand what I need to do when I purchase my Power Supply this week and install my system over the weekend.

I will be using an IC 730 with the IC-PS15 Power Supply. Any help you can provide will be greatly appreciated.

>can provide will be greatly appreciated.

The power supply will have a third wire safety ground, but the radio
still will not. So you'll want to also give it a chassis ground
connection. It has a lug for that purpose. You could tie that to the
third wire connection of the outlet you use for the power supply.
That would give you ordinary electrical shock hazard protection.
(The DC negative lead won't serve because it isn't directly
connected to chassis either in the power supply or the radio.)

The problem is that the house electrical third wire ground won't
do much for you as lightning protection. The ground path is too
long, and has far too much inductance. You're also right to be
concerned about ground loops. They can be damaging.

The answer to both problems is to create an entrance panel that
serves as a shack ground window. This is a copper plate to which
every wire that enters or leaves your station is connected *before*
going on to connect to equipment in the station. The wires should
be either directly connected to the plate in the case of "grounds",
or via appropriate suppressors if the wire is nominally "hot". This
means coax, power wiring, telco wiring, etc. This plate becomes
your station "single point" and shorts any potential ground loops
entering your station.

This ground window is then connected as directly as possible,
using as low an inductance wiring method as possible (5 inch
wide smooth solid copper strap preferred, don't use braid), to a
good Earth ground connection. A single ground rod is generally
not a good Earth ground connection. I recomend a minimum of
4 rods, with a central rod surrounded by the other 3 arranged
around and connected to the central rod in star fashion. The rods
should be separated by at least twice the length of a single rod
from each other to avoid the charge saturation zones overlapping.

This is often a sufficient Earth connection where the water table
is high. In other areas where soil conductivity is poor, I'd add a
Ufer ground (rebar in concrete) at least 20 feet on a side, and/or
a bunch of buried radials to form a capacitive "plate" to couple
energy to Earth. Dirt is a pretty poor conductor, with most currents
conducted soil grain to soil grain by arcing across the grain boundaries.
So surge currents are most effectively conducted to Earth via capacitance,
with the Earth forming one plate of the capacitor.

This system will give you an effective lightning safety ground,
and incidentally it may also serve as a RF ground should you
need one, providing the connection between the ground window
and Earth is (very) short compared to a quarterwave at the highest
frequency you'll be operating. Note, you usually will *not* need
a RF ground unless you're trying to feed a long wire or other
grossly unbalanced type of antenna. Verticals should be worked
against a ground *at their base* and not a ground back at the
station. Dipoles and other balanced antennas don't require a
RF ground connection.

You'll have to be the judge of how much grounding you want to
do. I wouldn't sleep easy in thunderstorm country with a lesser
system than the one I've described. If you aren't willing to
put in an effective system, you might be better just letting
the station "float" with respect to Earth and religiously
disconnect (and separate) antenna downleads from your equipment
when you aren't operating. Note that word "separate", lightning
that has just traveled miles through open air isn't going to
be deterred by a few inches of separation. Give it a better
choice of path than jumping to your equipment, or you.

Gary

Yeah, I think he may have hit it on the head. Frankly, I was misled
by your comment that the audio sounded "harsh". I don't equate that
with high frequency rolloff, which I'd generally say sounded "muffled",
but core saturation could definitely give you that effect by generating
step harmonics.

>So this is all bad news, as it means the three pole filter isn't going

>like it might get very dense now! Oh, and trust the Amidon charts, not
>my Autek for inductance values (darn!). If I get distortion with air
>cores I'll try your resistor mod.

That's just a trick to dampen parasitic oscillations. If that isn't
what's happening, then it won't help. But I'd be concerned about
your minibox. It may allow a path for the RF to *bypass* your
filtering. Think about that a bit. Capacitance to and from the
box with respect to wires entering and leaving it may be bypassing
your chokes. I'd mount them out in the open, with the inductors
well separated to avoid mutual coupling.

>One additional question I raised with Jack: If this really is a differential
>mode RFI problem, is the stereo receiver's AC line likely to be providing
>a return path, and if so, should I try aggressively filtering it?
>I could put some very serious filtering in place on the AC feed before
>my violin strings sounded like power tools :-)

I'm still somewhat puzzled how you could have differential currents
on your speaker leads. Aren't they tightly paired? And didn't you
say that you still had the problem with the speaker wires disconnected
and using headphones (or was that someone else)? If you do have differential
currents, then by definition they are differential with respect to *each
other* and not to some third wire. However, I would certainly try a
common mode choke on the AC cord. It can't hurt.

Try using much smaller capacitors. If you short the leads of a 0.1 uF
disc cap, and measure it with a grid dip meter, you may see it resonate
as low as 5 MHz. Above it's self resonant freq, it acts more like a
inductor than a cap. A C value more like 0.001 may work much better
for you, and have less effect on the audio also.

>That's my 2 watts.

You're partially right when you mention expertise, but you miss the
boat when you start talking about "dedication" "hard work", and
"privilege". The purpose of licensing is to determine if the applicant
knows enough of the right things to operate legally, safely, and without
causing harm to others. It's not about "work", or "effort", or "dedication".
The government has no legitimate reason to care how hard or easy it is for
you to satisfy its concern that you know what they think you need to know
to be an amateur. All that matters is whether you can demonstrate that you
know what they want you to know. Getting sidetracked with "effort" arguments
is just disguised hair shirt religious belief, and has no place in secular
government licensing of access to the public's spectrum, by members of
that public.

When discussing licensing requirements, we need to restrict ourselves
to determining the relevance of requirements, the validity of the
way they are tested, and whether the level of knowledge required is
sufficient to meet legitimate government concerns for the maintenance
of safe and orderly usage of public spectrum. No more, no less.

As response to Bob, I think deletion of Morse testing for non-Morse
operation is clearly warranted today (and redundant for those doing

Morse operation). But in the same breath I would add that I don't think current testing (even including a Morse test) is *sufficient* to adequately address various legitimate government concerns. It's not that I want to make the exams "tougher" per se, but rather that I want them to address relevant issues adequately regardless of the level of "effort" that may require on the part of an applicant.

For someone who barely comprehends bonehead English, and who barely realizes 1+1=2, the sort of exam I envision may indeed be "tough". But for someone fluent enough in (bureaucratic) English to understand Part 97, and with a moderately technical background in mathematics and physics, the exam may be trivially easy. What matters is that they can demonstrate the knowledge required to meet legitimate government concerns. No more, no less.

And further, in regard to "no more, no less", I can find no legitimate regulatory purpose for differentiating the level of knowledge required for activities of like kind, IE there is no difference in operation on 14.174 MHz from operation on 14.176 MHz that requires a different level of knowledge by the operator. Operators on either frequency need to know the same things to operate safely and without harm to others, no more, no less. Such artificial use of "privilege" is illegitimate on its face and contrary to equality and equity under law.

If a series of license classes is desirable (and I'm not necessarily saying that it is) then at the very least the knowledge tested and the access granted should be relevantly related. There may be legitimate reasons for differentiation based on power level, or on mode usage, etc but the current system of artificial divisions based on sub-bands is bogus on its face.

I have a Lightningbolt 2-element 5-band (10-12-15-17-20) quad up 50 feet,
and it does a great job. I was doing a demo for some non-ham friends
last Labor Day, and came across a RTTY signal. I flipped on my Kam+,
and it was a CQ with a UTxxx callsign (Ukraine)! So I answered back,
and we chatted via RTTY for 20 minutes or so.

BTW, my rig is a 100-watt FT-890/AT.

No complaints. Yes, it's surrounded by 70-foot trees.
Yes, it's next-to-invisible to the neighbors.

Dear Jonathan,

You really should just post your questions. This is the newsgroup
for ham radio discussion. Removing novice questions from this
newsgroup will only reduce the usefulness of this nesgroup to the
general amateur radio community. I strongly believe that both
novice and advanced knowledge should be present in this newsgroup.

The question posters are the most important element of an active
newsgroup because it is they who bring out the answers and knowledge.
I strongly encourage you to post and make your contribution to the
newsgroup. You are not the only one who learn.

Now if you actually post, you might be flamed. Ignore them. Don't
give up the newsgroup because of that, just like you don't throw
away New York Times just because you don't like the classified ads.

73,

Alfred Lee alf@kaiwan.com

> JM(VA3 OCH)

Back in the "good old days" there was more genuine use for Morse,
IE it had considerable advantages over other methods then in use.
Those advantages have dwindled dramatically in the last few years
to the point where the disadvantages of the mode outweigh its
advantages.

But the lack of time argument you advance rings rather hollow. If you
expect to have the time to *operate* HF over the course of your lifetime,
surely you can find a bit of time *once* to program the wetware to pass
the Morse test in order to do so. Sure, you may think it is hazing, sure
you may consider it a waste of time, and you arguably could be right,
but you can start to forget it the instant you pass your test, and the
brain damage need not be permanent. You must weigh the time wasted
against the time you'll spend operating on HF over the course of your
lifetime. I'd suggest the scale will not balance, but will overwelmingly
favor going ahead and getting the HF license.

There are rational reasons which can be advanced to show that Morse
speed testing is no longer a useful licensing requirement. But lack
of time isn't a good one. If your time is really that short, then
you won't have time to *operate* HF either, so the point is moot.

>All I hear is a hollow echo.

That's coming from that empty space between your ears, Jay. :-)

At least in this area, we've seen a good number of new Techs who are experimenters and doers. In fact, they have in several cases assumed leading roles here, surpassing the old line amateurs who were in the forefront once upon a time. Many of them only considered entering amateur radio after the code test (which they considered irrelevant) was removed. Some have now changed their minds about the relevance of code as an operational method (but not as test element), others have not, but still they contribute, and quite substantially too.

We've seen substantial leadership by the code test free in our networking efforts, including one of them becoming president of our state networking organization. We've seen the code test free take leading roles in repeater linking efforts. We have a few of the code test free taking leading positions in DSP and SS, and even teaching some of us old codgers how to do it. We've seen real revitalization in some of our clubs, thanks to the code test free, with more *active* memberships and more activities (such as foxhunts) being organized and driven by the code test free. Etc.

We've gotten our share of "autopatch hams" too, of course. But we had them before. What we haven't seen is a substantial number of new troublemakers (most of them have been around a while and seem to disproportionately hold Extra calls). But we have gained some new DFers to track those old drunks down faster.

I agree with everything you've said so far. I believe (absolutely no facts to substantiate this--just anecdotal evidence) the hobby is in trouble. Have you paid attention to what's happening in D.C.? They're auctioning off frequencies. Companies are willing to pay BIG buck for these frequencies -- they're really in demand! If we don't do something to "grow" the hobby, then we're going to lose either all or part of some bands --for certain!
I'm a high school teacher (actually spend most of my time "troubleshooting computer problems in the district) and most kids I meet have no idea (as do most adults) what "Ham Radio" is (I get questions asking just that when they see my ham license plate, club poster or "Yaesu" sticker on my computer). On the other hand ALL of my students know what the Internet is and they are *almost* all interested in getting on it. BTW I've had the club poster displayed for almost three years. Want to guess how many inquiries I've had from this (admittedly passive) "recruiting device"? None. Our club also has a scholarship for licensed hams. In a school of 1300 students -- one applicant in the last three years (the only other ham besides myself!).

Some time ago in QSL magazine some "wag" made the observation that you could hand out free Extra Class licenses at any football stadium (or similar public place -- eg. shopping mall) and 99 of 100 people would ask, "what's this for". The other person who knows what it actually is probably wouldn't be interested. Sorry to sound so negative, but I really feel this is reality today.

The code used to be a "rite-of-passage" to keep the unwashed hordes away. Guess what folks? The heathens have packed up and gone home -- they're no longer beating down the gates!

Should we still have entry requirements for different levels? YES! Here's an opportunity to take the existing exams and make them tougher! Put in some real life role-playing situations like, "What would you do if...? Make the exams more pertinant to real, everyday operating situations. BTW, memorizing band frequencies is something that most of us do without thinking as we work them--or refer to a poster on the wall!

To those who think I'm trying to "dumb-down" or "dilute" the hobby, I say, once again, make the practical and theoretical part of the exams tougher! Code is not the ONLY method of keeping those hordes at bay!

Hi Jay (and everyone else),

I guess most of us who use ARRL tapes to learn the code run into this problem. I hit the 10 WPM wall and it only took perserverence to get through it. It also took the help of another ham. Actual on-air QSOs helped me get above and beyond.

With the help of KQ5I (now known as AA4GZ) who would hunt me down whenever I was using the 80 meter Novice band back in 1982, my speed went up to 20 WPM and above in a pretty short time.

I would make a contact with someone at a nice comfortable speed for me. As soon as the QSO was finished I would hear, "KA5MWD DE KQ5I" At first I dreaded it because Bill would get me into a QSO and after a few minutes I would find myself sweating and asking him to QRS.

After a couple of months of this the QRS speed was getting faster and faster. At first it was QRS down to 10 WPM then (and happened suddenly) it was QRS down to 13 WPM. When I busted that 13 WPM barrier it really was sudden. It was like, "WOW...I couldn't copy this before? Peshaw..."

Each of us "experienced" folk has/had our own unique method. You will choose one too that will work for you. You will hear from many people and you will receive many suggestions/ideas...and some combination of those will be the method that will work for you.

But, the bottom line is this, Don't give up. As Gene Shepard (those of us who did the ARRL Intro to Morse Code are familiar with this) would say, "Hehehehe concentrate [pause] concentrate."

Good luck. Hope to work you sometime

pish posh and tish tosh

you should know better. code keeps people off HF, not the commercially attractive VHF/UHF bands.

I'd worry about those 1st and not HF.

Now if we could only convince the 2 of you to sell you computers.....

No code or Know code....only ur hare dresser nose four shure

ESPECIALLY now, with the widespread availability of computers (and
Morse code practice programs) and the relaxing of the code requirement.

Code requirement relaxed? Yes, the multiple choice code tests,etc.
now available represent a loosening of the code requirement. I passed
the Novice test in 1968, the General & Advanced in 1970 and Extra in
1995. In the "olden days", you had to have one minute of absolute SOLID
copy... miss one letter, start over. I have to travel approx.
150 miles to take the test, and if I didn't pass on the "first
try", went home with nothing and couldn't take the test again for a
month (like I could travel the 150 miles or more immediately the
next month, especially since I was 15 years old when I passed
General). This is pressure!

For Novice practice, I had no suitable receiver and no cassette
player (I got my first cassette recorder/player in 1969 and it
cost $100 then, approx. $400 of today's dollarettes). Today, my
computer can give me limitless random practice and limitless
"practice tests".

You can take the test 3 times in one sitting, usually close to where
you live. I passed the 20 wpm(?) test at a regular meeting of the local
Raleigh Amateur Radio Society. If you fail, often the test will given
somewhere else close by within a week or so (and I say this as a resident
of a medium sized "city" in a relatively rural state).

With the multiple choice test, you don't even have to copy the required
item perfectly to correctly answer the question.

e.g.
==========
You copy "N-me is Ric--rd"

QUESTION:
"The operator's name was:

a) Ronald b) Timothy c) Richard d) Ricardo e) Anthony
==========

If you don't copy ANYTHING you have a 20% chance of getting it right.
Pretty tough, huh?

I passed the 20 wpm exam on my first sitting and scored 100% on
the test (I absolutely, positively and totally lucked out on one
question). Realistically, I'd say my real code speed proficiency
(measured the "old" way) was more like 15 wpm.

So it's never been easier than it is now, even for the "higher"
license classes.

5568. GB2RS News 21st April 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-18 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <829885258snx@llondel.demon.co.uk>
Source record: 227417
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 21st of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Annual General Meeting of the Worked All Britain Awards Group will be held at the Drayton Manor Rally on the 12th of May. WAB members wishing to make nominations for the committee or proposals for the agenda may request the appropriate forms from G1NUS, whose address is correct in the RSGB Call Book. The forms must be returned by the 27th of April.

The Morse Enthusiasts Group Scotland, "MEGS", will be holding a Samuel Morse birthday party on Saturday the 27th of April. A special event station will use the callsigns GB4SAM and GM0RSE, and will be active, using CW of course, on 20, 40 and 80 metres. The location is the Auchengillan Scout Camp near Drymen, just north of Glasgow. Visitors are very welcome and talk-in will be provided on 2 metres channel S22.

Today, the 21st of April, sees the worldwide launch of 'Project Argus', a full-sky survey organised by SETI, the Search for Extra Terrestrial Intelligence. Radio amateurs, microwave enthusiasts and amateur radio-astronomers are switching on their radio telescopes for the largest and longest search yet of the skies for intelligent life. To mark the occasion, the SETI League in New Jersey is operating special event station WA2IKL for one day only from 1600UTC today. For more information on SETI, see the December 95 RadCom, or write to the UK coordinators G0ECP or G4KIR, enclosing a large SAE. Both addresses are correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Cocos Island, a Japanese and Costa Rican group will sign TI9X on HF and TE9RLI on satellite from the 26th of April until the 4th of May. Look for them on CW and SSB on all bands 160 to 10 metres, and QSL to JH1NBN.

From Jan Mayen island, LA7DFA was planning to sign JX7DFA from the 13th of April until October this year. Look for him on RTTY and on 160 metres, and QSL to LA7DFA.

And from New Caledonia, F6EYG is active as FK8DH from now until the 4th of May.

Next the Rally News:

The White Rose Amateur Radio Society Rally takes place at Leeds University Conference Centre today, Sunday the 21st of April. The event features an RSGB bookstall and membership information stand and Morse tests on demand. Doors open at 11.00am or 10.15am for disabled visitors.

Also today, the 21st, the Microwave Round Table takes place at the Rutherford Appleton Laboratory in Chilton, near Didcot, Oxfordshire. The event features comprehensive test equipment to 24 GHz and above, lectures, a discussion meeting, and a bring and buy stand. Doors open at 10.00am.

The Lough Erne Amateur Radio Club rally takes place in the Killyhelvin Hotel in Enniskillen on Sunday the 21st. Doors open at 12 noon.

The Dunkerque Rally takes place in the Kursaal, Dunkerque, on Sunday the 21st. The location is convenient for visitors from France, Belgium, the Netherlands and Germany, and is easily accessible by car from Calais. The event features many UK and European dealers. Doors open at 10.00am.

Next Saturday, the 27th of April, the Greater Scout Group and West of Scotland Amateur Radio Society Rally takes place at the Auchengillan Scout Camp on the A809 Glasgow to Drymen road. Talk-in will be on 2 metres channel S22. For further details call 0141 634 4567.

Also on Saturday the 27th, the Isle of Wight Wireless Museum will be celebrating Marconi's birthday with a special exhibition of early Marconi equipment. Special event station GB3WM will also be on the air. The location is Puckpool Park, Seaview, on the Isle of Wight, and doors open at 10.00am. Further details from Douglas Byrne, G3KPO, on 01983 567665.

Next Sunday, the 28th of April, the Marske-by-the-Sea radio rally takes place at the Marske Leisure Centre, in the High Street in Marske-by-the-Sea, near Redcar. The event features the usual traders and a bring and buy stand. Doors open at 11.00am and further details may be obtained from Alistair, G4OLK, on 01642 475671.

The BATC Rally takes place at the Sports Connexion in Coventry next Sunday the 28th. The event features outside broadcast TV displays, traders and a bring and buy stand. Doors open at 10.00am, or 9.30am for disabled visitors. For further details call Mike, G6IQM, on 01788 890365.

The Prestige Events Computer Fair takes place next Sunday, the 28th, at Burgess Hall, St Ivo Centre, St Ives, in Cambridgeshire, with doors opening at 10.00am. For further details, call 01767 682822.

The Bletchley 10 GHz amateur TV repeater, GB3TG, which operates on channel RT10-3, returned to service earlier this month. It had been off the air since September due to refurbishment work at the repeater site.

Now for the HF contest news:

The RSGB Low Power Fixed Station contest is taking place on 80 and 40 metres today, Sunday, the 21st, from 0700 to 1100 UTC. The rules are in

last September's RadCom.

The Holyland DX CW and SSB Contest is taking place this weekend, the 20th and 21st of April. Brief rules are on page 21 of the April RadCom.

The fourth of five sessions in the RSGB Slow Speed Cumulative Contest takes place on Thursday evening, the 25th of April, from 1900 until 2030 UTC. Send CW no faster than 12 words per minute - and never faster than the other station is sending - between 3540 and 3580 kHz. Novices are particularly encouraged to take part. The rules are in September's RadCom.

Next weekend, the 27th and 28th of April, the Helvetia Contest takes place from 1300 UTC Saturday for 24 hours. Operation is on both CW and SSB and brief rules are on page 21 of the April RadCom.

And we have no information on any VHF contests either this or next weekend.

The solar factual data, as broadcast on GB2RS, will be in slightly abbreviated form starting this week. The complete data will still be available on the UK packet network. For those who require the complete data, but have no access to packet, Neil Clarke, G0CAS, who compiles the data for GB2RS, has kindly agreed to provide the information on an individual basis.

And now the solar factual data for the period from the 8th to the 14th of April:

Solar flux levels remained steady and averaged 69 units. This is the first weekly average below 70 since the last minimum in 1986. The 90-day solar flux average on the 14th was 71 units. The X-Ray flux remained at A1 units. Geomagnetic activity increased from "quiet" levels on the 8th, with an Ap index of 4 units, to "active" levels by the 12th and 14th, with an Ap of 24 and 27 units respectively. The average was Ap 13 units. No aa indices data were received from the British Geological Survey.

Now the ionospheric data as recorded in Central France. The period from the 5th to the 11th of April saw the F2 daytime critical frequency increase from 5.6MHz on the 5th to 7.5MHz by the 10th, but then collapse to 5.7MHz the following day. The average for the period was 6.4MHz. The darkness hour lows also increased, and peaked at 3.1MHz on the 8th, declining to 2.3MHz on the 10th. The average was 2.7MHz. The daytime highs took place between 1600 and 1900 hours every day except on the 11th, when they were at 1100 hours. The darkness hour lows took place between 0400 and 0500 hours.

And lastly the solar forecast. This week the slightly more active side of the sun will be rotating away, so solar activity is expected to remain at very low levels. The solar flux is expected to decline to the high 60s. Geomagnetic activity is expected to decline from "unsettled" levels to "quiet" levels from midweek onwards. Ionospheric MUFs during daylight hours are expected to be about 17MHz for the south and 15MHz

for the north. The darkness hour lows are expected to be about 11MHz. The peak of the April Lyrid meteor shower is expected to take place today and tomorrow.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Bravo and M1 Alfa Alfa series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Echo Whiskey series.

>>wont ever know. Stay on FM or SSB, PLEASE!

But there are only two CW exclusive bands that I am aware
of and no-code techs have full access to both of them without
having taken any CW entrance exam.

Those bands are: 50.0-50.1 and 144.0-144.1.

Every other band that includes CW as an allowed
mode does so on a shared basis with one or more
other modes.

Okay kids, settle down now. Alan was close. but Clark got the
prize. Clark should be getting his free ticket Real Soon Now...

Patterned after the military record traffic message precedences, the
call precedences in AUTOVON are Routine (no distinction, often got
cut off) Priority, Immediate, Flash, and Flash-Override.

As I recall it, the only folks who used the FO button were the
technicians who wanted to talk back to the World from Out-backistan
or wherever they were. Sure beat the orderwire...but maybe I'm
remembering it wrong.

5573. Amplifying AM signal with Op Amp?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-18 00:00:00 UTC
From: John Young Oh <jyo@acpub.duke.edu>
Message-ID: <Pine.SOL.3.91.960418193944.19863A-100000@hudson17.acpub.duke.edu>
Source record: 227422

Hello, I am working on a simple radio circuit for an EE project and I have most of the circuit working except for the amplification stages. What I am doing is using a simple non-inverting amplifier with an 072 OpAmp to amplify the amplitude-modulated signal. For some reason, when I try to amplify the signal, the amplified AM signal appears on the oscilloscope, and then dies out. Moreover, the DC offset shoots up, and then shoots down. I am wondering if the problem is with the op amp itself. I noticed that the 072 OpAmp can not handle high frequencies like the carrier wave. Will I need a better op amp to handle such a signal? My carrier wave frequency is 277 kHz by the way and the amplitude when I put it into the input is 100 mV p-p. The output dies out like I said even when the input signal is still present.

One other question deals with the filter. I am going to use a bandpass filter to remove noise and have the bandpass center around 277 kHz. Will this remove the signal that is "riding" on the carrier wave because it has a frequency that is much smaller than 277 kHz?

-Thanks

John Oh

Of course, you could argue that there are almost NO exclusive bands for any mode, since with a few exceptions, the band plans are determined by the ARRL and not the FCC (or the equivalent in other nations). Thus, they are more of a "gentleman's agreement" than anything else. No, this doesn't mean I advocate working FM on 144.05 or SSB on 3600, just throwing the fact out there.

To all radio amateurs

SB DX ARL ARLD020
ARLD020 DX news

This week's bulletin was made possible with info provided by Walt, G3NYY, Mauro, I1JQJ, Jim, VK1FF/WB2FFY, Richard, G3NBB, Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

COCOS KEELING ISLAND, VK9C. This DXpedition will run from May 18 to 31, primarily on SSB. Team members include VK4FW aka VK4CRR, VK2IVK and VK4DHM. QSL via VK4FW.

MARSHALL ISLANDS, V7. Bob, WW1V, will sign V73W May 2 to 14, mostly on SSB but he will do some CW. Bob will concentrate on 40 meters. QSL via WW1V.

GIBRALTAR, ZB2. G3RFX is QRV as ZB2FX between April 10 and May 1. QSL via home call.

GALAPAGOS ISLANDS, HC8. Listen for DF1VU, DL4VCG and DK5VP signing home calls/HC8 from April 21 to May 10. Most operations will be between 1400 and 1800z on 40 through 10 meters. QSL via home calls.

SEYCHELLES, S7. Seiji, JH6RTO, plans to be active April 29 to May 5 as S79SF. QSL via JH6RTO.

NAMIBIA, V5. Charlie, KY0A, will sign V5/ZS6YG during July and August. He will operate mostly mobile from northern Namibia running 500 watts from his van. Only QSL via KY0A. No cards to the ZS bureau, please.

ASCENSION ISLAND, ZD8. Des, G0DEZ, will sign ZD8DEZ from late May until year end 1996. He will operate primarily CW with some RTTY and SSB. QSL to G0DEZ direct or via the bureau. Please do not send cards to Ascension Island.

BARBADOS, 8P. Listen for David, VE3VET, and Joe, VE3BW, signing 8P9IJ and 8P9IK, respectively, from April 20 to 27. QSL via home

calls. Bernd, DJ1TO, and Baerbel, DL7UTO, will be active April 24 to May 6 as 8P9IR and 8P9IU.

GRENADA, J3. J37Q and J37P will be active on the bottom end of 20 meters April 25 to May 7, mainly in the early evening hours their local time.

SAINT LUCIA, J6. After they leave Martinique, Bruno, F5JYD, and Eric, F5SSM, might stop and operate from J6.

PIRATES COVE. 9K2EC reports someone using his call on 80 meter SSB. 9K2EC has no 80 meter antenna and rarely works phone.

THIS WEEKEND ON THE RADIO. Rules for the EU Spring Sprint appears on page 109 in April QST.

>but core saturation could definitely give you that effect by generating
>step harmonics.
>

Be careful here fella's. Core saturation would NOT produce noticable distortion. Forget about that.

The effect of core saturation is the inductance of the core decreases rapidly, it's like the fux increase becomes the same as with an air core, rather than by the permeability of the material at the operating frequency.

Since the inductance of the cores should be negligible at audio frequencies, and distortion caused by core saturation would also be negligible. The effect will be only that of adding a non-linear inductance in series with the audio path, of an inductance value that has no affect on the audio frequency signals anyway.

Core saturation is a moot point unless the design impedance or application of the inductors is far from correct, so an air core coil of the same impedance will produce the same results.

Look for instability in the amp caused by the load change, and lower the values of those .1 caps.

Why not get ahold of K1FO i.e. Lunar Amps. He has 432 amp kits and complete amps for sale. Also if you look in the ARRL UHF/Microwave projects manual a few types of legal limit amps are shown.

>
> The cop has it reversed. Much of the commercial HAM gear is NOT type
> accepted. I think only commercial HF linear's require any sort of
> acceptance. Home brew linears do not.

The reality is ham gear especially receivers that operate above 30 Mhz must pass FCC Part 15 for receiver
radiation. The Amateur transmitter is not checked by the FCC for anything. The transmitter must only comply
with the regulations set forth in FCC CFR Part 97 technical standards. Most all Amateur receivers that operate
above 30 Mhz and that can scan are actually type acepped as scanning receivers. If you approach an FCC
inspector and he is not quite up on the rules he will have a difficult time understanding just how a scanning
receiver can transmit. Until you remind him about the Part 15 Type acceptance. Your are correct the only
piece of Amateur gear in the H.F. operation region that must pass type acceptance is the Linear Amplifier.
This is to be sure it will not operate in the 24 to 28 MHz range. The HF transmitter again is not tested and
only must comply with FCC CFR Part 97 technical standards. NOW there is also a Letter of Intent amateur
manfacturers must comply with, this letter does not appear in the FCC CFR rules though. It simply says an
amateur manfacturer must not advertise or sell an amateur radio with the intent it be operated in another
service that requires a Type Accepted radio. This is how KenWood got into trouble a couple years back as they
advertised the TS-50 would transmit at 27.5 Mhz on the brochure, the radio still transmits there out of the
box, they are bound by the letter of intent not to advertise this though or they are subject to a fine as are
all manufactuers of amateur transmiters. Did you know the FCC is notified of the actual numbers of amateur
equipment models imported each year by the manufacturers. They only care about the total numbers, not serial
numbers or where they were sold. This Amateur type acceptance gets pretty interesting.

> On the other hand, converting non type accepted HAM gear for use on
> commercial frequencies is NOT permitted...

Quite correct, Letter of Intent previls here also the transmitter is considered an unlicensed transmitter, as
the transmitter does not meet the Type Acceptance standards for the service it was modified

to be used in. So
it could not possiably be licensed for operation in that service. So what happens is the unsuspecting user
gets nailed for operation of an unlicensed transmitter.

The Colorado Amateur Radio Page at http://www.rmsd.com/hamradio/ has
a list of all allocated repeaters in Colorado. This is one of the few
repeater lists on the Internet provided by the area frequency
coordinator.

For active repeaters in the Denver area, see the CRA Web Page (URL below).

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 APRIL AND FORECAST FOR 19 APRIL - 21 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 17 Apr
Daily Proton Fluence >1 MeV: 1.2E+07
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.9E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Apr 20 Apr 21 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 17 Apr
Learmonth 18 3434 4233
Fredericksburg 20 30
Planetary 25 27

Observed Kp for 17 Apr: 5534 3534

2B. MAGNETIC FORECAST
Date Ap Conditions
19 Apr 20 Unsettled
20 Apr 15 Unsettled
21 Apr 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
18 Apr Normal Normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
19 Apr Normal Fair Poor
20 Apr Normal Normal Fair
21 Apr Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
18 Apr 2

Observed Australian Regional MUFs:
Darwin and Townsville: Near predicted monthly values with
spread F observed during local night.
Sydney: Depressed up to 15% for period 04-09 UT, otherwise
near predicted monthly values.
Canberra: Depressed 15 to 30% for period 04-09 UT,
otherwise near predicted monthly values.
Spread F and Sporadic E observed during local night at
Sydney and Canberra.
Hobart: Depressed 30% from 00 UT, recovering to near
predicted monthly values around 12 UT.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
19 Apr 5 near predicted monthly values
20 Apr 5 near predicted monthly values
21 Apr 10 near predicted monthly values
COMMENT: IPS HF Communications Warning 13 was issued on 18 April
and is current for interval 19 April only. Magnetic activity
persisting longer than expected producing degraded HF comms for
southern regions longer than predicted. This is expected to continue
for today with MUF's depressed up to 30% for southern regions
for the period 00 - 08 UT.

> Three is such a ticket as the "Codeless" General. It is really classified as a
> "Conditional" ticket. The VE is required to accept the FCC 610 Form when
> properly completed by a physicain attesting to the handicapped condition which
> precludes an aplicant from successfully completing the exam requirements. ARRL
> policy to VE teams is to accept the application and submit any suspicions
> concerning the validity of the situation with the rest of the test package
> when returned.

Unfortunatly, the message above is inccorect. There is not now, nor
has there ever been a conditional ticket. You must pass the five.

I have also read here that VE can not arbitrarily set requirements.
It is true that they can do nothing in direct conflict with the
regulations but the regulations say nothing as to how to determine if
the applicant can copy at the perscribed speed. Most VE's got to the
solid copy method if you don't answere all the questions right. i.e.
25 in a row for 5, 65 for 13 and 100 for 20. You can find this
nowhere in part 97 but everyone accepts it.

Now to the question that originaly started this thread. If your
friend can pas the written, chances are he can pass the code. The
code requires no real brain power, it's just a matter of repition.
Were I one of those who have very severe disabilities but still work
at learning the code I would be appalled. While a VE may not deny,
they can suggest that the VEC check into it further by documenting
their concerns and sending it along with the paperwork.

For the record, I think the current structure of code testing should
be greatly modified. I am not a code fanatic nor am I one who feels
the code shoul;d be done away with. It a fun way of communicating and
those who take the time to learn it deserve the credit they recieve.
To many people are looking for the easy way out.

>From: hayward@cs.uchicago.edu (Kristin Rachael Hayward)
>Subject: Re: Code speed wall solution?
>Date: Mon, 15 Apr 1996 15:39:26 GMT

does anyone here have any practical suggestions for getting past a
>:wall I've hit? For whatever psychological or brain-wiring reasons, I
>:have not been able to improve much beyond 11 wpm for about 2 weeks now,
>::

I've taught (and still do teach) Morse, and have seen this many times. It used to be called "The Psychological Pause" (Wireless World June 1941, p 162).

Let me quote a little part of it (and remember, it's 1941- hence the quaint English);

".....and there is little doubt that it is due to a quarrel between the concious and the subconcious minds. The bossy concious worries; "I can't get it... What was that letter?... Oh, I am making a mess of it......This will never do, it's worse than last time" ; and the squashed subconcious cannot make heard its gentle; "Let me alone, I'm getting it all right..Oh, do let me alone!" ".

Some of the main points made in the article (and I agree), are;

-try to relax, very little progress can be made if you're "uptight".

-try not to concentrate too hard on a difficult letter; let the "automatic" part of your brain do the work.

-don't let yourself be thrown by a missed letter, just put a dot, then carry on.

-use the "context" of the correcly copied material to give you clues (this comes later).

-Don't practice when you are tired; this is counter-productive.

-Adopt regular practice habits, every day, every two days- whatever, try to stick to it as far as possible. Frequent short sessions are much better than infrequent long sessions.

-Don't worry, you will break through the barrier, just work away at it like you would tackle any other worthwhile job (what's that little quote I hear in some American movies- "when the going gets tough, the tough get going" (or something like that). Another one I like is "if you never quit- you can't be beaten"

73, Kind Regards, Drew, VK3XU.

>PA3BTL, Henk van Asselt

The numeral corresponds to the call area that you will be operating in.
W1 or N1 or K1 can be used here in Massachusetts. W4 is southern US like
Florida South Carolina, etc.

Someone correct me if I am wrong, but contrary to other countries, here in
the US, the prefix FOLLOWS your callsign. i.e PA3BTL/W1

The cop has it reversed. Much of the commercial HAM gear is NOT type accepted. I think only commercial HF linear's require any sort of acceptance. Home brew linears do not.

On the other hand, converting non type accepted HAM gear for use on commercial frequencies is NOT permitted...

>jay@usa.net

Start fast and work down. I got from barely 5WPM to passing the 20WPM test in 2 months of daily practice. I would hit the "high speed" nights and try copying 25 and 30 wpm. I could only catch a word or two here or there, but when 15wpm came around, it sounded SLOW...The 18wpm bulletins are also great practice.

P.S. After two months of nightly practive, my wife threatened divorce if I didn't pass! I went to the test with the expectation of passing 13WPM and got certified for 20 instead!

Hi Mike,
Thanks for your comments, Like I said it was my first visit to the
group, I just wondered what a potential amateur might think? Seems a
shame to give them the wrong impression.

(Demon said they had already spent it) :-)

Now you're on the right track. The issue is not the CW but is really an argument about the entitlement of anyone to use the amateur radio frequencies without any accounting for expertise or dedication to hard work for the privilege of obtaining a license. If there were
no CW then the argument would switch to a bunch of people who think they shouldn't have to learn the math to do simple circuit analysis or some other hated thing. We need to decide what
level of expertise or ability should be required to obtain the privilege of an amateur radio
license and stick to the subject.
That's my 2 watts.

In response to Gary Coffman, who writes:

>Part 97.1 declares that *a* goal of the amateur service is
>technical advancement, ...so while *one* goal of 97.1 is of a
technical nature, the rest are not.

Incorrect. Part 97.1 declares that amateur radio is a technical hobby in THREE of its five acclamations. Besides the one you just stated, two others are directly related to technical advancement. To quote:

Part 97.1
(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

(c) Encouragement and improvement of the amateur radio service through rules which provide for advancing skills in both the communication and TECHNICAL phases of the art.

(d) Expansion of the existing reservoir within the amateur service of trained operators, TECHNICIANS, and ELECTRONICS EXPERTS.

In short, technical expertise accounts for three of the five acclamations in Part 97.1, with international good will and public service being the other two. Three out of five carries majority weight, clearly defining ham radio as mainly a technical pursuit.

>> Meanwhile, as we've deregulated, we've lost frequency
>> allocation (see Amateur Radio Spectrum Protection Act).
>> Keeping our frequencies is indeed a serious issue. And
>> amateurs should do all they can to find out what they need to
>> do to keep them.

>Indeed. And there are only two spendable political currencies
>that can affect that, numbers and money. Since amateur radio
>cannot hope to compete financially with big business interests,
>we must depend on grassroots numbers and activism to maintain
>our status. We cannot hope to hold on to spectrum we do not
>occupy. We must fill it or fully expect to lose it to someone
>who will. If every amateur had been a 20 WPM brass pounder
>when we lost 220-222 MHz, we would have still lost it unless
>those amateurs were *using* 220-222 MHz at the time.

The amateur community is now quite well aware of why we lost 220 MHz, and it had little to do with occupying frequencies.

One can see today that 220 MHz is scarcely better occupied by the commercials. The numbers argument is one that is advanced by the Commission selectively, as it sees fit. Even Congress found fault with how 220 MHz was reclaimed by the Commission, but that is another issue. As for money, amateurs also understand, based on Ray Kowalski's statements almost two years ago in Westlink Report, that commerical interests are not happy with sales of their HF communications equipment, and an HF no code license would do wonders to help that situation.

>> That means finding out from FCC/ARRL in no-nonsense fashion if
>> the Service yet needs to justify its frequency allocation as
>> a technical hobby, or if citizens have a Constitutional right
>> to these frequencies, free of government intervention.

>In fact, neither and both of these positions apply.

I regret that the above is a classic case of doublespeak, Gary. Say what you mean, please.

>You cut things as if there were only two either/or choices, and
>that only those two *particular* choices are available. That's
>not true.

It is not a question of _choice_, but of finding out where we stand with the powers that be. Thus, we either are a technical hobby, as specified in Part 97.1, or we're not. The FCC states that we are, but they continue to deregulate. That's a confusing scenario, and few understand it. It's time for clarification.

>*One* of the goals of the amateur service is technical
>advancement of the art, but it is only one.

Wrong. Again, THREE of the goals of the amateur service are related to technical advancement. One states it specifically, two state it in a basically direct fashion.

>Not every amateur, nor every amateur activity must be oriented
>to advancing the technical art. There are other
>purposes to fullfill for those with less of a technical bent.

Less of a technical bent is fine. No technical bent is not acceptable, according to Part 97.1. Again, amateur radio is not for everyone.

>Those non-technical types, whose public service and emergency
>operations have garnered good press for the service, have helped
>to fullfill our charter and retain our spectrum too.

Three cheers for those who have contributed to public and emergency service (that includes us all, at one time or another). But a technical bent of some sort is still the main goal of Part 97.1. The Citizens Band service provides for public and emergency service as well. The

difference is on the technical side.

>People do have a right to access spectrum under the doctrine of
>the Common Heritage of Mankind, but that right is not unlimited
>and the government has a legitimate reason to license and
>regulate it just as they do for licensing and regulating the
>operation of a vehicle on the public roadway or the operation of
>a boat on a public waterway. Government is ceded the power to
>license and regulate our access and activities in these commons
>areas as a part of the social compact we've made to limit our
>right to property in these areas in order to maintain public
>safety and order.

Regardless of the issues of legitimacy, licensing, and
regulation, basically you are stating that people have a
constitutional right to their frequencies. That's all fine
and good, but it gets away from what the basis of amateur
radio is, the basis upon which we justify our frequencies
(see QST, April 1966, p. 26), and that is as a technical hobby.

>Incentive Licensing, that bastard child of 60s social
>engineering activism, is illegitimate in that regard.

Anger over Incentive Licensing is something you will have
to get over, and it might be best to take up that argument
with the Federal Courts. Keeping our technical expertise was the
basis of Incentive Licensing, as per the agreement forged between
FCC and ARRL in the 60s (again, see QST, April 1966, p. 26).
And Incentive Licensing was logically in line with the fact
that radio amateurs were not satisfying the provisions of
Part 97.1. See FCC Docket 15928.

>It attempts to corrupt the licensing process toward
>accomplishing other objectives than those ceded to the
>government for controlling public access to public property.

Again, the Constitutional rights theme is apparent in
your argument. But that's a question that has yet to be
answered, as I pointed out in my initial post (what you
call my 'either/or' _choice_, which is not a choice at
all). The question remains: must we yet indeed justify
our frequencies as a technical hobby, or is it a
constitutional right?

>You prattle about maintaining standards, Vince, but when pressed
>you really don't have a logic or rationale for what standards
>are either appropriate or proper for amateurs to maintain.

If I were indeed "prattling," you would not be wasting your
time (and poorly at that) addressing my arguments. As for
standards, over the past year I've provided precise and
voluminous postings on what would be considered appropriate
and proper. Indeed, the logic and rationale may well have

been sufficient to place your ideas in the minority view.

Regards,
Vince, WB2EZG

And has the church dropped their doctrine of trans-substantiation.
No. Do they now teach six sacraments instead of seven? No. Is
clerical celebacy now outdated and no longer church policy? No.
How about female ordinatio? No change. Can you get information
on birth control from your parish priest? I think not. Has the
church altered its teachings on the Trinity? Nope. Is abortion now
sanctioned by the Pope? Never.

Maybe hams should take notice of *that* (if they have nothing
better to do, like learn some code).

Dear Martin,

I am the author of HAM LOG 3 - the IBM computer program for amateurs to log their contacts. In its fifth year of development, Ham Log has been acclaimed world-wide.

It is a professional program that has a enormous facilities and functions, yet very simple to use. From the last review in The Canadian Amateur magazine:

"This is the first computer program I have in years that I really cannot find anything to improve on. With so many features, it is beyond this reviewer's ability to do it full justice. I rank it [Ham Log] as one of the 'breakthroughs' in computer technology applied to t his fine hobby, ranking with Baycom, JVFax and Hamcom."

In Amateur Radio Action (Dec. '94), the editor Len Shaw wrote:

"... the opinion of many, myself included, Ham Log is already the best such product on the market. In my position as editor, I get to see and use most logging programs at some time or other and from my first encounter with Ham Log, I have believed it to be the best available - and that includes some quite expensive American programs."

I'm certain you will be impressed with THE Ham Log v.3.1

Kind regards,

Robin Gandevia
rhg@ozemail.com.au | VK2VN@VK2OP.NSW.AUS.OC

Ham Log 3, the ultimate Ham Radio logging program, is currently available at the following FTP sites on the Internet. This is the functioning demonstration version.

oak.oakland.edu - /pub3/hamradio/dos/logging

I would. I get REAL tired of these 6-month Extras (and a few long-term Extras) telling me that because I'm not bothering with code, that there's something wrong with me. Some of these "blue-blood" fools don't know the first thing about fixing a radio.

I'd like to call an end to "appliance operators" myself, but I fear that tests will only get easier, not harder.

Another thing I'd like to add is that those out there who complain about the "lower standards" need to remember that the No-Code Tech license tests WERE THE SAME ONES that coded Techs had been taking for a few years. All the elimination of the code did to Ham Radio was point out where the REAL "lower standards" were all along.

I agree. What is it with some folks who lurk for a bit and then go off
in a high dudgeon leaving a resounding raspberry?
It seems to happen on a number of newsgroups.

I wonder if it is because they have read the hype about the
"superhighway" (barf), and struggle to get on it using Demon's
impossible free software, and then find it does not live up to their
(misplaced) expectations?

Like all things, (including amateur radio) the more you put in, the
more you get out.

>Have you tried asking Demon for your ten quid to be refunded?

OoooooH! Nasty! :-)

+>the Morse test in order to do so. Sure, you may think it is hazing, sure
+
+ ESPECIALLY now, with the widespread availability of computers (and
+Morse code practice programs) and the relaxing of the code requirement.
+
+ Code requirement relaxed? Yes, the multiple choice code tests,etc.
+now available represent a loosening of the code requirement. I passed
+the Novice test in 1968, the General & Advanced in 1970 and Extra in
+1995. In the "olden days", you had to have one minute of absolute SOLID
+copy... miss one letter, start over. I have to travel approx.
+150 miles to take the test, and if I didn't pass on the "first
+try", went home with nothing and couldn't take the test again for a
+month (like I could travel the 150 miles or more immediately the
+next month, especially since I was 15 years old when I passed
+General). This is pressure!
+
+ For Novice practice, I had no suitable receiver and no cassette
+player (I got my first cassette recorder/player in 1969 and it
+cost $100 then, approx. $400 of today's dollarettes). Today, my
+computer can give me limitless random practice and limitless
+"practice tests".
+
+ You can take the test 3 times in one sitting, usually close to where
+you live. I passed the 20 wpm(?) test at a regular meeting of the local
+Raleigh Amateur Radio Society. If you fail, often the test will given
+somewhere else close by within a week or so (and I say this as a resident
+of a medium sized "city" in a relatively rural state).
+
+ With the multiple choice test, you don't even have to copy the required
+*item* perfectly to correctly answer the question.
+
+e.g.
+=============================================
```

+ You copy "N-me is Ric--rd"
+
+QUESTION:
+ "The operator's name was:
+
+a) Ronald b) Timothy c) Richard d) Ricardo e) Anthony
+==
+
+If you don't copy ANYTHING you have a 20% chance of getting it right.
+Pretty tough, huh?
+
+ I passed the 20 wpm exam on my first sitting and scored 100% on
+the test (I absolutely, positively and totally lucked out on one
+question). Realistically, I'd say my real code speed proficiency
+(measured the "old" way) was more like 15 wpm.
+
+ So it's never been easier than it is now, even for the "higher"
+license classes.
+

+==cphillips@interpath.com ==

All this stuff may be interesting to someone, but it is NOT
part of rec.antiques.radio+phono, which specifically excludes ham
radio. Unless, of course, we are treating the Morse code as
antique, no longer in production, thus an object of collection as
a remembrance of things past. It may be, the FCC still thinks
that we need to maintain the skills of running spark gap
transmitters.

By the way, didn't you have to travel that 150 miles
barefoot, in the snow, and with no food?

Now that was pressure.

have to be derided because it ain't like it was.

Personally I found the CW portion of the test Pavlovian and a waste of
time the only greater waste is the half of the HF bands devoted to a
dying mode. If the band plans were to reflect actual use it would be
more like 80/20.

You hear a lot about how nice folks are on the CW portions of the
bands. My question is "What happens to these nice folks when they get
on the internet?" If anyone suggests CW is a waste of time for those
not interested in it they are accused of being lazy something for
nothing welfare types. I fully expect such accusations to be directed
at me for this post.

When I first renewed my interest in ham radio it was some 35 years after my first exposure. I got started via the no code route with a great deal of interest in learning code and using it in the hobby. The fine pro code folks here on the net have taught me the error of my ways. One particular incident stands out. Some twit named Steve from the Northeast along with his Toady from Ohio were being particularly hateful to one of the anti code people and describing it as his Christmas present. I objected and this asshole Steve tried to threaten my job. Sure make me want to jump on his band wagon.

Let this nonsense about how tough it was in the good/bad old days go we all took the tests that were in place when we decided to get our licenses and everyone new or old should be treated as a brother in the hobby. Locally this is mostly how it is and I am glad because if it was not I would not have taken the interest to get licensed upgrade and I would have missed a lot of good friends.

Thanks I feel better now. 73 de Jerry

Has anyone else had trouble getting Kenwood equipment serviced by Tucker Electronics, in Dallas. I have had my TS-930 there since last November, and my repeatec alls and faxes have been answered only by unfulfilled promises. I think they're waiting for me to get mad enough to tell them to return the radio.
Anyone else out there having similar problems. Any suggestions as to where to have a TS-930 serviced?

5618. Connecticut QSO Party 4-5 May 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-19 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4l84uv$s8@newsbf02.news.aol.com>
Source record: 227357

1996 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 4 until 2000Z May 5, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single Multi-multi classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange report and state/province/DXCC country.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low end; Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150, 144.200, 146.580. RTTY - Normal RTTY Bands (No WARC Bands)

Score one point per phone, RTTY QSO and two points per CW QSO. QSOs with club station W1QI and ARRL HQ station W1AW count 5 points. CARA will be operating W1AW on Sunday, May 5 from 1400z to 2000z, on or near the above-mentioned frequencies.

Connecticut stations multiply QSO points by states/ provinces/Connecticut counties worked (DX only one multiplier); others multiply by Connecticut counties worked.

Plaques and certificates (100 point minimum). Special certificate for working all 8 Connecticut counties.

Send entry and SASE for results by June 5 to CARA, P.O. Box 3441, Danbury CT 06813-3441.

Good luck and 73 de Jim, KD1YV

Hi All.

Any body watch Sienfield last night (4/18)?

When Kramer and Elaine were arguing about about whether he desrved
the bike at Jerry's place, he got the last word in by saying "dit dit dit!",
then slamming the door.

I doubt its really related to the code, but he said "s" none the less. :)

Take care.

I used to get my magazines later than others also. All magazines! I found out that old timer mail carriers didn't like to 'tote' the weight that magazines afford and would leave them for the newer substitutes that carry mail on their days off! But, Carriers are constrained in the number of pounds of mail thay have to tote so... magazines might wait around a few days until someone finally gets around to haul 'em. I also found out once that I had a mail man that took it upon himself to help me out and toss my QST's before I had a chance to read them. He doesn't work for the PO any more.

Have ur local PO track the mail and meybe you will find the cause.

Fine business, Ted, on your not knowing what 'hi, hi' means there. By golly, I had to ask the first time I heard it, too, here, hi. Computer here at my QTH is a Quantex Pentium. Modem here is 28,000 bps. Telephone is a Spectra-Phone. Everything here is not full-quieting and we're having a few problems. Wx here in Wisconsin is clear and warm, for once. Back to you there, Ted, and uh, oh...what was your call again? We forgot your question, by golly. NN9E for I.D.

"Hi, hi" is the CW simulacrum of a laugh, carried (most nauseatingly) over into voice communications.

>you're allowed one every six months w/o type acceptance, IIRC.

97.315 One unit of a given type may be constructed *per year* without
need for a grant of Type Acceptance. You could build several per year
if each were substantially different from the others. The intent is
clearly to permit experimental construction, but not series production.

>Commercially
>sold (not homebrew) VHF ham transcievers are actually usually type-accepted
>for Part 15 use, which seems silly to me since I'm using it as part of a Part
>97 station, but many do in fact carry a Part 15 type acceptance label. The
>same goes for many commercial VHF transcievers - both my Motorolas (commercial)
>as well as both my Kenwoods (ham) definitely are Part 15 type accepted,
>according to the labels on the radios themselves when I purchased them.

Part 15 devices are *certified* not Type Accepted. And in this case it
is the *receiver* that is being certified. Receivers operating above
30 MHz have to have Part 15 certification in order to be sold. This is
basically about local oscillator radiation limits, and for scanning
receivers, ECPA compliance. This is a much less rigorous requirement
than Type Acceptance. Every receiver or transceiver sold that operates
above 30 MHz has to have it, even the little throwaway transistor
pocket portable consumer FM radios. Most consumer radios don't have
a visible sticker on the radio, but there'll be a printed statement
in the "owner's manual" that comes with it stating that it complies
with Part 15.

>> On the other hand, converting non type accepted HAM gear for use on
>> commercial frequencies is NOT permitted...
>
>Not exactly - the *conversion* is permitted, but actually *transmitting*
>with such a radio isn't permitted as part of an FCC-licensed station. Those
>of us, like myself, who operate NTIA-licensed radio stations (in addition
>to FCC-licensed ones) may use such a radio on public service or commercial
>channels, under strict limits imposed by the FCC, the NTIA, and the MOU
>between the NTIA license holder (the USAF, in my case) and the FCC license
>holder (the police or fire department, for instance.)

The conversion itself is a grey area. It is neither explicitly permitted nor forbidden, but the FCC has used mere possession of equipment with such modifications as evidence of intent to use (see CB equipment seizures) in a manner similar to a charge of "possession of burglar tools" might be used against someone lurking around a parking lot with a lock jimmy. Operation of non-Type Accepted equipment in any service requiring Type Acceptance is what is clearly illegal, except for certain limited cases such as those you mention where there is explicit sanction to waive Type Acceptance, IE MARS and CAP operation.

No, no, no! Read 97.305. FM is not permitted on 144.05 MHz, nor is
SSB permitted on 3600 kHz. The sub-bands are there by FCC fiat, not
by ARRL band plan. Now there are some ARRL band plans, especially
at VHF and above where the FCC didn't divide things up so finely,
and those are voluntary, but the examples you post are definitely
illegal under 97.305 of the FCC rules. Other nations' rules may
vary, of course, and in fact many do. The US hairsplitting sub-
bands are about the most baroque and complex of any nation, and
that's mainly because of Incentive Licensing and the Morse lobby.
(IE emissions other than Morse have traditionally been restricted
in order to protect Morse users from interference, which I find
hysterical given the "Morse gets through when nothing else will"
mentality we so often see here.)

It should be obvious what's different when those nice polite CW
types get on the internet. They finally have sufficient bandwidth
to expose their true colors instead of only enough to exchange a
few stylized abbreviations. Then we find out that there are bigots
and bullies among them just as there are among operators of other
modes.

==========
You have to charge more than the previous discharge took out, because of losses in the charge/discharge cycle. I don't remember the exact figures for charge efficiency (the fraction of the total that actually charges the cell - the rest heats up the cell, or causes gassing), but it must be in the neighborhood of 85%, because typically you recharge 1.4 times the battery's capacity (which allows for both the charge losses and the discharge losses).

So, if the cells are discharged, I would monitor the charging current and I would put in 1.4 times the rated capacity. If the charging current is unusually low or high this changes, because the efficiency varies with charge current. Most simple batteries are charged at a rate of 10% of capacity for 14 hours. Gel-cells may use a different rule - perhaps an even lower rate.

The charger rating you referred to is probably what it can safely deliver, without frying itself. The amount of current going into your battery may or may not be 600 mA. Measure it.

I look at the Morse code requirement this way:

It forms an arbitrary elitist requirement that bans certain individuals from practically all of HF. It limits the inept and the poorly motivated to undesirable sectors of the amateur bands (like 75 phone). For the skilled, the dedicated, and the motivated, it rewards us with uncrowded band sectors populated by gentlemen who've earned the privilege.

I think incentive licensing and the code requirement are terrific. Wouldn't have it any other way. (And you only have to demonstrate proficiency one time at each speed, remember.)

I also think that the volunteer examination program puts the ability to attain the better HF operating privileges within the reach of everyone. I won't speak poorly of any no-coder, except to question their motivation -- I learned code without a computer, without a practice key, and without an HF receiver. And I came up from CB like a lot of newer (newer than QCWA-eligible, at least) hams.

Jim N6OTQ

P.S. If you can sound out the letters of a street sign in Morse code in your head, you can pass the 5 WPM test. If you can walk, if you can drive, if you can read a headline on a newspaper (if you can read THIS), you can practice code any time.

Other digital modes require more complex (though cheap) hardware, but they don't require man-months of wetware programming. I'd say that makes CW the most difficult to learn and hardest to implement of the various digital methods. And it also lags in effectiveness compared to some of those other digital methods, a double whammy. And if you count your time as worth anything, it is the most expensive method as well, both initially and operationally.

I hate to tell you, but in the era of cell phones and internet communication, HF itself is outdated. It's sure a lot of fun, though.

Since HF communication is obsolete, I see no reason why we shouldn't also keep an obsolete requirement (i.e. morse code) for entry into the brother/sisterhood.

Our society is sadly lacking in "Rites of Passage." Everyone expects things to be given to them without expending any effort. Societies that require citizens to demonstrate skill or valor before privileges are granted seem to be stronger.

Perhaps we should instigate a morse code requirement for hunting, fishing and driving licenses too!

>>player (I got my first cassette recorder/player in 1969tmoded mode
but even when we do accomplish it we
>have to be derided because it ain't like it was.

Your first line got a little garbled, but *I* WASN'T deriding ANYONE.
I wasn't lambasting people with a no-code license. I wasn't saying
code is great. I was simply telling about the way it was, not so
long ago, as compared to the way it is now. The fact is that I got
Novice/General/Advanced under one set of rules, and Extra under another.
If I was deriding people licensed under the new testing system, then
I'd be deriding myself for getting an "easy" Extra. The fact is that
I followed the current rules of the FCC each time I tested, which is
all I or anyone can be expected to do.

IMO, the major problem with the way they test today is providing a
list of all of the questions, not the CW portion. Still, I don't
deride or degrade anyone who tested under these rules (as *I* did).
I simply think that the FCC is making a mistake.

To me, the history of the hobby is a part of its charm. We have a
93 year old ham in RARS, and I enjoy hearing him talk about the
REALLY old days. In fact, we have a LOT of hams with decades of
experience in RARS, and I think it is important for us to know
"where we came from", so to speak.

>Personally I found the CW portion of the test Pavlovian and a waste of
>time the only greater waste is the half of the HF bands devoted to a

Perhaps, but the CW portion of amateur radio testing is FAR from the
only "waste of time" I am forced to engage in nowadays, and hardly the
most egregious either. However, I encourage anyone who really hates it
to let the FCC (and ARRL and whomever) know how you feel. I'm not a
big CW fan, but I don't find it all that onerous either.

[snip]
>on the internet?" If anyone suggests CW is a waste of time for those
>not interested in it they are accused of being lazy something for
>nothing welfare types. I fully expect such accusations to be directed

>at me for this post.

Then you have to consider the source. When the no-code license was
being considered, I wrote a very unbiased article about it in my
column in MODERN ELECTRONICS magazine. In essence, all I said was that
the FCC was thinking about doing this, and you should know about it
and write them if you care about it. I didn't advocate it, or say
that people should be against it. I simply reported on it.
I got hate mail (and e-mail) for writing even that. But it didn't
really bother me. THEY were the ones who were upset, not me. Therefore,
it was only a problem to them, not to me.

>Let this nonsense about how tough it was in the good/bad old days go we

I don't think the history of the hobby is nonsense.

>all took the tests that were in place when we decided to get our
>licenses and everyone new or old should be treated as a brother in the
>hobby. Locally this is mostly how it is and I am glad because if it was

I agree and try to help our new licensees, and even taught a class
for prospective Novice/Tech (even, gasp, NO CODE Techs) as recently as
two weeks ago.

So I didn't mean my posting as negative toward new licensees, and if
you'll read it carefully you'll see that there is nothing in it that
would be taken that way by a reasonable person. I was just relating a
little history.

Sorry if you took it the wrong way.

I have an older Kenwood and Cushcraft R7 relatively close to the fence, and
while I don't listen much to LW stuff, I've never heard a hint of interference.
I'm pretty sure it's an _inductive_ current loop system, rather than low frequency
RF, so you won't be able pick it up on radio's. That's why the signal cancels
itself if you take part of the loop and twist the wires together, the inductive
signal cancels since the current is running in two different directions. This
makes it easy to connect the perimeter loop to the transmitter in your house with
out creating a radial barier the pet can't cross.

Not to nit-pick, but my first ham license was a conditional class license.
A conditional was the regular general class test, written and CW,
administered by another amateur, permitted when the licensee was
more thay 75 miles away from the nearest FCC testing location.
(Back before the VE system) This was in 1963, in Yokosuka Japan,
clearly more than 75 miles away from the FCC.

5643. CW and Steam Locomotives

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-19 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <317817EB.1225@aloha.net>
Source record: 227382

CW, as does a steam locomotive, has a built in romance that will not die. Tho of no more use commercially or economically in the US, steam locomotives are still in use, and valuably so, in much of Asia and parts of Europe and Africa, of which that I am aware. Here in the US, only hobbyists and are left to keep many steam locomotives alive and operating all about the country, and are very popular tourist attractions. CW is destined for the same fate. And, as with steam engines, should you want to operate a train in certain parts of the world, you had better know how to operate a steam engine and know quite a bit about its' mechanics! So there will exist a need for CW knowledge for some time to come, as these same parts of the world where steam engines are still very viable, are the same parts of the world where CW is still very popular to those countries' amateur radio community. See for example the article about those who have worked 100 or more countres since Nov. 15, 1995, the 50th anniversay of the current DXCC program; the great majority were via CW! CQ mag, April 1996, pg. 86 at the bottm; text' also lists many of these same sorts of countries that were worked via CW, seveal in the most sought after catagorey, so the author concludes, get on CW, and in particular upgrade to Extra since it is in the Extra CW segments of the bands in which these DX stations were operated! Of course, your interests in amateur radio must include DX chasing for these points, in your case, to be meaningful.

Aloha and 73, Jim, AH6NB

It was for exactly these reasons that the last IARU ad hoc committee appointed to look into the CW req for operating in the HF region concluded that CW was still, and probably should remain a licensing requirement "to promote international communications and understanding." And don't be too surprised if this same conclusion is reached during the investigation and study of this issue over the next 2 1/2 years leading to WRC-99, and the reconsidering of the CW requirement need into the future.

I agree. I still have my Radios but they collect dust. There are to many folks out there that have no respect. Its CB radio made over again and it isn't going to get any better. I will keep my ticket for as long as I remember to renew it but I won't be talking on it much.

All they talk about around here is

1. What kind of radio they have, want, dream of having
2. What kind of radio they have had.
3. What they are going to have in the future (dreams).
4. How good they are getting into the repeater.
5. Where is the repeater located.
6. And last but not least THE WEATHER!

I havent talked on 2 meters in a year or so because the same people are on the same repeater at the same time every night talking about the same shit.
What ever happend to good old SIMPLEX.

No need to flame the shit out of me.....I just stating my oppinion!
Those of you wanting to get into Ham radio.....It is fun and you learn alot. All I'm saying is Dont get your license just to get away from the CB.....because all the other CB'ers are too!

SB PROP @ ARL $ARLP016
ARLP016 Propagation de KT7H

ZCZC AP37
QST de W1AW
Propagation Forecast Bulletin 16 ARLP016
From Tad Cook, KT7H
Seattle, WA April 19, 1996
To all radio amateurs

SB PROP ARL ARLP016
ARLP016 Propagation de KT7H

Solar flux remained low last week, but the geomagnetic field was quite active, making conditions lousy. There were several more days of no sunspots, but frequent periods with a K index of four and five increased absorption of radio waves.

When conditions stabilize in the next few days look for 30 and 40 meters to provide the best chance of worldwide DX. After April 24 the K and A indices should be quite low again, and though there won't be much ionizing radiation from the Sun, at least conditions will be stable. Look for a return to unstable periods after May 10. Solar flux should stay around 70 or lower, falling into the high sixties after April 26.

KE7QJ asked about the 199 solar flux figure forecast for August, 2000 and mentioned in ARLP014. This is a projected average for the month, and it is also a guess based upon previous solar cycles. We hope that peak levels in the Summer and Fall of that year will be higher on some days.

Questions about this topic or other propagation issues can be emailed to the author at tad at ssc.com, or via the packet radio address at KT7H at N7DUO.WA.USA.NOAM.

Sunspot Numbers for April 11 through 17 were 0, 13, 13, 0, 0, 12 and 14, with a mean of 7.4. 10.7 cm flux was 68, 68.3, 68.8, 68.7, 68, 68.3 and 69.3, with a mean of 68.5.

Pete (and others),
I don't know where I heard it, and I won't vouch for it as truth, but I believe that many audio amplifiers are VERY sensitive about a capacitive load. Therefore, you audio distortion may be the result of the caps across the speaker leads. You might try just running about 10 turns of the speaker leads through a toroid core. I know this will only cure the common mode pick-up, but unless you are certain you are dealing with differential mode stuff, it is worth a try.

73,
Don W3FPR

Hi Gary,

Really appreciated you post on liscensing vis a via the social contract. It helped bring into focus a number of things about your position that I had previously not been able to appreciate. I'm not certain I buy it all, but we'll save that for another time perhaps. Would it be fair to say that concerns of Government in liscensing may not be the concerns of those liscensed.

It seems that one of the reasons why some look to the gatekeeping aspect of liscensing is because of the apparent lack of willingness or ability of government to deal with what some consider to be inappropriate behaviour once they are liscensed. Would it be legitimate in your view of things to seperate the government liscensing authority from an internal regulatory body that would have the means to enforce a code of conduct on those who have been liscensed? This would seem to address both concerns.

Thanks in advance.

cheers, Paul

You're remembering it wrong :-)

I was stationed at remote radar sites (before going AWACS) and the Flash Overide was an Air Defense (real-world and simulated) priority. We went to Flash Overide upon any Unknown or Hostile track entering our coverage. This ensured that we would not get cut off with NORAD for any reason. The thinking was, you would see the track, and several seconds later be exterminated. Thus, the Flash Overide was usually the last they heard from you.

If you used this priority for any other purpose, you were hunted down and Court Martialed/Article 15'd. In either case your career was over. We had a lot of Draftees join the USAF back then to stay out of the Army, and they liked to use that feature. It got them out of the military very quick :-)

"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 26-Apr:
-
1. ARRL Sends Another $126,000 to Support AMSAT Phase 3-D Project
2. Over 1500 Stations Work W3A Musical Special Event Station
3. WRTC-96 Receives $5,000 as First ARRL Colvin Award Grant
4. AMSAT QSL Bureau Manager Suffers Heart Attack
5. AMSAT and SWODXA Dinners Scheduled for Dayton Hamvention
6. Weekly Propagation Forecast with George Bowen, N2LQS
7. AO-21 Turned On During Daylight Hours, Workable with Handheld
8. South Africa's SUNSAT to Carry School Experiments
9. Japan's JAS-2 Satellite Readied for August Launch
10. Special Event Station Calendar
11. Kuwaitis Use Special Prefix to Commemorate POWs Held in Iraq
12. "Amateur Radio Newsline" - Edition #975 from Los Angeles
13. Mars Probe Beacon on Amateur Frequencies
14. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
15. Michigan Section OO Coordinator Sudden SK
16. NASA Shuttle Status Reports Now Available on the Internet
17. "The RAIN Dial-up" from Chicago
18. OK City Bombing Survivors Send Message on First Anniversary
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Due to the dissolution of the "Tech Talk Network", the
service WILL NOT be carried on satellite. Negotiations for the
donation or lease of satellite space continue in earnest. When a
new agreement is reached, "This Week in Amateur Radio" will return
to satellite air. Details will be posted as conditions warrant.
All affiliates are requested to contact the producers for further
information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach

them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

I hope you're not advocating use of FM on 144.05, since only "CW" (as
defined in 97.3(c)(1)) is permitted there. Likewise, SSB *voice* isn't
permitted on 3600.

>there.

Some band restrictions are indeed FCC restrictions, the gentleman's
agreements are on how to split up chunks of spectrum where multiple modes
are permitted. *ONLY* CW is permitted in 144.0-144.1 and 50.0-50.1 MHz.
(97.305(c))

This is a policy issue; please respect the Followup-to: line.

Ted F.:

If you had thought before responding, you would have noticed that you've been sending this thread to a half-dozen newsgroups. Robie asked you to delete the sci.electronics.design group from your headers, that is all. A moment's thought should tell you that your complaints about CW make no sense to people who are not hams.

By the way, your bit about this being a free country is nothing but adolescent and juvenile nonsense. Adults are more interested in being *responsible* than they are doing or saying whatever comes into their undisciplined heads. Pay attention to what's asked of you, drop the snotty tone, and no one will feel obliged to publicly chew your ass.

> KF4DDM

For the most part the "commercial operators" aren't interested in the HF spectrum. You haven't seen any HF spectrum auctions have you? The most valued parts of the spectrum today are at VHF and above, where no code is needed for a license. Hams actually stand to GAIN some HF ground, but I sincerely doubt that we'll be able to hang on to all of our space at VHF and above unless we start making better use of it. The "lack of interest" you speak of has nothing to do with CW. How long do you think we can keep our microwave frequencies when less than 1% of the hams ever use them? Been on 10 GHz lately? Not much commercial equipment for sale for this band, and the vast majority of hams wouldn't have a clue as to how to build it. But there are a lot of commercial concerns who would make good use of it if they had it. "Lack of interest?" Yep, it's a problem. What are you doing about it?

For the record, I'm an Extra Class ham who operates mostly CW, but I support dropping CW requirements for amateur licensing. If you don't care for CW, why should you learn it in this day and age? And if you do like it (as I do) then you already know it and don't need to be tested on it. At the same time, however, I believe that the written exams should be designed to insure that the applicant has a reasonable understanding of the fundamentals and operation of radio equipment. Sheer numbers in the ham ranks will not insure that we keep our piece of the pie.

Look too at the entry level of VCR prices back about 10 years ago
and compare them to today. Ditto that for computers and just
about any electronic equipment you can find.

One of the original four function, no memory calculators I
priced was $300 in 1970. Today we have solar powered,
credit card sized calculators with multiple functions
plus memory for under $10 retail. Who'd a thought
that.

Bottom line is that the production line determines the
volume and drives the development of equipment
with more functionality at lower costs over time.

Heck, even ham equipment sees that. Look at the
price of a full function, multi-mode transceiver
these days. Yes they cost over or around $1000,
but that's cheaper than anything close to the same
capability that was offered 15 years ago. Factor in
the inflation factor and you have ham equipment at
lower prices with greater capabilities than ever before.

5662. AWG to mm: ITS EASY!

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-19 00:00:00 UTC
From: Ference Kish <fkish@attila.mtx.net.net>
Message-ID: <NEWTNews.829945238.8737.fkish@attila.mtx.net.au>
Source record: 227438
Cross-posted to: rec.radio.amateur.misc,aus.radio.amateur.misc,aus.electronics

Hi!

If you are like me and always have trouble looking up wire sizes
given in AWG, when you prefer mm, here is how I convert AWG to mm:

mm = 2 to the power of ((50 - AWG) / 6) multiplied by 0.0254

or

mm = 0.0254 * 2^((50 - AWG) / 6)

Eg: convert a #24 wire to millimetres: mm = 0.0254 * 2 ^((50 - 24) / 6)

50 - 24 = 26
26 / 6 = 4.333
2 ^ 4.333 = 20.159
20.159 * 0.0254 = 0.51 Answer: 0.51 mm

The above looks a bit complicated on first look, however, the calculation
is a breeze on most modern calculators, specially if they can be programmed.

I hope you'll find this formula useful,

regards, ference

Each of us has an idea of "what bell or whistle I just have to have", so you may get a lot of conflicting answers. I'll treat the radio in a moment. Regarding antennas, a multiband vertical is an excellent choice for your first antenna, given your restricted space and preference for DX work. They tend to be noiser on receive, especially in an urban setting with lots of manmade noise.

Regarding radios, the most important consideration is receiver performance. Look for low noise, immunity to overload from nearby strong signals (sometimes called dynamic range), and a decent complement of filters, especially if you contemplate "narrow" modes like PacTOR, RTTY, AMTOR, or radiotelegraph.

Memories are a low importance feature in my book. All modern rigs have some (16 is probably plenty) so don't spend a lot of money to get 100, when you'll likely only use less than 10. Transmitter audio processing can be very helpful and would be a plus. On-board antenna tuners can be expensive, and if you have a good antenna are not needed. If you find you need one, get an outboard model.

Look for dual VFO's or other means of working "split". This is pretty standard on most modern-era rigs, but bears mentioning if working DX is part of your plans.

Frankly, the best way to learn Morse Code, is to fall in love with it.
And then just listen to a good cw qso. Simply listen. That's right,
just listen. Make sure that the qso you are listening to is a qso where
both sides are sending perfectly spaced characters with proper spacing
between them. If you hear sloppy cw from one side of the qso or both,
simply turn your vfo dial till you hear perfectly sent cw from both
sides and simply listen. Relax and simply listen.

I have received an inquiry from an amateur friend in the UK requesting information about a "slot" which when installed into a computer allows the computer to act as an amateur transceiver. He says they are available from a company in California. They are also a topic of discussion in the UK. He would like to have the name and address of the compnay selling the item. Also the cost.

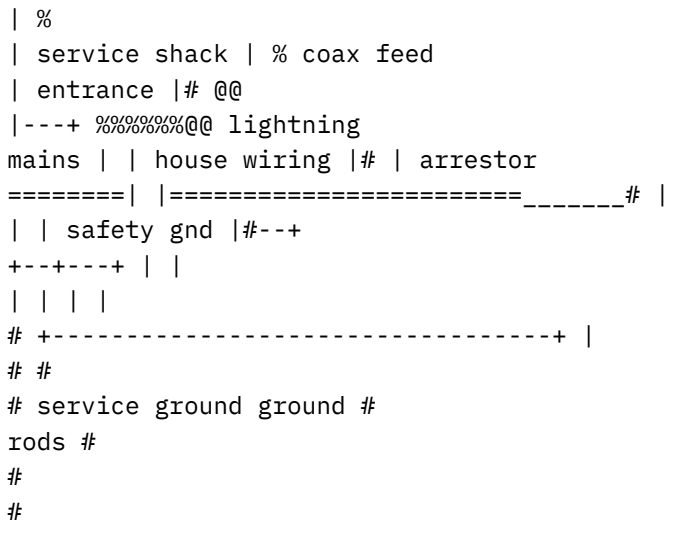
Ok, so in my case since the service entrance is on one side of the house, and
the shack/coax entrance and ground rods are on the other, do I just attach
the 3rd wire of the house wiring (ground) to the bulkhead?



Doesn't this create a ground loop, or some other sort of safety problem?
Also, since *ALL* radio wiring needs to go through the ground window, including
the power cords for the radios, what sort of device do I use there, and how
is it connected?

Thanks,

Greg KO6TH

w8jitom@aol.com (W8JI Tom) wrote:

>Be careful here fella's. Core saturation would NOT produce noticable
>distortion. Forget about that.

Tom, the nonlinear attenuation created by a core driven into saturation will cause plainly audible distortion. I've heard it many times in the course of attempting to match poorly specified crossover networks to high power drivers. It's a well-known phenomenon.

>Since the inductance of the cores should be negligible at audio
>frequencies, and distortion caused by core saturation would also be
>negligible. The effect will be only that of adding a non-linear
>inductance in series with the audio path, of an inductance value that
>has no affect on the audio frequency signals anyway.

In the example cited, 9 or 10 turns were wound through a FT-50A-75 toroid. From calculations, the inductance of this coil is approximately 300 uH. Not only is this value not negligible, it's suitable for a 6 dB/octave upper midrange crossover at 4500 Hz. Based on the size of this particular core, I would expect it to create noticeable distortion at even moderate power levels.

Incidentally, I question the negligible effect of core saturation even when (in your words) "the inductance value has no effect on the audio frequency signals". The level of audio harmonics created by saturation of an RF inductor may indeed seem insignificant when compared to the level of audio current passing through the coil. However, relative to the level of harmonics created by the amplifier (which may be well below 0.05%), those created in the saturated coil might not be so small.

>Core saturation is a moot point unless the design impedance or
>application of the inductors is far from correct, so an air core coil
>of the same impedance will produce the same results.

The application of the inductor *was* far from correct. These were the wrong cores for the job at hand, and in addition, too many turns were used. If for some reason these cores were the only choice, only 2 or 3 turns (maximum) would be required. That doesn't provide much control over the resultant inductance, which is one more reason a core using 43 or 61 material (or air) would be more appropriate.

>Look for instability in the amp caused by the load change, and lower
>the values of those .1 caps.

What load change? Not the nonlinear inductance? If that causes instability in a solid-state audio amp, the amplifier is defective. Impedance VS frequency changes in the drivers themselves are *huge*, not to mention the impedance fluctuations introduced by the typical crossover network.

The shunt capacitors of 0.1 uF are also unlikely to cause instability unless something is amiss in the amplifier. Whatever the effect of these caps, it will not be nearly as significant as the much larger capacitors typically used in series with the midrange and tweeter.

Again, what Pete experienced was almost certainly the result of saturation of the toroidal cores. The solution will be the use of a core material (and shape) more specifically suited to RF applications and less prone to saturation.

Sounds VEEERY familiar. I haven't yet got off my bum
to sell off the gear, but haven't been on h.f. for over 3 years,
and don't miss it a bit, **for the very reasons you just cited**.
"My QSL 100% to you via buro". "You are 5 by nine, pls
rpt your call phonetically". After a few years of it, with 200+
confirmed and, I feel, little or no chance of significantly
increasing that number without hours of bumsores waiting my
turn in Jim bloody Smith's 220 net, F*** it!
Even two meters is getting boring, with only traffic reports,
kerchunkers, "wombat" mentallity, etc.

The hobby is def dying, youngsters have given it the thumbs
down in favor of computers/BBSs/internet. Local councils
are making antennas a problem, and govt (most esp here in
Oztralia) take the frequencies whenever they bloody well
please (WIA makes the token complaint, which gets
appropriately filed.) We Aussies watched with considerable
interest how 220Mc just went "poof", even though we never
had it ourselves.

You think AmRad is an expensive hobby? Try buying all
your stuff in Oz. The taxes on the stuff are over the moon!
Not any easier on computers either. At least it keeps the
used gear market afloat. Most 440Mc handhelds are now
pushing up through the $A600 mark - and you got NO IDEA
when the band plan may just suddenly "change" or disappear
altogether.

Its fine and dandy to engineer your antenna cable entry to a safe
standard, but why in the world do you ask for added problems by doing this
before the house is signed off? It certainly can easily be accomplished after
you have moved in.

One other thing to consider is QRM to the dog! My parents have one of these invisible fence setups for their miniature poodle. They used to leave his collar which contains the gadget that zaps him if he wanders too far afield on him all the time, until they turned on the TV one day while he was lying on the floor beneath it. His yelping could probably be heard in the next county! Some field got set up in the TV that set off the zapper in his collar, and it gave him quite a jolt. They only put his collar on him when they send him outside now.

We haven't gotten much opportunity to test out the system with ham gear, but so far he hasn't jumped out of his skin when my husband was playing HF out in the car when we visited. Of course, he wasn't standing near the car at the time, either (the dog, not my husband...)

I dunno, can one become a priest without studying latin? After
all the parishioners can be considered swl's, they are there to hear
the message. Just a thought....

B | Ted:

B | That would be like telling your kids they have to learn how to start a M
B | Ford
B | with a crank, before they can get their driver's license! :)

I agree! The way I see it, there is NO technical reason to really get
tinvolved with CW (at least any practical reason.)

The ONE AND ONLY REASON that CW should be maintained as a prerequisete for
getting on the air is because it might help filter out the the more rowdy
prospects, who might cause trouble. I also point you to those rowdy ops
on 75m and 20m.

I hear the people saying that CW is so good and efficient (effiecient?
Huh??? :-}) and all that. But if it so good, then people would learn it
on their own, without the FCC, ARRL, some international treaty, or anybody
else making them do it!

Someone also suggested that we make the written tests tougher in lieu of
CW. That definetly warrants discussion.

One more thing: For me, I think the decision of whether or not to reatin
CW in ham radio testing lies in looking at the operation on the air: is
the language, operating procedures, etc., worse on 2m or on 75m? If it is
worse on 75m, that really, Really, REALLY, makes me wonder how good CW is
keeping out the poor operators!

But while we wait for the CW verdict, don't let it stop anyone from
progression in hamming. I passed the element 1C test when I was 14, so
anyone should be able to do it!

Have a nice day!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 APRIL AND FORECAST FOR 21 APRIL - 23 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 19 Apr
Daily Proton Fluence >1 MeV: 6.9E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.4E+09 (very high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Apr 22 Apr 23 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Apr: 71/6

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 19 Apr
Learmonth 15 3324 3333
Fredericksburg 12 23
Planetary 15 22

Observed Kp for 19 Apr: 3454 4463

2B. MAGNETIC FORECAST
Date Ap Conditions
21 Apr 20 Unsettled to active
22 Apr 15 Unsettled
23 Apr 15 Unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
20 Apr Normal Normal-fair Fair-poor
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
21 Apr Normal Fair Poor
22 Apr Normal Normal Fair
23 Apr Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
20 Apr 4

Observed Australian Regional MUFs:
Darwin and Townsville: Near predicted monthly values.
Sydney: Depressed up to 15% 00-08 UT, otherwise
near predicted monthly values.
Canberra: Depressed 15 to 30% for period 00-10 UT,
otherwise near predicted monthly values.
Hobart: Depressed 15 to 30% for 20 April.
Spread F was observed during local night at Darwin, Sydney
and Canberra.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
21 Apr 5 Ionospheric conditions are expected to be near
predicted monthly values for northern regions,
with conditions depressed 15 to 30% for southern
regions due to prolonged geomagnetic activity.
22 Apr 10 near predicted monthly values
23 Apr 10 near predicted monthly values

This is a variation on the "something for nothing" plea. GMRS offers this crowd access without any knowledge. That's where they should go.

We don't use what we have. Even in NYC most of the repeaters are
silent for days on end...

>The "lack of interest" you speak of has nothing to do with CW. How
>long do you think we can keep our microwave frequencies when less than
>1% of the hams ever use them? Been on 10 GHz lately?

What are you going to use it for? 144/220/440 is much better.

D>For the record, I'm an Extra Class ham who operates mostly CW, but I
>support dropping CW requirements for amateur licensing. If you don't
>care for CW, why should you learn it in this day and age?

Why should I learn the bandwidth of an RTTY signal if I am not going
to use that mode? I don't but the answer is clear-you might and you
need to know it to stay within the band you're operating. Same with
CW, you might use it and you need to know it as one of the principal
modes we use.

>> acceptance. Home brew linears do not.

True, see Part 97.315 and 97.317 which covers linears below 144MHz.
No other ham equipment requires type acceptance at this time.

>If you make enough linears, they do indeed need type acceptance. I believe
>you're allowed one every six months w/o type acceptance, IIRC.

True, which is the FCC's way of saying that if you make more than one
linear amplifier in less than a six month time span, they consider you
a manufactrer.

> Commercially
>sold (not homebrew) VHF ham transcievers are actually usually type-accepted
>for Part 15 use, which seems silly to me since I'm using it as part of a Part
>97 station, but many do in fact carry a Part 15 type acceptance label.

Part 15 is not a Type Acceptance regulation, but rather a compliance
regulation which governs the commercial sale of
a wide range of electronic equipment...computers, VCRs, TVs,
telephones, and a host of other products.

Type Acceptance is a specific FCC approval for use on a particular
service. Whereas part 15 compliance is required for just about any
thing that is sold in the electric/electronic market.

Quick comment on Part 15... There are two levels of compliance that
can be tested for, one is for public at home use and the other is for
the workplace environment. The at home compliance is a stricter set
of criteria. The computer industry (may have been Apple) got into
some hot water a few years ago because they were only obtaining
compliance approval for the Work environment when they obviously were
mass marketing their entire product line to home users as well as
workplace environment users.

>same goes for many commercial VHF transcievers - both my Motorolas (commercial)
>as well as both my Kenwoods (ham) definitely are Part 15 type accepted,
>according to the labels on the radios themselves when I purchased them.

Ditto the above comments. The units are Part 15 Compliant, as opposed
to saying they are Type Accepted.

: -Steve B. N6EQY

Steve,
You don't NEED to ground things with a separate ground. Sometimes
you can get away with the AC ground. Separate grounds for the radio
gear are helpful when you start experiencing RFI problems. I have run
plenty of stations without one - including the current one which is
1500 watts. It just depends on the location how things work out.

it is amazing how many rabid code supporters, who passed the exam
in 1952 and haven't worked CW since, let slip remarks on the airwaves
that indicate that they lack the basic essentials to pass the current
Tech exam. i can't take credit for the idea if CW is so important, ALL
hams must be recertified every 5 years to show current competance.

despite about 30 years experience in hardware and software, including
rf design, the code requirement kept me out of the hobby. i am currently
working at the 13 wpm test, so i can employ more efficient digital techniques
on HF, and resenting every minute of it.

like someone already said, stop by your local radio shack, but dont' just get a copy of 'now you're talking' -- (which is, btw, a FINE fine book), but ask the helpful clerk if there is a local HAM radio club. there probably is -- probably one on your campus too, or at least nearby (every radio station has a ham or two working behind the scenes, try there too). it's much easier to get into the swing of things if you know someone personally who does it (i find anyway) and you'll have someone to talk to when your liccense arrives as well...

Eyewitness Account of the Zebulon Tornadoes

by Don Flowers, AB4EN

I had never seen a tornado before. I had taken spotter training and knew what to look for, and have even been on the scene just seconds after a tornado touchdown in eastern Wilson county several years ago. But I have never experienced what happened on Monday, April 15th, 1996.

The Raleigh Skywarn was in active mode on the 146.880 repeater that evening as I left work just after 5PM. There had been a severe thunderstorm watch in effect for most of the day, and tornado activity had occurred earlier in the day in the Kinston area. The Raleigh NWS radar was also down, and Noble, N4UOQ, who was liaison with the Raleigh NWS, was informing everyone that amateur weather spotters would be heavily relied upon for severe weather reports.

Shortly after 5PM, a funnel cloud was spotted near Jordan Lake, moving northeast. There was a flurry of activity as reports came in for several minutes until the storm seemed to dissipate. I was almost home now, just a few miles northwest of Zebulon. It was nearing 6PM, and attention was focusing on an area in Johnston County.

The Skywarn net control, Gary, KN4AQ, was seeking reports for the NWS from northern Johnston county for severe weather. It was getting dark in the southwest from my location, but nothing unusual....yet. Ron, KE4KFZ, reported heavy rain from the Archers Lodge community in north Johnston County. Then a few minutes later, Ron returned with a report of a wall cloud with funnel and rotation. Ron went mobile for a better view, but the funnel was being obscured by rain.

As the funnel neared Wendell, Ron and several other spotters chasing the storm said they thought the funnel was descending. I got the family into the hallway in the middle of the house and covered them with pillows. I grabbed another battery and antenna and positioned myself on the deck of our house facing the southwest. There were very ragged and dark clouds approaching extremely fast, with an almost horizontal rolling appearance. The I saw what was obviously a large funnel cloud on the heels of the rolling cloud formation, but not moving quite as fast. It was moving north northeast around 40 mph as best I could determine. I could see from the angle it was moving that it would pass just east of us. I initially couldn't see rotation.

It was now almost due south of me, and I could see large 5ft long sheets of tin caught up in the CCW rotation of the tornado about 200 feet in the air. I immediately called the net control with emergency traffic and made the report of a tornado on the ground, about a mile northwest of Zebulon near highway 96 and 64.

It was now moving almost parallel with highway 96. I could see it had just crossed highway 97 and then 64. Johnny, WA9SZL of Wendell, almost simultaneously called net control with the same report, except he was almost directly under the tornado. He said debris was falling all around his vehicle and he was jumping out of the vehicle seeking cover.

I could now hear trees cracking in the woods about a quarter mile to the east of me. There was no wind at all at my location, however. There were blue-green lightning flashes from just under the base of the tornado a few hundred feet up, but there was little or no thunder heard. The tornado seemed to be a couple hundred yards wide at tree top level, with a hundred foot or so path of destruction at the ground, as best I could tell from my vantage point.

Just as soon as it was past, I jumped in the truck and went about a half mile to the northeast of my home. The road was blocked with a tree and a power line stretched across the road. I could see at least three houses with heavy damage. One barn was totally flattened. I checked for injuries at two of the three houses, but before I could get to the third I heard Ron calling net control with a report of another tornado in his area heading toward Zebulon.

I backed up the road to an overpass over highway 64. I could see the path the first tornado had left across the four lane highway. Several cars had pulled off the road and the occupants were in the ditch. I could see another tornado, smaller than the first, to the south, following almost the exact same path as the other one had except a few hundred feet farther to the east. I backed off the bridge and pulled just off the road ready to jump in a ditch.

I could see now that it was going to miss me, however, so I stood there, again watching the second tornado pass by. The Skywarn net control was bombarded with reports almost at once describing the second twister. I tried to transmit at the first opening, but found my handheld display locked up. Apparently keys had been touched during the commotion, setting my UHF vfo to scan and out of band. This locked up my radio on 2 meters as well. I wasn't transmitting. I probably wouldn't have been heard anyway though, there was a virtual pile up on the repeater.

This second twister was much more sharply defined. There was no doubt about rotation with this twister even though I saw no debris. It was a smaller tornado, and seemed to be moving a bit faster than the first one. Shortly, it was gone. I went quickly back to the house that I had been unable to check on earlier. The front porch was gone. One huge oak tree was partially through the middle of the roof. I could

see two-foot wide trees cleanly snapped off at about 15 feet in height, and in a path about 100 feet wide through the woods behind the house. Dozens of pieces of tin lay strewn across the fields surrounding me.

A man walked out from around the back of the house. He was OK and was the only one home. Emergency vehicles began to arrive, and the roads all around me were blocked with trees. I returned home to find my power off.

This was an experience I will never forget. I so greatly appreciate the spotters that saw the tornadoes in their earliest stages before they touched ground, and for the net control stations and liaisons that make Skywarn work. We knew the tornadoes were approaching and exactly which direction they were traveling.

5706. Ham Radio SKYWARN Operators Save Lives in Zebulon (NC) Tornado

Newsgroup: rec.radio.amateur.misc

SKYWARN HAMS SAVE LIVES DURING ZEBULON TORNADO

Raleigh, NC, April 19, 1996. No one was killed by the tornadoes that hit the Raleigh, North Carolina suburb of Zebulon on Monday night, April 15th. Ho-hum, just another lightweight tornado -- nothing to get excited about. It's the killer tornadoes that make big news... until you look a little deeper and see WHY there were only a few minor injuries and no fatalities from a series of tornadoes that damaged or destroyed nearly 100 homes at dinnertime.

Eyewitness reports of the tornadoes on the Amateur Radio SKYWARN network, intercepted and broadcast by Raleigh TV stations, gave many people the few minutes they needed to take cover. The SKYWARN network is a voluntary effort by Amateur Radio operators and other weather spotters, working in cooperation with the National Weather Service. The Raleigh SKYWARN network had been on the air since around noon Monday, with an operator at the ham station at the Raleigh NWS office, because a severe thunderstorm watch had been posted.

Just before 6 p.m., the NWS Doppler radar operator asked the SKYWARN operator to see if anyone on the network could see anything developing east of Garner. An amateur radio operator near Archers Lodge reported that he could see some rotation beginning in a lowered cloud base. By 6:15 p.m., another ham reported the tornado on the ground just south of Zebulon. That report was immediately confirmed by two other hams in the vicinity.

That report prompted a tornado warning, issued moments later by the NWS. The amateur radio traffic was also monitored by the weather staff at WRAL-TV, which broadcast its own warning before the official NWS warning.

Over the next thirty minutes, the hams reported several additional funnel clouds and tornadoes, following nearly the same path as the first. Between the tornadoes, they reported damage in and around Zebulon. The final tornado report spotted twisters crossing into Franklin County near Pilot/Raleigh Road.

The Amateur Radio operators job wasn't finished with that last tornado report, however. The SKYWARN net stayed on the air late into the evening, as a tornado watch continued until 1 a.m. Meanwhile, telephone circuits in Zebulon were disrupted, and cellular channels were overloaded. Wake County Emergency Management called in additional ham operators to provide communications between the county Emergency Operations Center and several sites in Zebulon: the

incident command post, a staging area near the West Side Mobile Home Park, a shelter at East Wake Middle School, and the media briefing center. A station was also activated at Red Cross Headquarters in Raleigh. These stations provided primary communications until phone circuits were restored, and remained in operation until 1:00 a.m.

The Amateur Radio Operators involved in the Skywarn operation include:

Don Flowers AB4EN, Richard Futrell KE4EAH, Ron Neal KE4KFZ, Johnnie Mayfield WA9SZL, and William Tate KF4EAG, all providing eyewitness reports from the Zebulon area. Nobel Phelps-Breeden N4UOQ and David Fix N4YTO manned the station at the National Weather Service, and David Faircloth KD4WSC and Gary Pearce KN4AQ were SKYWARN net control stations during the incident. Unfortunatly, this list leaves out many other hams who contributed information during the SKYWARN net, and who were called out later as part of the Amateur Radio Emergency Service.

For more information on Amateur Radio, contact me by E-mail or telephone.

Sorry, you're too late! All N-prefix 1x3 callsigns in the 8th call district have been used up for several years. Otherwise, you would have been issued one originally when you got your Technician class license. "Group C" call signs are/were issued to Technicians and Generals. When these N-prefix calls ran/run out (the 1st and 3rd are the only call districts that have any left, I think), they start issuing call signs from the Novice "Group D" block. These are all 2x3 call signs (like what you have now). If you want to gamble, you could check the block on the 610 form (and initial it) for a new one, but it would be the same style you have now, just a later issue.

: The numeral corresponds to the call area that you will be operating in.
: W1 or N1 or K1 can be used here in Massachusetts. W4 is southern US like
: Florida South Carolina, etc.

: Someone correct me if I am wrong, but contrary to other countries, here in
: the US, the prefix FOLLOWS your callsign. i.e PA3BTL/W1

: --
: ========== Give every man his Dew ==========
: Michael A. McCarthy

That's true if the visiting ham is a Canadian. There is a special agreement concerning US and Canadian hams. My understanding of the ITU regs says the prefix goes in front W1/PA3...when there is no mention in the reciprocal agreement.

>signal is still present.

Yes, the gain-bandwidth product of your opamp is insufficient for the frequency of operation. There are two factors which primarily control opamp suitability for high frequency operation. The first is the gain-bandwidth product which determines how much small signal gain you can get from an opamp at a given frequency. The other factor is slew rate, which determines how much large signal gain you can get from an opamp at a given frequency. Most opamps have a unity gain frequency of 1 MHz or less (though there are some high frequency opamps), which means that at 277 kHz the achievable small signal gain will be less than 2. If you're trying for more gain than that, you'll be disappointed. And it also seems like you're running into slew limits due to the relatively high input level.

I don't have a databook handy, but there are some opamps with a unity gain frequency of 100 MHz or more. That'd let you have a gain of 10 db or so at 277 kHz. Better, of course, would be an IC designed for IF amplifier service. There are a number to choose from which would be suitable at this frequency, and would allow gains of 40 db or more (supply voltage limited of course).

>One other question deals with the filter. I am going to use a bandpass
>filter to remove noise and have the bandpass center around 277 kHz. Will
>this remove the signal that is "riding" on the carrier wave because it
>has a frequency that is much smaller than 277 kHz?

That would depend strictly on the bandpass of the filter. The AM signal is the vector product of the carrier and the modulating signal. Its bandwidth is roughly 2 times the highest modulating frequency. Thus for an AM signal modulated by a 1 kHz tone, the required signal bandwidth is 2 kHz, centered around the carrier

frequency. The AM signal consists of a constant carrier and two sidebands symmetrically located to either side of the carrier. It is these sidebands which carry the modulation and must be passed by the bandpass filter. There is no component to the signal at 1 kHz. You only get the modulation frequency back by demodulating the AM signal, another vector product operation, performed by an envelope detector.

Don't be confused by what you see in the time domain on an oscilloscope. The carrier amplitude isn't really changing with modulation. This is an artifact of observing the vector sum of the carrier and sidebands in the time domain. If you look at the signal with a spectrum analyzer, you'll see that the carrier is constant and that the sidebands are varying in energy in step with the modulation. For a 277 kHz carrier and a 1 kHz modulating tone, the sidebands are at 276 kHz and 278 kHz for the lower and upper sidebands respectively. There is no audio frequency component to the signal.

More than 5 months is certainly an unacceptable turnaround time for
equipment repair. However, considering it is a Kenwood, you probably
should have sent it to a place even hotter than Texas, if you get my
drift. :-)

Good training for HF! You'll have to learn to wade through the QRM and
QRN to make that interesting contact. :-)

>I am now looking to get my HF rig...and wonder if any advice regarding all
>the bells and whistles is worth the extra money (speech processors, 100
>memories, auto tuner, etc)? These bells and whistles increase the price
>about $400 (for the rigs I am looking at).

One man's frill is another man's essential feature, so it is hard to
say what is worth what to whom. For my style of operating, I don't
find memories very useful, but they are essentially free with today's
microprocessor controlled radios so why not have them? I won't pay
extra for them, but if they're there, removing them won't lower the
cost of the radio significantly. If the manufacturer tries to tell
you different, he's scamming you.

I'm also not overly fond of heavy speech processing, so that's not very
important to me either, but some folks just must see that RF output meter
needle hang steadily over all the way to the right all the time, so they
demand heavy speech processing. Nevermind that it makes them nearly
unintelligible or at least unpleasant to monitor, and nevermind that
their signals splatter over 10 kHz or more. Nevermind that shack noise
pumps up and down in the background while they sound like they're talking
from the bottom of a barrel. Now a *little bit* of speech processing can
be a good thing, and *intelligently used* it can improve your ability to
communicate in marginal conditions, but proper voice control and microphone
technique can minimize the difference between a processed and unprocessed
signal. In other words, you can do a lot of speech processing with your
own voicebox and by the way you use your microphone. This is well known
among professional broadcast announcers, professional singers, etc.

Autotuners are *convienent*, but they also aren't necessary. Their
matching range is usually very limited, so they're best considered
"line flatteners" more than anything else, IE they work best when
they are least needed. There are so many antenna and feed arrangements
used by amateurs on HF that the need for an external tuner with greater
range is likely even if you have an internal autotuner, so why pay for
redundancy? Again the answer is convienence. There are also many cases
where only a touch of matching is needed in order to keep the rig from
folding back power output, and the internal autotuner accomplishes that

without effort. Is it worth the extra cost? Maybe, maybe not. It depends on your situation. I usually won't pay extra for one.

What *is* important, and worth paying extra to obtain, is excellent receiver performance. A receiver that is not IMD prone, doesn't suffer from strong signal blocking, has low phase noise, has excellent selectivity options, has a flexible AGC system, and low distortion audio output is worth a premium price. And what *is* important is a transmitter with a conservative thermal and electrical design which allows it to easily meet its performance specs during heavy usage. These are the core values which must not be compromised.

Another (very subjective) factor of importance is the user interface of the radio. While operators can adapt to any bizarre or baroque user interface to one degree or another, a user interface that suits the way *you* think a radio should work is very important to operator satisfaction. You'll be more productive with a radio designed to work the way you want it to work than with a radio you feel you are constantly fighting. Now every radio has a learning curve, some steep, some easy, but once you're over that, does the radio work the way you want it to work? The only way to answer that question is to live with the radio for a while. Looking at ads in magazines or twiddling knobs in the store for a few minutes won't tell you that until you've gathered a lot of operating experience with various radios and can tell almost immediately whether a radio is configured the way you'd like or not. Each manufacturer has his own philosophy here, and it is the main place where brand loyalty is made or broken.

>Also..living in Amarillo, Texas...not much of a yard (and neighborhood
>restrictions)
>and wonder if a
>vertical antenna will give me any good DX (am considering Cushcraft Ap8A).

Vertical antennas have a small footprint above ground, but their footprint below ground can be enormous, IE they depend on good ground conductivity to a much greater degree than horizontally polarized antennas. This is true even for the "ground independent" designs. Your section of Texas is not noted for good ground conductivity, so I expect you'll be disappointed with the performance of vertical antennas. While any antenna will radiate after a fashion, for good performance you're going to need an elaborate buried radial system. That can be expensive, and difficult to install. If local soil conductivity were better, a vertical would be more likely to perform well, but you'd still need some radials for best results.

I'd suggest a high horizontal antenna instead. Even if you need loading coils to shorten it to fit your lot, it'll probably still do better than the vertical. Low band operation is going to be a problem from your location no matter what you choose. It'll be wise to concentrate on operating at 40 meters and above for best results. Hopefully, you can fit a 66 foot dipole onto your lot. With end loading coils, it can even work on 75m. If you can get it about 65 feet up, it'll do well. Even if you can't get it that high and have to settle for 35 feet, it'll

probably still work better than a ground mounted vertical.

Lattin Radio Labs made an excellent coax fed, 80m-10m, stub tuned,
end loaded dipole for many years. I don't know if they're still
around, but you can make something similar yourself. Wire is cheap,
don't waste money om a commercial antenna. Spend a little money on
the ARRL Antenna Book instead and do it yourself. If you spring for
an external tuner, the old flattop antenna fed with ladder line still
makes an excellent all band antenna.

Wire antennas are also fairly unobtrusive, so the neighbors may not
be as upset as they might be if you erected a tribander on a tower.
If two antenna supports prove a problem, you can try an inverted
Vee antenna. While I don't recomend it as a first (or even second)
choice, an AEA Isoloop could be suitable if the neighbors really
get on your case.

>Any advice on the above and regarding a first time set-up would be
>appreciated.

The best advice I can offer about first time setup is to get experienced
local assistance. Nothing beats some hands on help from someone who has
already "been there, done that".

5721. RAC 'n Rollup Q&A #3

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-20 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.348.20@bytewise.org>
Source record: 227323

Subject: RAC 'n Rollup Questions and Answers
Date : 1996 - Fir. Apr. 19 18:20 Local/ Sun. Apr. 19 23:20 Zulu
From : Steve Hajducek, N2CKH
TO : ALL RADIO AMATEURS

The following are some of the most common questions and answers regarding RAC 'n Rollup that have been exchanged via internet e-mail during the last week.

Q: Will be able to order both the Callbook CD-ROM and your RAC 'n Rollup program together ?

A: No, I only sell RAC 'n Rollup. However it is readily available from many sources, with the lowest price I have seen being $39.95 U.S. from AA6EE at 16832 Whirlwind/DX10, Ramona, CA 92065 as advertised in "The DX Bulletin".

Q: Does your program work with the revised version of the CD Callbook as advertised in the May QST on page 190 ?

A: Until I received my QST I did not understand this question. The answer according to sources at Amateur Radio Callbook is Yes. I have been told that the "REVISED CD-ROM" has added Country names and Date of Birth to the data and that the .DLL has NOT needed an update. Furthermore, I was told that the new version will not be available until mid May '96 for deliveries. Not having the revised version to work with I can not make and statements other then the fact that some entries in the November version had Country data, and to use those entries with RAC 'n Rollup you simply turn Prefix off or click on the next space in the country list box. Obvisouly with the revised version you would turn Prefix Off.

Q: I see Radio Amateur callbook advertising a revised version of their CD-ROM that has country information and label printing, can I get my money back for my RAC 'n Rollup order I just mailed ?

A: Yes. But, you already have the November version of the CD-ROM, why go buy the same data again for another $50.00 when for $ 9.95 you can use the version you already have ? Furthermore, RAC 'n Rollup is not only the answer for everyone that already has the first version of the RAC CD-ROM callbook, it has and will have additional features that enhance the use of the Callbook in both the current version, this "REVISED" version and future versions.

Q: Where can I get the demo version of RAC 'n Rollup ?

A: The file name is RAC_DEMO.ZIP and is 1.3MB is size and takes about 5 minutes at 14.4KB using Zmodem protocal. At present it is

available from the support BBS at 1-908-363-2760 and both the ARRL and Kenwood BBSes. I have also begun the process of putting a WEB site up, within a week or two I hope to have it in service.

Q: I liked the demo, but how come you do not provide grid square for overseas calls ?

A: Because the coordinates for the stations are not in the database to perform the calculations with. However, RAC 'n Rollup v1.0.1, which is currently being developed will add bearing and distance for both domestic and foreign stations, improved printing support for Laser, Ink Jet and CoStar printers and many other features.

Q: Your help file for RAC 'n Rollup makes mention of you CATCC software for radio control and logging, when can I buy this software and where can I get the demo and tell me more about it, does it do more then change mode and frequency ?

A: This is not a RAC 'n Rollup question, but since RAC 'n Rollup came from code written for CATCC it's only right to give CATCC some attention (I will get carried away) in this forum... so here goes:

CATCC is still under development. It is being beta tested officially by a number of Amateurs in the U.S. and abroad.

The CATCCjr demo that was released into cyberspace in October '95, which is an early version (May '95) updated for Kenwood radio support has acted as a widespread beta test program. Originally there was to be a version of CATCC for each major brand of radios, then the design developed features that necessitated one version of CATCC supporting all radio brands. Considering the level of support of the radio, not just HF but simultaneous HF and VHF/UHF and even multiple radios, with transverters as required, supporting 8 com ports at one time, you can see why CATCC has been in development and beta testing since January 1995. There is nothing else like it on the market.

The demo version (CATCCjr) will be on my WEB site as soon as the site is activated. The demo is now available from the ARRL BBS and my support BBS at 1-908-363-2760 and had been (may still be) on various amateur radio ftp sites worldwide, such as ftp.qrz.com and demon.co.uk and is over a 3MB download.

CATCC does so much more than just change mode and frequency when if comes to radio control that all other software that has been on the market stating "provides full radio control" will want to go and hide. Don't get me wrong, CATCC is not the perfect software for radio control, logging and award tracking, NOT YET! It does however excel at radio control and provides unique features found in no other radio control/logging software yet seen. The demo version is an adequate tease, very functional for radio control of Yaesu and Kenwood radios, simple logging to CT(tm) compatiable file format for importation to your current logging program (should you have one) if you want to just use if for station control. The software is highly integrated with the

real-time data from the DX-Cluster, it provides user programmable DX alerts with alarms and automatic response modes for grabbing spots, a DX Personal Information Manager for preprogramming upcoming DX expeditions and contests from Magazine, News Letter and Packet DX reports well into the future, with up to 20 callsigns or prefixes for each day programmble and automatically loaded at program start of UTC day change so that you never again receive a copy of the DX Bulletin(tm) or CQ Magazine (tm) and forget that DX expedition or Contest when the weekend rolls around, DX voice announcements, DX activity graphs, DX oprating habits tracking and analysis and more tools that help the user achieve DXCC success.

There will be two versions of CATCC release, the first will be full station control and logging to the user choice of compatiable logging programs database formats. The full version will provide its own database logging format and full report generators, award tracking etc. Thus if you are already a long time user of one of the major logging programs and want to keep using it for maintaining your database you can use CATCC/Lite for your station control and logging and the other software for reporting or make the switch to the full CATCC. Currently CATCC supports the following hardware:

Yaesu, Kenwood, Icom and Ten-Tec radios, both HF, VHF and UHF models where exist. JRC and SGC support is forthcoming. AEA MM-3. All the parallel port devices such as voice keyers, switch boxes etc. W9XT voice keyer. All standard packet TNC's. Hy-Gain DCU-1 and SARtek-1 (PDA Associates) antenna rotor controllers, with others under development. For callbooks we support Amsoft, Buckmaster, Radio Amateur Callbook and QRZ.

CATCC will go for $ 49.95 without printed manual and $ 59.95 with, and CATCC/Lite will be $ 29.95 without any printed manual offered. Both will also have shipping and handling costs as well.

RAC 'n Rollup now shipping and is only $ 9.95 U.S. plus $ 1.50 U.S. shipping/handling in the U.S. or $ 5.00 shipping/handling overseas.

Send your orders with Callsign, e-mail address and mailing address to:

[Re: All sorts of people jabbering about how they hate the jabbering they hear on amateur radio these days deleted for brevity...]

Look, people...do any of you know why the "Newsgroups:" field is in the header or how to edit it or *anything*?!
Please take the inappropriate newsgroups out of that field before you followup to a post...it's getting old seeing this crap in rec.radio.swap day after day...I'm sure the rec.antiques.radio+phono, sci.electronics.design, rec.radio.shortwave, and rec.radio.scanner folks are getting sick of it as well...
Take a close look at the Newsgroups: header in this message...which newsgroups do you see there? Just one, right? Let's keep it that way for this thread unless you'd also like to see it in rec.radio.amateur.policy which is probably more appropriate for this stuff anyway...

Now...unless you have a question about selling stuff or want to buy or sell something, please don't post here...it wastes everyone's time...

Back to our regularly scheduled code/no-cde debate...<sigh>

>we'll save that for another time perhaps. Would it be fair to say that
>concerns of Government in liscensing may not be the concerns of those
>liscensed.

Yes, absolutely. The government is required to operate in the *public
interest*, and current licensees are but a tiny fraction of that public.
So their concerns are only a limited subset of the concerns the government
must address. That's not to say that amateur radio should simply be thrown
open to the entire public without any regulation or licensing requirement.
Don't mistake the social contract or the doctrine of the Common Heritage
of Mankind as implying that at all. What is implied by those two philosophical
underpinnings of regulation with respect to exercise of commons ownership is
that any limits placed on exercise of ownership rights to the spectrum by
individuals must be reasonable, rational, and consistent with the terms of
the social contract.

>It seems that one of the reasons why some look to the gatekeeping aspect
>of liscensing is because of the apparent lack of willingness or ability
>of government to deal with what some consider to be inappropriate behaviour
>once they are liscensed. Would it be legitimate in your view of things
>to seperate the government liscensing authority from an internal regulatory
>body that would have the means to enforce a code of conduct on those who
>have been liscensed? This would seem to address both concerns.

It should be obvious that government's legitimate function is to
enforce the social contract. If the government is failing in its
responsibility, then government must be repaired or replaced. We
must be careful, however, that any such replacement is constrained
by a set of checks, balances, and limits such that the exercise
of quasi-governmental power is not used to quash individuals due
merely to group whim, IE we must avoid mob rule. The tyranny of
the mob is often worse than the tyranny of any dictator. In a
constitutional republic, a primary purpose of government structure
is to hold the whim of the mob in check, to protect the minority
view from the force of the majority (the majority view needs no
protection since it has force major on its side).

In other words, if we grant enforcement power to non-governmental
entities, we must guard against kangaroo courts. The non-governmental

entities must be bound by the same rules and limits as government itself is bound. Who will watch the watchers is a question that has plagued us from time immemorial.

Thomas Jefferson said that government governs best when it governs least. I think that's a very wise idea. For the most part, I think we can keep our house in relatively good order by peer pressure and social recognition, IE we offer respect to those who behave well and shun those who do not. In extreme cases, we call on government to sanction those who misbehave most badly and who do not respond to peer and social pressures. I don't think that we need our own kangaroo courts, and certainly not the services of Judge Lynch.

In a nominally free society, government is not allowed to apply a priori restraint on its citizens because they *might* violate a rule. It is only allowed to bring sanction when rules have provably been violated, and then only against those shown to have violated those rules beyond a reasonable doubt. Thus prior restraint in the form of gatekeeping is generally illegitimate, and any such action must be strictly limited to provably necessary matters.

We start down a dangerous slipperly slope when we start the course of prior restraint because we fall into the trap of restraining the freedom of action of the bulk of a group of individuals for fear of the possible misbehavior of some individuals in that group. This punishment without a crime is an illegitimate exercise of power.

An example of that sort of abuse in amateur radio is the current Type Acceptance requirement for HF linear amplifiers. It has the effect of penalizing an entire class of individuals, amateur operators, because of the abuses of a few individuals, bootleg CBers, who are not even members of the group burdened by the regulation.

This sort of thing happens far too often in today's society. We see it in affirmative action programs, in firearms bans, in the so called politically correct movement, etc. We also see it in such repugnant concepts as group rights and collective guilt. Groups cannot have rights, rights are inherent properties of individuals. And groups cannot have collective guilt, only individuals can have the responsibility for their own actions. These are fundamental concepts, we ignore them at our peril.

>>
>
>Be careful here fella's. Core saturation would NOT produce noticable
>distortion. Forget about that.

Jack has already addressed this well, I just want to correct a
misstatement of mine here. The saturating core will not generate
harmonics, rather it will produce IMD due to the changing
impedance at signal current peaks. This modulation of current
in the load path will produce products that can be plainly audible.

As example, suppose the music has a 10 kHz tone and a 40 Hz bass
note. The current will be dominated by the 40 Hz note, which will
cause the core to go in and out of saturation in step with its
peaks. This will change the impedance seen by the 10 kHz note,
and AM sidebands will be formed around the 10 kHz tone. This IMD
can be objectionable.

The solid state AF PA can be modeled as a constant voltage source
due to its extremely low output impedance, and the core's reactance
can be modeled as a variable Rs (actually Xs) modulated by 40 Hz.
This is a series modulator, as found in some old AM transmitter
designs of the 1920s. Of course it is self-excited by the multiple
frequencies in the amplifier rather than being externally excited
by a magnetic amplifier as was the case for the old transmitters,
but the principle is the same.

5726. Shielded Antenna feedline for Dx 392?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-20 00:00:00 UTC
From: feustel@netcom.com
Message-ID: <feustelDq4yI5.BJF@netcom.com>
Source record: 227328

I just bought a Dx392 as a second shortwave radio. My house has
aluminum siding. I'd like to run a shielded feedline from the
radio to an outside antenna that won't pick up a lot of ac hum
from the house wiring.

Can someone describe for me the appropriate antenna?
Is a balun indicated?

The radio antenna connection is a 1/8" phono jack.

Thanks.

Before I say this, I want to make it very clear that I am not flaming, and that I have a lot of respect for the cojones that the SKYWARN people have.

Speaking as a former resident of tornado alley (the Great Plains), all I can say is that this chap was pretty damn lucky that he is still alive. Tornadoes are unpredictable beasts, and this/these could have turned and headed in his general direction at any moment. Two days before I moved down here to Raleigh, I had the opportunity to watch a tornado from atop the KARE-11 TV building in Minneapolis, MN. The tornado touched down 10 miles away in the suburb of Apple Valley, but the second the funnel lifted from the earth and started in our general direction, the cameras were left on and everyone on the roof beat a hasty retreat back inside to operate everything by remote.
It was a very frightening experience, and one I do not care to repeat.

Again, I respect the hell out of the SKYWARN people, but I just want to make it very clear that at the same time the tornado veteran in me is rather aghast at the tremendous personal jeopardy that this person seemingly unnecessarily placed himself in.

Good luck with the test. An old friend of mine was similarly experienced
in radio and enjoyed the hobby but found a mental block when it came to
Morse code. Unfortunately, he passed away at Easter.

For myself, I don't seem to have the time to spend, work has filled too
many evenings in the last few years. Anyway, for what it is worth, to
those who have ever made comments along the lines of "we're better than
you because we have a full licence" (I was on the receiving end of some
such comments when a UK "A" licence holder told me, a "B" (=VHF only)
how great cross-band working was... he was using 10m and 2m... little
did he know I used 2m and 70cm for years before that :-).....

The standard of Morse code (as someone who intended to be a Merchant
Navy Radio Officer, and during our course had to maintain 20wpm UP)
was so awful that I never wanted to be tarred with that brush, and
thus happily remained above HF with various other interests.

I remain, a happy SWL, but you'll _never_ find me working on HF bands.
73, Peter.

>6. And last but not least THE WEATHER!

Here in the Denver area, I've noticed the same thing. There is one repeater frequency where I'm expecting C.W. McAll to come up any second with a "Good Buddy" message. It seems to be a bunch of truck drivers complaining because someone in a more expensive truck than theirs cut'em off. I have MUCH more intelligent conversations with my 7-year-old daughter every day.

On the other hand, there are other freqs I've found where the "ragchew" is much fun to listen to and participate in. Being a computer, GPS, and flying nerd, I've participated in a number of great sessions with people with much more knowledge than me in these areas. I learn a lot from talking with these people.

I have no desire to learn Morse Code, and that will keep me from upgrading my license, even though I would like to. I learned Morse Code 24 years ago when I was going through navigator training in the Air Force, and promptly forgot it when I no longer had to use Consolan to find my way to San Francisco :).

I'm a new hamster (God, is that politically incorrect on this newsgroup?) and enjoy the hobby, but I get the feeling that there are, um, Luddites that don't like me because I don't know what "dih dah dah dih" means (J, right?).

By the way, I thought Consolan was great, but Inertial Nav Systems made my job as a navigator MUCH easier. Of course, it also made me obsolete :).

Anyway, I guess I'll keep my QSO'ing and QSW'ing and 73'ing at 2 meters and above. I'm sure I'm missing out on a lot, but then, I don't watch much television, either :).

This is very true. But then, part of the reason why I am not completely freaking out about this gentleman's actions is the fact that tornadoes are very rare beasts down here in the Carolinas--therefore it is natural to expect a certain level of naivete when tornadoes happen here, just as it is natural for me to stay the heck off the roads and use public transportation in the wintertime when we have our rare snows. Two flakes, and everyone seems to forget how to drive here. :)

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC., formerly the WESTLINK RADIO NETWORK. Amateur Radio Newsline is a audio news service distributed via telephone.

This hardcopy version is produced by Dale Cary - WD0AKO from scripts provided to him weekly by Newsline. It is then distributed to on-line services, bbs networks and internet user jointly by Dale Cary and Steve Coletti.

Editorial comments, news item and all other business should be directed to:

Bill Pasternak, WA6ITF
Newsline Producer & Editor

Internet E-mail: 3241437@mcimail.com
MCI E-mail: WESTRADIO
Phone: (805) 296-7180
Fax: (805) 296-7180
(Fax senders wait for voice prompt.)

Hardcopy comments or complements can be directed to:

Dale Cary, WD0AKO
Hardcopy Distribution for Newsline

Internet E-mail: wd0ako@rrnet.com
Phone: (218) 236-6324

The audio version of Newsline can be recorded from one of the currently operating lines listed below. This list is kept as accurate as possible. If any changes are not listed, please contact Dale Cary, WD0AKO at the above listed addresses.

Again, and as always, we thank you. This ends the closed circuit
with Newsline report number 975 for release on Friday, April 19, 1996
to follow.

(*****
The following is a QST

The FCC orders a Louisiana ham off the air for two years and
downgrades a Washington State ham from Advanced to Novice. Is this a
new get tough policy against Part 97 rules violators? Find out on
Newsline report number 975 coming your way right now!

(*****
FCC SUSPENDS HAM LICENSE ON BROADCAST LANGUAGE RULE

The FCC has used the broadcast prime time rule that band the
transmission of certain words during a part of the day as one of
several reasons to suspend the license of a Louisiana ham. It is a
first and may well be the start of a new trend in private radio
regulatory enforcement.

The FCC has taken seriously a get tough policy with hams who violate the Part 97 Amateur Service rules that was requested by the American Radio Relay League. The ARRL recently told the FCC that it wanted ham licenses suspended and on April 5th, the FCC did just that to the Technician Plus license of Irvin J. Foret Jr, KB5UJD, of Metairie, Louisiana. This, after receiving numerous complaints about interference to Amateur Radio operations in the New Orleans Louisiana area.

The action comes after FCC investigators monitored and documented Foret's transmissions in December 1995 and January 1996. The FCC says that some of Foret's transmissions on January 29th, 1996, constituted willful or malicious interference to the transmissions of other Amateur Radio stations. This, in apparent violation of FCC rules.

The FCC says that during an inspection of his station, Foret was lacking in candor. That he misrepresented material facts to Commission personnel by stating that he did not make the transmissions that investigators had observed.

The FCC also says that some of Foret's transmissions were unidentified, included music or were obscene or indecent. And here is where the FCC really gets tough. It literally invoked the famed prime-time rules it uses to govern the activities of commercial broadcasters. The one that limits the transmission of certain language to specific hours of the day. The FCC claims that the alleged indecent transmissions occurred at a time when there was a reasonable risk that children could be listening in. That's the so called prime time rule and its the first time that this rule has been invoked in a case involving words allegedly spoken over the air by a ham radio operator!

As a result of its investigation, the FCC has suspended Foret's license for two years. It has also ordered a final determination based on the issues in the case and whether to impose a fine against Foret.

If Foret files a timely request for a hearing or a written statement, the suspension of his operator license will be held in abeyance pending a Commission decision. Otherwise, the suspension order takes effect within 30 days of his receipt of the FCC's order.

At air time, it is unknown if Foret has filed any appeal.

(*****

FCC BUSTS WASHINGTON HAM BACK TO NOVICE CLASS

In a most unusual case that hinged on his driving proficiency, Arthur P. Baumgarden, KI7CW of Bingen, Washington has lost his bid to retain his current license grade. This, after the FCC concluded that Baungarden obtained his Advanced class license improperly and refused to review that decision.

Baumgarden, 62, said he successfully upgraded to Advanced during a 1991 test session in Carson, California, a round trip of more than 2000 miles from his home. According to the FCC, he later told a Commission informant that he obtained his upgrade -- and we quote -- "through payment of money, without passing the required examinations."

When the FCC questioned Baumgarden, he denied the allegations. The FCC then asked Baumgarden to take a retest under another Volunteer Examination team. Instead he refused and appealed.
FCC records indicate that Baumgarden changed his story after the FCC first took issue with his version of events and especially with the travel times he supplied. In part, the Commission expressed disbelief that Baumgarden could have driven to Carson, California, and back in the times he claimed. They called the alleged travel schedule impossible to achieve within the speed limit. Even more so when Baumgarden said he made the journey in his recreational vehicle. The Commission also says that Baumgarden failed to corroborate his tale or to adequately explain why he provided two versions of events.
Although Baumgarden continues to deny he obtained his amateur license improperly, on March 18th the FCC concluded that his denials are not credible" and refused to review the case on both procedural and substantive grounds. The Commission order says that because Baumgarden declined to appear for retesting, his operator license would be reduced to Novice and his call sign changed to one appropriate for that license class.
Baumgardens' only options now are to accept the suspension or take the matter into the federal courts.

(*****
RFI PREVENTION

The American Radio Relay League has again criticized the FCC for failing to act to end TVI and RFI. The League says that the FCC continues to focus on the symptom rather than the cause of home electronic equipment interference, even though it has authority to mandate change.
The League is again urging the FCC to require manufacturers to put notices on products indicating they are subject to harmful interference. It also wants to see information provided on interference resolution and names of contact representatives for resolving RFI problems.
The ARRL says that it is not optimistic that the FCC's pilot project of a privatized interference resolution program would work. This, since it puts the burden of resolving the interference problem on the consumer and not the manufacturer.
The League recommends establishing a cadre of volunteers who would use their skills to resolve interference problems involving other radio services. This says the ARRL only provided that the volunteers are guaranteed some protection from lawsuits.

(*****
A UNIVERSAL LICENSE

The ARRL says that the FCC can save money by instituting a universal ham radio license. In reply comments on an FCC budgetary issue, the ARRL suggests the FCC reduce its administrative burden by adopting an Petition for Rule Making, RM-8677, which asks the agency

to implement the Inter- American Convention on an International Amateur Radio Permit. This the League says could eliminate the burden of processing reciprocal license applications of hams visiting from elsewhere in the hemisphere.
The ARRL also suggests that the United States take advantage of the European Conference of Postal and Telecommunications Administrations' CEPT Recommendation arrangements and issue a universal license that would be recognized by other participating administrations and valid for visits.

(*****
SPOC LIVES

The committee of repeater coordinators drafting a Memorandum of Understanding that will be submitted to the American Radio Relay League says that the final version will be made public shortly. According to a release from the committee through Whit Brown, WB0CJX, the Memorandum along with Articles of Incorporation and Bylaws for the National Frequency Coordinators' Council should be ratified by the time this newscast goes to air.
Brown notes that the ham radio media has been most patient in awaiting the final documents to be released. He says that the committee is appreciative for the restraint shown by the press during in the process. This says the committee minimized any premature impressions that may have been perceived during the formulation of the documents and that of the concept of a Single Point of Contact to the FCC on repeater coordination issues.

(*****
FCC OKAYS OLYMPIC CALL SIGNS

Some good news and some questions about ham radio and next summers Olympic games. Bella Romain N4ILQ reports:

"Hams operating within the state of Georgia may use special call signs from April 15 until August 31, 1996, to commemorate the 1996 Olympics. The question is, will the Olympics let ham radio commemorative operations using the Olympics name take place.
The permit for hams operating in Georgia comes by way of a Special Temporary Authority grant issued by the FCC. Under the plan, any FCC licensed radio amateur operating in Georgia with a "4" in his or her call sign may replace that number with "96" representing the year or "26" in commemorating the 26th Olympiad. That's the simple part.
Here is the part that's complex.
Hams with any regional prefix identifier number in their call signs and operating within the State of Georgia may also add Zero Zero to the existing number to mark the centennial year of the Olympic Games.
How complicated is it? The ARRL put out a bulletin and gives the example using WA4BKD in Georgia. During the Olympic STA he could also could identify as WA96BKD, WA26BKD or WA400BKD. An out of state license holder like NG3K, when operating portable in Georgia could identify only as NG300K or simply as NG3K.

The STA springs from an initiative by James Altman, N4UCK, of Atlanta and the Georgia Amateur Radio Operators Group he organized. They had support in this effort from the American Radio Relay League. But there is still one unresolved question. Its no secret that the Olympic Games have become a very commercialized venture. As such, the Olympic organizers have issued a blanket ban on any unlicensed promotional use of any words or terms associated with the games. It is unknown if any special exemption will be granted to hams who want to run Olympics commemorative stations using reference to the 26th Olympiad name." N4ILQ

The Olympics start in July. As previously reported, radio amateurs have been barred from carrying any sort of radio gear into any venue while attending the 1996 Olympic games. Even broadcast personnel assigned to the games have been told that no commemorative operation of ham gear will be allowed as it has been permitted in years past.

(*****
NEW VICE DIRECTOR FOR DELTA

Henry R. Leggette, WD4Q, of Memphis, Tennessee, has been named to serve as vice director of the Delta Division through the end of 1997. He fills the vacancy created in January when Rick Roderick, K5UR, became director upon the election of Joel Harrison, WB5IGF, as an ARRL vice president.
Legette, who's 56, is a supervisor electronics technician for the Federal Aviation Administration. His team of 13 technicians is responsible for repairing the equipment and software used by air traffic controllers. A life member of ARRL, he previously served as vice director from 1989 to 1991.

(*****
HALLER TO SPEAK

FCC Deputy Wireless Telecommunications Bureau Chief Ralph Haller, N4RH will be the keynote speaker at the April 25th Radio Club of America breakfast. The RCA breakfast was set to coincide with the 1996 International Wireless Communications Expo at the Hilton Hotel and Convention Center in Las Vegas, Nevada. Haller's breakfast speech will take place between 7:30 and 9 am.

(*****
LAMBDA ARC ANNOUNCES FORMAL ARRL AFFILIATION

The Lambda Amateur Radio Club is now an ARRL affiliated radio club. The Philadelphia based Lambda describes itself as a public service oriented ham radio club for gay, lesbian, bisexual and transgendered hams. Notification of the formal affiliation came from ARRL Field Services Manager Rick Palm, K1CE. Only a few years ago, the ARRL and Lambda were involved in a legal battle after the Lambda group claimed discrimination because the League refused to run the club add in the classified section of QST magazine.

(*****
MERRILL EIDSON, W5AMK, SK

The changing of the guard continues with word of the death of Merrill Eidson, W5AMK on February 5th. For years Eidson ran Eidson Crystals from his home in Temple, Texas.

(*****
JAMES E. McKIM, W0CY, SK

Jim McKim, W0CY, of Salina, Kansas, died February 14th at age 80. A life member of AMSAT, ARRL and QCWA, McKim had been involved in satellites since the launch of Sputnik One in 1957. He was also regarded as a pioneer on the VHF and UHF bands.

(*****
BEACON UPDATES

KE2EDI says that he has been running a 10 Meter beacon on 28.286 MHZ since 1979. In looking through the beacon listings in the ARRL "Repeater Directory", he notes that the listings are at least ten years old. He says that some beacons listed have not been on the air for that long, or longer.
As a result, he is asking that anyone hearing Ten meter beacons please jot down the call, frequency, ID cycle and any other info that they know about the beacon, and send it to him on packet to BEACON @ ALLBBS. Hopefully, this will allow those interested to get a "real-time" beacon list of what is really out there on the Ten meter band.

(*****
AROS RETURNS

From overseas, word that the Radio Society of Great Britain intends to recommence the Amateur Radio Observation Service, or "AROS", and a new volunteer administrator is now required. RSGB members interested in applying should in write to the Chairman of the LAC in care of RSGB.

(*****
FAIRS

The Floyd, Virginia based Foundation for Amateur International Radio Service will operate KK4WW, US5WE, BY1QH, 8R1WD and S21AM in their own countries on May 11th and 12th to celebrate the 5th anniversary of the organization. Listen for these call sign in the General portion of 40, 20, and 15 meters. For a certificate QSL with a 9 by 12 inch SASE envelope to FAIRS P O Box 341 Floyd, VA 24091

(*****
DX

In DX, word that 3W6GM, went QRT from Vietnam on March 31st and has returned to Germany. QSL via DF5GF.
Also, 5R8EN, continues to be active from Madagascar daily on 40

meters for the West coast USA stations. Look for him on 7057 kHz while he is listening on 7240 kHz around 14:15 UTC. He will give CW QSO's on request but cannot operate between 7000 and 7050 KHz due to the local restrictions. QSL via F6ARA.

The Team Selection Committee of World Radiosport Team Championship Games has announced selection of the 10 wildcard team leaders. Each team leader now must pick an operating partner from anywhere on the team leader's same continent.
The WRTC, set to begin July 13th and will pit over four dozen two person teams comprised of some of the world's top contest operators in a head to head competition during the IARU High Frequency World Championship contest.

(*****
WORLD CLASS FOX HUNT

Southern California's second international style ham radio fox hunt takes place Sunday afternoon May 5th in La Mirada, California in association with the 1996 West Coast VHF/UHF Conference. According to Joe Moell, K0OV, this will be an all on foot fox hunt contest open to anyone of any age who has registered at the Conference.

"When we had our first International fox hunt last year during Labor Day at the ARRL Southwest Division Convention, 40 hams signed up to participate. Two came all the way from Maryland to the convention just to be in the fox hunt.
This time the hunters will have the option of being on teams. We think the team competition will bring out even more hunters." K0OV

Joe says that families are welcome, but all entrants must compete independently and each entrant must bring his or her own direction finding equipment. All transmitters will be on two meter FM. There will be separate divisions for various age groups, with prizes for winners in each division.
The 1996 West Coast VHF/UHF Conference will be at Gateway Plaza Holiday Inn, 14299 Firestone Boulevard, La Mirada, CA. More info on the conference is available from Southern California Six Meter Club, PO Box 10441, Fullerton, CA 92635.

5735. Re: I don't recomend Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-20 00:00:00 UTC
From: Jesse Royall <jro274@airmail.net>
Message-ID: <4laq53$pqh@news-f.iadfw.net>
Source record: 227337

You know, I have had my license for over a year now. I have used
2 Meters, 70cm (which is enjoyable), and 6 Meters (which has its ups
and downs). I used to have fun with it... Talk halfway across Texas with
50 watts and a 5/8 wave antenna on the mobile, making FM contacts all over
the place. It was a challenge and a hobby back then. Now, since I have
moved to Dallas, its no longer a Hobby, it has become torture. When
someone asks what kinda antenna I got on my Truck I tell them and then
they ask what it is like. And I tell them the Truth. Here in Dallas it
has become the CB of the 90s. I know we are suppose to police ourselves
but, one person can't do it by himself. The locals around here just say
ignore the Problem and it will go away. Well, I have been here 6 months
and we have gone from 1-2 people Overpowering/ Bad mouthing/ Dead keying/
ect to now a group of people.... well, Ignoring the prob has really helped
down here in Dallas.... In Fact, it has put people on the edge where there
are no longer anymore chats about this, that, and the other. they just snap
at each other.... These people they ask me about amateur radio I just tell
them it is cheaper just to buy a CB. Atleast there you can buy a radio for
$20 and be on the air.... where as 2 Meter it is $200 for a 50 watt radio
or a HT and still get all the language... you havn't helped yourself one
bit...just in debt.... Now I have thought about HF, and I have talked to
friends that are on HF, and they say at times its just like CB and 2 Meters
you have the same people down there....(No use trying to get away...)
Would have been nice if you had to have a license in order to buy Amateur
Radio Equipment to knock out alot of this non-sense... I know what you are
thinking.... Yes, we do have those amateurs that do the same. I have tried
different bands 70cm (where I hang out till I get kicked off the repeater)
at which most are closed now days or linked. It has proven to be a great
little band at times... I still get out and do alittle chatting over long
distances (Not as far though). and I have gone to 6 Meters but we all know
that band here today gone in a minute..hehe..
The only place where I can have anytype of chat with polite people is on
2 meter SSB..(No probs down there) That is only because a All mode is about
$900 to $3000 and no-one is going to spend that kinda money for a radio
just to harass people (well that is what I thought when I got in Amateur
Radio....)
Now, I know that the prob isn't in Dallas only.... But, what can we do??
Would like to hear what other people are doing and what bands to try. Its
to the point that it is no longer a Hobby or fun...

Well, I know that this message is alittle long and alittle whiney but, when
you have bad weather and a Races Net going its no laughing matter....
We had this prob last night and had alot of damage from high winds and
these problem childs decided it was time to play.. So I do appologize for
the dumping of a message and such.... BUT, I WILL NOT RECOMMEND AMATEUR

RADIO to anyone that asks me....

5736. Special Event Station, Sunday April 21.

********** SPECIAL EVENT STATION **********

The Valley of the Moon Amateur Radio Club, WB6DWY, will be operating it's annual Special Event Station commemorating the City of Sonoma and the Valley of the Moon's rich historical heritage on Sunday, April 21 from 1700 to 2200 UTC, during the club's annual ARRL hamfest.

The Sonoma Valley, known as the Valley of the Moon, is the home of the famed writer Jack London, author of "Call of the Wild", "Sea Wolf" and "White Fang". It is also the site of the northernmost Spanish Mission and garrison, and of the Bear Flag Revolt of 1846 which signalled California's independence from Mexico.

The club's Special Event Station, WB6DWY, will be in operation on 20 and 40 meters at 7045, 7250 and 14250 Mhz +/- during the hamfest. QSL to VOMARC, 358 Patten St., Sonoma, CA 95476 with SASE for the event certificate.

Please join us!

5738. WW2END Special Event QSLs

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-20 00:00:00 UTC
From: scanware@sincom.com
Message-ID: <4lavsb$dui@news.cais.com>
Source record: 227340

From: KG7XD, QSL Manager, WW2END Special Event
To: All interested hams

Subj: QSL status from WW2END Special Event

Fellow Hams:
As you might well imagine, the WW2END Special Event, commemorating the 50th anniversary of the signing of the peace agreement with the Japanese aboard the USS Missouri was a huge success. There were over 4900 individual QSOs. To date, several thousand QSLs have been received and a majority of them have been answered.
We are now getting down to the last several hundred and these are those which are somewhat of a problem. We have SASEs without callsigns. This means that the database must be searched individually for each name and a QSL label generated. One complication arises when the name is found in several places in the database from either multiple QSOs or even worse...several hams with the same name.
The following list of names are those hams who have sent us an SASE which does not have a callsign attached to it. If your name is on this list, your QSL will be sent much faster if you can identify yourself to us with your callsign. If you made a contact with WW2END and have sent us an SASE but you have not yet received your QSL we apologize for the delay. If your name is NOT on this list, don't worry. Rest assured that the project is on-going and you will eventually get your QSL.
If your name is shown below...DO NOT send us another SASE, simply send an email with your Callsign as the subject, and your correct mailing address in the body of the text. No other information is needed...and in fact any other information will only waste bandwidth and slow us down.

==========
The smoke particles are slightly volatile, and will eventually
evaporate. You can remove most of them by washing the cabinet/chassis
parts you can get at easily (damp slightly soapy cloth). Then rely on
moderate heat to do the rest. A month in my attic in July would
probably do the job.

I apologize. I had meant since the inception of th VE program. But,
also, the conditional was not intended to allow someone to cheat as
has been suggested here.

Within 10 years thre will be no more 'ham' radio. The government will make several billion dollars selling the frequencies to Pizza Hut and Radio Shack. No one willl miss it either. Morse code is as dead as Samuel Morse, and requiring it to be learned is keeping millions away from the HF frequencies, so enabeling the destruction of the hobby. Right now, a good listen th 3, 7, 21 Mhz will reveal a bunch of really old men talking about their various physical ailments: whether Preparation H is realy good at relieving Hemmorhoids, prostrate problems, digestive problems (a ham was whining because he was farting too much), gall stones, etc.

Hell, within a decade most of these geriatric cases will be silent keys anyway. Ham radio is NOT an exciting hobby for todays youth, and can no way compete against computers, motorcycles, or fast girls... :)

HAm radio is DEAD unless something radical happens.

Their Techs don't know what they should..from my understanding they are
starting in the repair business and so the "Techs" are so called being
trained....Now, I don't know this for a fact, but that is my understanding
when I go in their.... I bought a TM-255a several months ago and had so
probs with it and so I did the common thing and called Tuckers... Well,
they did not know what the prob could be (OF Course I didn't take it in...
I knew better). I asked them how the unit should act and if that was normal
Well, the response was that they didn't know anything about that radio...
My Response was that they sold the product why not?? They just gave me the
long distant number to Kenwood and told me to call them...hehe...
Kenwood was another Joke and a Half.... But, the radio seem to fix itself
after a week or so.... But, like I said, Tuckers seems to be just getting
into radio repair..... I know they were highering techs in Jan. so who knows

Don't expect techies at any RS. Just someone who has a clue and is not trained to deceive an unsuspecting public to buy whatever is on sale. What if that was the case at your neighborhood hardware store or grocery. You needed help, they'd turn pale, gag a little and hand you a catalog. No I generally don't need a techie. I need someone who knows something about the products they sell that are not on sale that week. Someone who actually knows whether they even have a product that might be useful to me.

I don't expect much from RS and they don't even work up to that standard.

Not too sure why you would need it's actual *calculated*
inductance, but rather than try the mathematical model,
I would first tie a fairly precise cap across it and find its
resonant frequency. To be dead cert, do it again with
another (different) cap, record resonant freq again.

F = 1/(2 pi sqr(LC)). A little algebra to extract L.

Maybe I'm not the one to ask, left Sydney almost 10
years ago, and lived in Northern suburbs at that.

But I do remember there was a ham club at Fishers
Ghost, I *think* there may have been one in W'gong
itself, and still another one in Hurstville. Try giving
a shout on 2m (don't worry about going portable with
your US call - nothing will happen, guaranteed).
Phone the WIA office in Parramatta, they should
have a list of some of the club officers, or at least
data on when/where some of the clubs meet.

A lot of people on welfare today have a 'mental block' when it comes to working, but as long
as we keep giving them what they want, they just keep taking it. Seems the same is holding true for good ol' amateur radio. Doesn't really matter though, since all I have to do these days is shout 'hearing problem' and I get a code free...what?...Advanced or Extra? Why work?

By the way, I wonder if that guy ever sold his gear...

sorry for the crossposting but I REALLY need help with this.

Ok I've just blown the SD1272 that is in the Ramsey PA-1 Kit. Now of course I'd like to replace it. I've heard that the Motorola MRF-239 can be used as a direct replacement of it but I'd like to know if there are any other MRF transistors that will give a higher output power. So if any of you have the Motorola RF Transistor book, I'd very much apperciate the specs on the MRF-239 and whatever other transistors I can use in the PA-1. thanks in advance

With this kind of logic, I'm surprised that hand-cranking a model-T is not
a requirement for getting a drivers license!

Morse code is a fine sideline for those who are interested... nothing
more! I would think that knowledge of modern communication theory would
be more relevent (not really... amateur radio is for the most part an
appliance hobby)!

Subject: The ARRL Letter, April 19, 1996

The ARRL Letter
Electronic Update
April 19, 1996

IN THIS UPDATE . . ..

* W3A is a musical hit
* League pitches in for Phase 3-D
* ARRL says new rules unneeded in PR rule making
* First Colvin Award grant
* World-class foxhunt
* In Brief: No sunspots; special 9K5 prefix;
Amateur Radio Week

ARRL ANTES UP FOR PHASE 3-D

The ARRL has sent a check for $126,129 to AMSAT-NA, thereby fulfilling the League's financial commitment to the Phase 3-D satellite project. In all, the ARRL has contributed $523,703 to the project. This includes $363,022 raised from members during two fund drives and $161,681 from the ARRL itself to match individual contributions received during 1995.

"While the Phase 3-D project could not exist without funding, the real heroes are the AMSAT volunteers in a number of countries who are donating their time and talents to the satellite's construction," said ARRL Executive Vice President David Sumner, K1ZZ. "If it were not for their dedication, Phase 3-D would still be a dream."

As it now stands, Phase 3-D is anywhere from 8 to 12 months away. The satellite is being assembled and tested in Orlando, Florida. (See "Phase 3-D Update," QST, Apr 1996, p 93).

The League is among the Phase 3-D project's six major financial contributors. The others are the Deutscher Amateur Radio Club, the German Ministry of Science and Technology, AMSAT-DL, AMSAT-NA and AMSAT-UK. The six organizations comprise the Phase 3-D Program Council, the steering group for the project. Once the satellite is in operation, the Program Council will determine the operating policy. Sumner attended the February 27 meeting of the Program Council in Marburg, Germany, at which the League was voted into

membership. ARRL President Rod Stafford has designated Vice President Joel Harrison, WB5IGF, as the League's representative at future meetings.

In all, 14 countries are participating in Phase 3-D. The L-band antenna reflectors, produced in France, arrived at the Phase 3-D Integration Laboratory site in Orlando, Florida, last month. Also arriving recently were the completed flight-ready solar panels from Germany, one of the X-band horns from Finland and the two specific bearing structures from Utah. The flight main battery and the X-band power amplifier are in Germany awaiting shipment.

Individual contributions to the Phase 3-D effort are encouraged and welcome. Call AMSAT-NA, 301-589-6062.

W3A AUGMENTS "RADIO MUSIC" PERFORMANCE

More than 1500 stations in the US and abroad got into the logbook of special event station W3A the weekend of April 13-14. Activated by members of the Potomac Valley Radio Club, W3A operated from the National Academy of Sciences in Washington, DC, as part of a combination musical and historical event commemorating the 95th anniversary of Marconi's first transatlantic transmission and the 75th anniversary of NBC.

W3A had two HF positions plus VHF and UHF packet set up in the academy's Great Hall. Antennas included a tribander and inverted Vs for HF. W3A was the first 1-by-1 call sign authorized by the FCC in many years. Robert Teitel, W3IDT, a George Washington University professor from Chevy Chase, Maryland, organized the special event station; Michael Cizek, KO7V, of Severn, Maryland, recruited most of the operators. Guest operators included Joseph Taylor Jr, K1JT, of Princeton, New Jersey, who won the Nobel prize for physics in 1993, Bob Bruninga, WB4APR, of Glen Burnie, Maryland, and Valery "Larry" Agabekov, UA6HZ/WJ1R, of Vernon, Connecticut. Agabekov is past president of the Union of Radio Amateurs of Russia. Teitel reports the Special Temporary Authority from the FCC to use W3A arrived just five days before the event.

In addition to Taylor and Teitel, composer Peter Schickele (otherwise known as P.D.Q. Bach); FCC Chairman Reed Hundt; and NAS Vice President Jack Halpern, a former ham, were among those participating as performers in a special musical piece entitled "Radio Music." The work employed eight vintage radios as "musical instruments" Leonard Schachter, N3RPQ, and the ARRL furnished the radios used in the performance.

ARRL Media Relations Assistant Jennifer Hagy, N1TDY, also was on hand to talk with concert-goers about Amateur Radio.

ARRL SAYS NEW RULES UNNEEDED IN PUERTO RICO RULE MAKING

An FCC proposal to require applicants for new or modified ham radio repeaters or beacons within 10 miles of Puerto Rico's Arecibo Observatory to provide the observatory with technical parameters before operating has drawn fire from the ARRL. Responding to the FCC notice, the ARRL said a cooperative atmosphere already exists between the Arecibo

Observatory--operated by Cornell University--and the Puerto Rico Amateur Radio League. Creating additional regulations "drives a completely unnecessary wedge in the middle of a perfectly good working relationship without the slightest technical justification," the League said.

The ARRL's filing said the FCC proposes more narrow restrictions on hams in Puerto Rico than the observatory originally requested. Cornell had asked that the Observatory be permitted to determine within 20 days of notification of a new Amateur Radio repeater or beacon whether or not to oppose the plans based on interference potential. The League expressed concern about the response of the observatory to the notifications and questioned the standards the observatory would use to evaluate a proposed repeater or beacon. The ARRL said a valuable emergency communication system in a hurricane-susceptible area should not be restricted "on the strength of no more than an inchoate, unquantified fear of possible future interference [to the Observatory]." The ARRL noted that the FCC does not propose to regulate Civil Air Patrol repeaters, even though "they are indistinguishable from amateur repeaters in many cases." The FCC's notice also fails to mention the Military Affiliate Radio System. The proposed regulations would exempt frequencies above 15 GHz.

The League asserted that since there is no evidence of interference and, because all parties involved can coordinate new or modified facilities informally, no new regulations are needed. The PRARL and the observatory already have tentatively agreed to cooperate in notifying the observatory about new Amateur Radio facilities. "Amateur Radio should have no regulatory restrictions, other than those already contained in the amateur rules, to protect the observatory from spurious emissions outside the amateur bands," the League said.

FIRST COLVIN AWARD GRANT TO WRTC

The first ARRL Colvin Award grant has been made to the World Radiosport Team Championship 96 Inc. The $5000 award will help support the WRTC event to be held in the San Francisco area July 13-14. The event, featuring HF competition among 52 two-member teams, is being held in conjunction with the IARU HF World Championship Contest. ARRL Executive Vice President Dave Sumner, K1ZZ, plans to deliver the grant to the WRTC-96 officers and directors at Visalia, California, this weekend.

The Colvin Award was established in 1994 with the proceeds of a life insurance policy purchased by Lloyd Colvin, W6KG, that named the ARRL as beneficiary. The award is conferred in the form of grants in support of Amateur Radio projects that promote international goodwill in the field of DX.

The first WRTC competition, with 22 competing teams, was held in Seattle, Washington, in 1990. Eleven competitors from the 1990 event--including defending champions K1AR and K1DG--are returning for this year's event.

WORLD-CLASS FOXHUNT COMING TO CALIFORNIA

An international-style foxhunt on May 5, 1996, will be part of the 1996 West Coast VHF/UHF Conference in La Mirada, California. ARRL Lab Supervisor Ed Hare, KA1CV, is among those scheduled to speak at the conference. He'll discuss TVI and the Amateur Radio operator.

"Foxhunting" or "foxtailing" for hidden radio transmitters is a very popular radio sport around the world, but it's done differently from the typical US hidden-transmitter or "T-hunts," which often are conducted from vehicles, with perhaps a short on-foot search (called a "sniff") at the end. International-style foxhunts are done on foot in big wooded parks. Five or more "foxes" transmit in sequence for a minute each. The first hunter to locate all foxes wins. Youngsters in many European and Asian countries do foxtailing as part of their physical education programs in school. A world foxhunting championship takes place in Europe or Asia every three years.

For the California event, all transmitters will be on 2-meter FM. There will be separate divisions for various age groups, with prizes for individual winners in each division. There also will be team prizes. All entrants must compete independently, and each entrant must bring his or her own RDF equipment. For more information and ideas, check out the VHF/UHF Conference Web site at http://ourworld.compuserve.com/homepages/kc6yhm, provided by Mike Cramer, KC6YHM.

The foxtailing contest offers cash prizes and trophies to winners. The event is open to anyone who has registered at the conference. It's being organized by the Southern California Six Meter Club. For more information, contact Joe Moell, K0OV, at HomingIn@ aol.com or at 75236.2165@compuserve.com.

IN BRIEF:

* Tad Cook, KT7H, reports no visible sunspots for April 5-10. He predicts this is the start of the sunspot minimum and that solar flux should bottom out later this year, instead of in early 1997 as previously estimated. The new cycle is projected to peak in April 2000 with an average solar flux of 192. Flux numbers, which have dipped below 70 in recent days, should rise above 70 for April 18-24, but drop below 70 after May 3.

* A special 9K5 prefix will be in use for Kuwaiti amateurs until May 7, 1996. The number 5 in the prefix is to call attention to the fact that POWs from Kuwait have been held in Iraq for more than five years.--Hamad Al-Nusif, 9K2HN

* June 16-23 is Amateur Radio Week! This annual event is an excellent opportunity to create public awareness, generate media interest and of course, publicize the culminating event: Field Day! Setting up demonstrations, giving talks, or having your town mayor or state governor proclaim the week are just some of the activities hams typically do leading up to Field Day. Letting people know what the hobby is all about and the valuable service hams provide in times of disaster is the name of the game, and it's not too late to get started. To get your Amateur Radio Week/Field Day publicity kit, call ARRL's Public Relations department at 860-594-0328 or send e-mail to jhagy@arrl.org.

Anyone get in on that deal??

I have noticed that have stopped advertising it in the Mags from what I have seen.... Was just curious as to know if anyone has had any luck with it and its performance....

I have one matched to a TM-255a that seems to do about 8 watts. The only thing is I have no one around me to really test it... that and I don't have a outside antenna...(Which might help....maybe..hehe...)

Why perpetuate this stuff? Why further tarnish the image of ham radio with this constant bickering about code/no code? I've seen both sides point to "young people aren't interested in ham radio these days -- they instead are drawn to the Internet." Well, what are we doing to encourage those same young folks who just might be looking at these news groups for info about our hobby?

You know, reading most of this forum makes my stomach turn. Most of you people bicker and argue and piss and moan and that's all you do. You sound like a bunch of children in a schoolyard. Grow up. The reason I originaly sold most of me equipment was the mental attitude of people like those who have nothing positive to offer. Eventually a few friends convinced me that every bunch has some bad apples and I'm slowly coming back. To argue and debate things is fine, it's one of the ideals this country was founded on, but to do it in such a fashion that removes all honor and dignity is a dark spot not only on this forum, but on Amatuer Radio as a whole. People who are not hams read this forum and some of them form their first impressions of the hobby from it. I pity them, for they do not know what the're missing. The friendliness of the folks on the machine I frequent in my area (N. Delaware) are top notch. The conversations are always enlightening and stimulating. The operators, always gentlemen and ladies (and those who work this machine know which one it is). If only these people intersted in ham radio could have that as their first impression we would be a lot better off.

I know that probibly most of you feal the same way I do, most of you are good people. You are courteous and polite and like to engage in stimulating debate in a FRIENDLY way. This message is not directed at you. This is for the people (and they know who they are) who like to act like 5 yr olds with expensive toys and belittle others. The world would be a lot better if you just kept to yourselves or grew up.
I'm sure I'll get all kinds of nasty e-mail messages and response posts, but I frankly don't care. Nor will you recieve the hot and bothered vitrolicly worded response you so desperatley desire from me. I won't perpetutate the chain of events that leads to such things. I suggest everyone do the same. Those of you have the temper to ignore such folks, I applaud you. Those of you who don't, you need to find it. A lot of good people are drawn into petty arguments by letting their emotions get the best of them. Don't. Relax, The people who are agrivating you are doing it to solicit such a response. If the response is lacking, they will go away or grow up, and that's good for all of us.
73's to everyone and I hope this makes some people stop and reflect about their behavior here and on the bands.
Bill

>Now, I know that the prob isn't in Dallas only.... But, what can we do??
>Would like to hear what other people are doing and what bands to try. Its
>to the point that it is no longer a Hobby or fun...

its funny... i do a lot of travelling, and there are some areas where
the idiot index is much higher than others. Phoenix/Tucson has a lot
of open machines, autopatch and all, with very little abuse. L.A has
some X-rated machines, but like a porno shop, you don't have to go there
if you don't want to. The Bay, Portland, and Seattle generally have some
pretty interesting things happening. in much of the rest of the west, the
repeaters are very much under-utilized.

a lot of the chatter i here down on 80 meters about "pencil necked no-code
geeks" seems to come from people with '5' in their call. maybe its a
Texas thang?

Hi Gary, the PC is an *extremely* noisy environment. I personally wouldn't want my radio to be powered from the PC power supply or be close to a 200 MHz processor. How has the experience been so far with this product? One still needs an external box for an amp. I can control my ICOM equipment directly from a serial port on my PC. I really don't see the attraction.

I hate to post a reply to my own post, but I want to add a further comment.

When I was in university, I was in ROTC. We had M1 rifles to carry around and clean (I joined the ROTC band, so I want from 9 pound rifle to a 15 pound tuba).

One of the things we learned about cleaning the rifles was that one part (a gas slide chamber or whatever) could not be cleaned unless a non-comissioned officer was present! Why such a silly rule?

The answer was that non-coms were not to be around whenever you cleaned your rifle. As a result you could not always clean this part. And that is what the Army wanted. You see, if it were cleaned all the time, it would get WORN, the gas would leak, and the rifle would lose its re-cocking capability.

This is relevant. Suppose anyone who wanted to could become a ham. The frequency bands are a LIMITED resource. Lots of people become hams, since there is no talent required (as the illogical extension of the argument). Terrible crowding. Then you will have something else to complain about. But there will be no solace for ths, as there is simply no more room to fit hams on the bands.

So you see, it IS possible that some things that are perceived as a an impediment to access actually can have a purpose.
Barry

SB DX @ ALLBBS $OPDX.251
Ohio/Penn DX Bulletin No. 251

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 251
BID: $OPDX.251
April 22, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WB2DND, AC4NJ, KK6EK, NI6T, K8CX, K8MN, DF4RD, DL4FDU/NP2AQ, DL7VOA, DL9GOA & DX News Letter, F6EXV, G3USF, G4BUE & DX News Sheet, OZ8RO, SP5ELA, VE6SRC and VK1FF for the following DX information.

4K2, FRANZ JOSEF LAND. The DXNS would like to remind everyone that Sergey, R1FJZ will go QRT in August, and at this time he will pick up his QSLs from his mail drop of DF7RX.

9U BURUNDI. Jean-Pierre, F5FHI, has changed his call to 9U5DX. He has been heard on 17 meters CW/SSB recently between 0800 and 0930z. QSL via F2VX preferably via REF bureau. All cards are automatically sent via bureau when they receive diskettes from F5FHI. They are currently awaiting one disk with the last 9000 QSOs made as 9U/F5FHI. Also, Alfredo, 9U/EA1FH, is now signing 9U5CW, but we do not know if he has changed his QSL info. Recently, Jean-Pierre telephoned his manager to tell him both licenses were being mailed to France for relay to ARRL for DXCC acceptance. Peter, ON6TT, is planning a short visit before the end of April and has spoken to Alfredo about being active on 80 and 160 meters. Alfredo does not have antennas for those bands, but Peter will take his 160/80m vertical and PK900 with him, and there is a possibility of 160/80m and RTTY acitvity during the last weekend in April.

HOT! RUMOR OF THE WEEK.... A well known group of JA DXers (who was active as XY1HT) is scheduled for a visit to North Korea. They are trying to get a license similar to what they did at XY1HT. Keep your ears open and fingers crossed, and pray for sunspots!
Meanwhile, a Hungarian couple will be on tour to North Korea. Sanyi, HA7VK (ex-XU7VK and XU95HA) and his wife Judit, HA7RJ, will arrive in Phenjan (Phjongjang) on the 21st of May. Sanyi is currently looking for help to obtain a license in P5-land. He and his wife will be there until the end of July. KEEP YOUR FINGERS CROSSED!!!

J6, GRENADA. Eric, F5CCO, plans to be on the air between June 27th and July 4th (While on his honeymoon, BOY is he BRAVE!). QSL via homecall.

JUST A REMINDER! Begin looking for the TI9X DXpedition to start later this week (may be April 26th). Refer to OPDX.250.

JW, SVALBARD. Rag, OZ8RO, states he was bitten by the "polar bug" and will once again be active from here as JW5HE, May 1-5th. He will focus on the new bands (i.e. 10 MHz will most likely be most productive).

LIGHTHOUSE (FAL-03) DXPEDITION. On May 24, 25 and 26th, there will be a station signing the special callsign CT8FMX from the lighthouse of Ponta da Piedade/Lagos/Algarve. This operation is valid for "Portugueses Lighthouse Award" (REF number FAL-03). There will be activity on 80-10 meters. QSL via CT1FMX, Jorge, P.O. BOX 189, 2562 Torres Vedras, Portugal

HELVETIA CONTEST. This will take place next weekend, April 27-28th (Saturday 1300z to Sunday 1300z). Activity will be on CW/SSB 160-10 meters. This is a good chance to build up your Canton total for the Swiss Helvetia Award which requires confirmation from all 26 Cantons.

NEW BEACON. The 4X6TU beacon is now operational from Tel Aviv on 14100, 18110, 21150, 24930 and 28200 kHz with transmissions lasting 10 seconds every three minutes on each frequency in turn. Stepped power (max 100w) to vertical. 4X6TU joins ZS6DN, LU4AA, YV5B, on these frequencies and with the same transmission pattern.

OH0, ALAND ISLAND. Dave, currently signing OH2/K8MN, will be heading for OH0 this coming Friday, April 26th, and will be on the air from evening (probably 2200z) through mid-Sunday (will QRT around 1300z). He will be taking an amp and plans to be as active as he can be on all bands/modes. He is also planning to take RTTY gear and will make every effort to hand out QSOs on that mode. Look for him on CW at least 25 kHz up from the bottom (so as to give U.S. Advanced/General gang a shot) when he is looking toward North America. On SSB, wherever he can find a spot where that he doesn't interfere with a net. QSL via WA8JOC. Bureau cards can go to his U.S. call ONLY for this trip. Any QSLs which come to Finland will be answered very, very late since Dave will forward them to WA8JOC.

P4, ARUBA. Tom, K8CX, will be active as P43WLP (but was hoping to receive the callsign P40CX) until April 27th. He told OPDX that he would be active on 9 HF bands. QSL via K8CX.

TO3, REUNION ISLAND. The DXNL reports that Bernd, DL1VJ, and Heinz, F5NRG, will work as TO3R during the CQWW WPX CW Contest (May 25-26th). Before and after the contest they will be on the air as FR/homecall. QSLs via F6KLS (French bureau) which is the clubcall of the SL-DX-Club.

"QSLs for EY8/NP2AQ, EZ0AA, EK9RM, 4L0MR and DL4FDU must be sent to the following APO address," states Ron, DL4FDU/NP2AQ. Cards sent to the callbook address of NP2AQ will be returned since he has been away from that QTH for 5 years. QSLs must be sent to Ron at the following address: Ron Maples, PSC-115 (ESC), APO AE 09213-0115

QSL UPDATE. According to Bob, KK6EK, all the direct QSLs for XR0Y and XR0Z have been sent out, a total of almost 20,000 cards. A separate card was generated for each QSO. Each card was preprinted with the general information about the project, then over-printed with the QSO information and the barcode. ADDED NOTE: All OPDX InterNet Subscribers will receive an additional bulletin containing Bob's press release.

UPCOMING IOTA CONTEST ACTIVITY. Eric, F5CCO, states he and others will be active for the IOTA contest the last weekend of July, from EU-095 (ME-004), Planier Island located in the Provence-Cote D'Azur Region Group. For the contest all operators will be signing with the home call: F6JSZ/P on CW, F5CCO/P on SSB and F1IXQ/P on satellite. They plan to be active on all bands including the satellites. QSL via the bureau or to the following home call addresses: F6JSZ - Mark A. Kentell P.O BOX 76, 19002 Tulle Cedex, France // F1IXQ - Michel Gueugnot, 208 Rue de L'oradou, 63000 Clermont Ferrand, France // F5CCO - Eric Fayolle, P.O BOX 29, 43300 Langeac, France.

VK9C, COCOS-KEELING. Operators VK4FW (ex-VK4CRR), VK2IVK (YL), VK4DHM, and possibly more will be active May 18-31st. The callsign will be announced at a later day. Operations will be on all HF bands with activity primarily on SSB, with the possibility of some CW activity. QSL via VK4FW, Bill Horner, 26 Iron St, Gympie, QLD 4570, AUSTRALIA

VK0, MARQUARIE ISLAND. Warren, VK0WH, usually can be found only on Monday, Tuesday or Thursday, operating 40 meters CW. Check around 7009 kHz between 1000 and 1100z for Warren and he usually listens up 3 kHz. Also, he does sometimes shows up on 14260 kHz (or 14038) with his QSL Manager. He is reported to be there until December of 1996. QSL via VK9NS.

VP2E, ANGUILLA. JH4IFF and JH4EZI will be active as VP2EFF and VP2EZI, respectively, April 29th through May 3rd. Operations will be on 160-10 meters on CW/SSB/RTTY. There is also a slight chance that JH4IFF will be active also as FS/N2HNQ afterwards.

YI, IRAQ. ZYGI, SP5ELA, from the Warsaw University of Technology RC (SP5PBE) reports that Tom, YI9CW, (Bagdad,Iraq) continues to be active daily until May 20, 1996. His prefered frequencies: 7007/14007/21007/28007 and WARC 30/17/12. 160/80 meters operation is not allowed at this time in Iraq. After 5 years of being in Iraq, Tom will depart at the end of May to Amman and later to Warsaw, Poland. All QSL requests go to: Tom Rogowski, SP5AUC, P.O.BOX 11, 02-800 WARSAW 93, POLAND. Do not lose the chance to work this rare one on CW!

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should

be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

> general direction at any moment.
<snippity re: more good stuff about how nasty these things are>

Agreed. Here begins the reading from the apostle Deaton, who may get flamed but intendeth nothing but good will:

This also goes for folks who, instead of seeking shelter IMMEDIATELY, instead run to the closet--but don't get in--and drag out the trusty VHS or 8mm camcorder. "HEY ETHEL...WHERE ARE THE BATTERIES?"

It's a tremendous risk.

As a photojournalist for a local TV station I often run into people who have run outside to shoot video of the storm or the aftermath. 99% of the time they've risked their lives to shoot fuzzy pictures of trees and shingles so they can add it to the video shelf. Even if the storm has passed, downed powerlines (often invisible in the darkness), flying debris--tin, nails, glass--and the possibility of other funnel clouds forming, WILL kill or maim.

Disclaimer 'graf follows: As Camille said, this is not to flame Skywarn, nor the spotters who in fact form the backbone of our warning system. Not only does the NWS depend on them, but local TV/Radio depends on "ground truth" information as well (Gee, Gary, you mentioned only WRAL...there are other stations in the market) to get information out quickly to viewers/listeners. I'm a licensed Ham radio operator and know the importance of the skywarn net as well as the dedication of the hams who operate it. I supply reports as often as I can since I'm usually doing some storm chasing. (This may be the pot calling the kettle black, because I'm usually right out there in the middle of it--but it's what I've been underpaid to do for the past 10 years or so. Photogs train for it.)

In the excitement of the situation, it's really easy to "disregard personal safety". That sounds like a heroic thing, but it's just a short line in the paper or soundbite on tv describing a dead/hurt spotter or amateur videographer, and it means ZERO to their family. It's a free country. We get to do what we want to. But doing what may seem like a Good Thing(tm) doesn't insulate us from tragedy. What I've written isn't gonna disuade for one nanosecond anyone who is convinced they're gonna get good pictures or the ultimate sitrep for Skywarn, so hopefully it's a whack on the head and reminder to Be Careful, y'all, or get some training. I'm sure there are disaster survivors aplenty on tri.gen to add their .02 about what Mother Nature can do to a soft-shelled 170 lb humanoid. And severe weather

season is just beginning.

Bzzt. Sermon mode off. Crank up the choir.

Victoria Deaton

+
+Beats me. Maybe no one is there, because they spend all their time
+bitching about others not using simplex, instead of doing so themselves.
+
+: No need to flame the shit out of me.....I just stating my oppinion!
+
+The repeaters are only a tiny portion of Amateur Radio.
+
+Want a challenge? Try working 5BWAS CW on a homebuilt one tube transmitter
+and two tube regenerative receiver. For more of a challenge, use only
+dipole antennas.

Or for a real challenge use a couple of tin
cans and NO string!

I fail to see the point behind assertions that Amateur
radio lacks challenge due to arguments such as you
posted. Is new technology such that it can't be used
because it's too easy? How about establishing a packet
net with reconstituting partitioned networks? Or what
a couple guys I know did, and that's getting the
most distance out of their HTs by using their bicycles
as a groundplane?

I'm just bitter I guess. A couple of years ago when I
finally took a half-hearted stab at a no-code tech
license I passed the novice part of the exam, but failed
the tech part due in part to the fact that I could not
correctly name the US gov't agency that regulates exposure
to microwaves! Stupid me! I shouldn't have spent all
that time studying bandwidth allocations or electronics
theory ;-).

>Buddy Brannan, KB5ELV | PC-MATTIC

well, those of us that have been around this track before
(mistakes are easier to remember) know:

field day is the fourth weekend in june.

not the last weekend.

the fourth weekend.

the melbourne, florida, hamfest is the 2nd saturday in september as well.
not the weekend after labor day.

1996 is an example for both of these...

I believe he is asking about the DSP 100 from Comer Communications.
It occupies 2 ISA slots and is a complete HF transceiver with DSP
mod/demod. The mic and speaker jacks are on the back of the DSP card.
I don't know if it has a key jack or not. It is $695. Comer's
address is

========

Here's two more cents... I have had great luck with both the
Buckmaster and SAM CD-ROM callsign database programs. An important
feature to me is reliable callsign lookup interfacing for my Logic 4
logging program, and both do very well in that regard. And I don't

own any of those companies!!

Well, I'm jumping into the middle of this thread, because it's
crossposted to sci.electronics.design; I'm not a ham and don't read
rec.radio.*.

The main reason I'm not a ham is that I never got around to learning
the CODE... And actually I think that it's probably for the best; I'd
view an amateur license as a way to hang some interesting new hardware
on my PC and maybe use the local phone patch. If I were a ham and
guys like that started hanging around I'd feel like my stock was
diluted.

Yeah, code is pretty much obsolete today -- what with satellite links,
spread spectrum, etc. you can punch through anything. Even if I were
stranded on a desert island and had to build a sparkgap transmitter
powered by metal strips shoved into citrus fruit I could attract all
the attention I needed by sending any regular pattern. But the code
requirement is a good filter: There are too many "instant gratifi-
cation" types out there and we need to have a few places that still
have standards. (Even though the standards keep _me_ out, I still
support them.)

>the price range for a good HT, and you'll be getting quite a lot
>more radio for the money.

the first 2m rig i purchased was a icom 281. i then bought a HT202 when they were on sale, as a dedicated packet machine. while the Icom has more memories, and a few other 'features', the '202 seems to have greater sensitivity and a better sound. i find i use the HT more. if i were doing it again, i'd go for the HT202 and a brick, if i really needed more power. the Icom claims to be 9600 baud ready - now if i can find someone around here doing 9600 baud packet.....

RS has been putting the calls on the badges for awhile now. We have several
hams in our district with them. However, I think more hams notice the
screwdriver HF antenna on my car and the "Welcome Ham Radio Operators" sign in
the front window of my store :)

Frankly, I'm getting a little tired of the criticism directed at RS by some readers. Sounds to me like some of you expect an RS store to be staffed by RF design engineers who are also Extra class hams and who will give you everything for nothing. Remember that RS is not a technical outlet, it's a retail store. There *is* a difference (besides, what are all of you supposedly technically savvy electronics types doing looking for advice at a place where you feel the staff is incompetent?!?!). RS will get electronic tech types when they want to pay for them. Remember that retail operations aren't known for generous pay scales, and RS is no exception. Only those working in the big, busy stores make any real money (due to the commission-based pay plans).

My store *is* different in that I have a communications-electronics background, thanks to 20 years in the USAF and almost 24 years active in ham radio. I worked at RS part-time for awhile while in the military and enjoyed it so I went into management when I left active duty. Yeah, I'm overqualified but I like what I do, particularly solving minor technical and not-so-technical problems for folks who just aren't "into" electronics like most hams and hobbyists. I also ensure my staff is trained, knows what they're talking about, and can do the same - I see to it personally. We make every effort to help the customer and keep them happy - and we're (mostly) successful. However, I'm a realist and I know that my staff will probably move on when they get enough experience and knowledge to get a better (read "higher-paying") job elsewhere, and when I finally get tired of the excessively long hours and relatively low pay I'll probably do the same.

If you want "horror" stories, I could tell you about all the various scams some of our "customers" try to pull on us and some of the outright abuse we get, but that's another subject.

Remember there are two sides to every issue.

Those of you who aren't satisfied with your local RS - come see me! :)

Please stop posting this to rec.antiques.radio+phono. Our
charter specifically excludes ham radio.

You are a good example of why ham radio is a dying field. You
won't need your frequencies in the future since everyone is dying
off. But die somewhere else since your tedium bores everyone.

>Well, good buddy, you're not likely to find those on this newsgroup.
>That's CB lingo.

Horse feathers. It is also the lingo of current public services operators and is of more than just passing interest to SWL'ers and those who like to listen to their local police and fire departments on scanners. It was also the lingo of choice when I got started in 2-meter FM in Los Angeles some 35 years ago.

So before we automatically put folks down who are interested in the 10-codes, perhaps we could simply refer them to their local Radio Shack or other scanner dealer who will usually have a list of them available, along with a list of local PS frequencies. Perhaps if we can stop putting people down when they ask honest, well-meaning questions, we can loose the frequent image of being snobs with nothing but contempt for the great unwashed masses.

>
>73 de KC4WQ

Since you can squeeze so many more QSOs into the same amount of
spectrum with CW and the number of QSOs in the CW segments is so much
less the only logical course of action is to redistribute the bands
giving say 80% to phone SSTV data etc. The much more efficient CW can
easily get along or the remainder, heck the can even share with RTTY.
You can rest assured that it will happen it is obvious from the most
cursory scan of the bands that this should happen and happen soon.

Mike, sorry but your next opportunity for a "2 by 2" is when you
upgrade to Advanced. All Technician/General callsigns for us
8-landers have been issued. That's OK though, because you probably
will upgrade all the way to Amateur Extra if you want to badly enough
and keep studying and practicing your CW. I went from a Tech Plus to
Extra in less than a year and I certainly don't have the market
cornered in brains or CW copying ability. I even flunked a couple of
tests along the way! Hang in there and good luck. Hope to hear you
on the HF bands soon.

5805. Suggest Digital Requirement Instead Of CW

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-21 00:00:00 UTC
From: algollom@interlog.com
Message-ID: <4ldta6$s99@steel.interlog.com>
Source record: 227297

Morse Code IS a dying mode. I still operate on CW, but frankly find the digital modes much more satisfying.

Digital is the wave of the future. That's where all the growth is now. Just look at the Internet. Since digital is the growing technology of the day, why not incorporate that into the ham radio theory tests for those who would rather not do CW.

In order for us to maintain the frequency allocations we now have, the number of new hams must keep increasing. Rather than discourage them from the hobby by requiring knowledge of old technology, why not encourage them by learning the newest and fastest growing technology of the day. Help them realize that the Internet is not the only way to communicate with others around the world. Let them see the wonderful blend of computer technology and ham radio.

I'm not saying dump CW. I'm just suggesting that for those who do not wish to learn it, we should require them to learn something else in its place - in this case, digital technology. This way we do not make the requirement any easier, but instead encourage aspiring hams to learn something with a little more relevance to today's technology.

Things change and we have to keep up with the changes or the hobby will shrivel up and die.

5806. LAMBDA: An ARRL- Affiliated Club?!?!?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-22 00:00:00 UTC
From: Patrick Cook <pcook@nexus.interealm.com>
Message-ID: <Pine.SOL.3.91.960422223157.4724F-100000@spieg.interealm.com>
Source record: 227098

Hi everyone:

I just heard the newsline report tonight and was APPALLED (not to mention DISAPPOINTED) when I heard that Rick Palm, K1CE, announced that LAMBDA is now an ARRL-AFFILIATED CLUB!!! :(

Let me just say that I am OUTRAGED that this group of "Amateur Radio Operators" considers itself PROUD to be in the SAME company with such clubs like the DRC (Denver Radio Club), which has been around since World War II, and is *one* of the oldest (if not *the* oldest) clubs in the nation, and is the first club I ever joined.

This, to me, is an utter and complete SHAM, and the ARRL should be ASHAMED of itself for even CONSIDERING the FRIGHTENING idea!!! :(

I renewed my dues with ARRL because I *thought* it provided me with services that I felt would be useful to me. It is through the ARRL that I found the world-renowned and infamous HandiHams program (of which I later became a member). I saw their ad in QST Magazine.

And that leads me to this.....

HOW (on earth) does LAMBDA compare to such NEEDED clubs and organizations like HANDI-HAMS?!?!?

The answer: THERE IS NO COMPARISON!!!

At least with HANDI-HAMS, you get kind and caring hams who are MORE than willing to help even the MOST SEVERELY (fill in your own politically correct term here) person obtain a license, REGARDLESS OF THEIR OWN PERSONAL BELIEFS!!!!

What do you get with LAMBDA?? A bunch of dimwitted, care-free, selfish "hams" who care about little else except their own personal beliefs!!!

Some comparison, huh??

When I joined the ARRL (who, BTW *will* receive a copy of this post to put in the "Correspondence" section of QST Magazine), I was under the impression that it was MY organization, and that *I* had some say in league matters.

I guess I don't have that option after all....

I also thought that we E-L-E-C-T-E-D the Section Managers, Division Directors, and other people that make *MY* club work the way *I* want it to.

I guess not.

I also thought the ARRL would rather take organizations like LAMBDA to court (or vice-versa), stand up, and F-I-G-H-T for what we, the M-E-M-B-E-R-S-H-I-P, believe in. In other words, *OUR* R-I-G-H-T-S!!!!

Looks as if all the fighting punch has gone out of the ARRL....

I also thought the ARRL doesn't "cuddle-up" or allow themselves to be BULLIED by organizations such as LAMBDA!!!

I guess I was W-R-O-N-G!!!! :(

Bottom line: It looks as if, UNLESS things change, I'm gonna be $31 richer by year's end. In fact, I'd urge my fellow cyberspace comrades (sp?) to ask yourselves if YOU want to be a part of an organization that COWARDLY caves in to SIG's like LAMBDA, or just remain on the sidelines.

I'd be willing to bet that if enough of us chose not to renew when our dues expire, the ARRL just might re-evaluate the LAMBDA affiliation, and will suddenly wake up and smell the coffee, and tell LAMBDA what it told them back in '93 when they wanted to place an ad in QST.....

GO FLY A KITE!!!! End of affiliation!!!

Any comments???

73's for now, my friends!

DE KB0OXD

>
Mrs. Fisher's little man seem to still be secure in all his
insecurities. Burt hasn't been changing his ways, merely changing his
locations.
It seems the happily married Mr. Fisher has been hanging out for quite
some time in the usenet newsgroup *alt.support.divorce* and as of late
has been making numerous posts to that group. Some of Burt's topics in
a.s.d. have been:
Do ASDers Own A Gun
How to Avoid Divorce By Treating Your Husband Right
CHALLENGE: Compliment Burt, They Sure Do!
You Determine If I am Fat or Ugly
The Attack of the HIPPO
The Unreal of ASDers
Do these threads remind you of what we have seen here in r.r.a.m? The
content of Burt's posts is almost identical, just make a few changes
for the newgroup. ASDers are fat, ugly and boring, and some have
called Burt's wife.
>called called my wife and
>pretended to be nice and the posted an insult about me here
>AFTER the call. I relayed that to my wife (the exact insult)
>and my wife wonders why I bother with you people of zero
>class and credibility.
There are people who value Burt's thoughts but just like in the
rec.radio group they only E-mail Burt and never publicly make those
posts. Not only that letters of support are amazingly similar!

Besides being a teacher and net loon Burt has other interests. Here is
a post found on usenet from Burt.
>content-type: text/plain; charset=us-ascii
>mime-version: 1.0
>newsgroups: alt.disasters.aviation
>x-mailer: Mozilla 2.0 (Win95; I)

>There was a guy on here offering to make you all tape of air disaters
>for slightly above his costs. But his costs turned out to be $18 PLUS.
>He told me he buys video tape for $5 and rents VCRs.

>Then he told me he was going to contact my employer because I complained.

-cut-
>/--Burt Fisher K1OIK--------/---\---/-\---/---\-----/-----\k1oik@ccsnet.com\
-cut-

Wow such a well rounded (not FAT as we all know) individual is this
man, the myth, the legend of usenet! And what are we doing to preserve
Burt Fisher? We are in dire peril of losing Burt to a.s.d.!
I ran a Burt-bot through usenet and found that since the first of this
year Burt has made 360 posts and 183 of them were to a.s.d.
Come on guys, we have to do something and do it quickly or else we are
going to lose Burt Fisher permanently! Burt is selling his gear and
has lost interest in ham radio and may never post in this newsgroup
again!
How boring will that make this already boring newsgroup? How long
before we forget that all hams are old, lazy, stupid...? Without Burt
the only exciting personal vendettas will be in the Code/NoCode
threads and to read those we will have to weed through all the posts
that contain rational thoughts and ideas.

We must act now to save this valuable resource, make a commitment to
preserve Burt Fisher.

Message-ID: <317B5C67.45BC@ccsnet.com>
Source record: 227149

I started the selling out thread but you hams can really beat a dead horse.

Try this test to see if you are man or ham:

This test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting topics on ham radio?_____

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take test.
1O or more. Call the funeral home, send your name into QST as a Silent Key.

Most professional electronics engineers with a degree in electronics would have no problem answering most of the technical questions. Does this demonstrate and "dedication to hard work" in respect of the amateur radio license?

That's like telling everyone the reason you don't eat at McDonald's is because they sell the same things day in and day out. What about Burger King and Wendy's...and whatever other burger joints there may be?

Ham radio isn't located on just one repeater where folks "hog" the machine. There are many other facets to amateur radio.

No offense intended but you must live in an awfully small world if all of your amateur radio experience is on a single repeater. That would also be the same if someone on HF were rockbound with an older radio and didn't like amateur radio because the one frequency he did have was 14.313.

Try some other facets. Satellite, ATV, SSTV, and yes CW just to name a few. Otherwise it's time to find a new hobby.

I see your 2 cents and raise you another 2.

cheers! jim, wk1v

I guess we are to infer that you only missed one question and that is the reason you failed the exam.... Sorry, but that just ain't so. You missed more than one question and every one of them was not about the US gov't agency you couldn't name.

There is a lot more to amateur radio exams than just bandwidth allocations and electronic theory.

Some of us knew what you actually meant...it's just the way you said it..

cheers! jim, wk1v

P.S. Before the VE program came into being I had to take my Advanced exam at the FCC Field Office in New Orleans. I failed it on the first try. That meant I had to drive 75 miles to get home and had to wait 30 days and drive another 150 miles (round trip) [barefooted and in a blinding snowstorm....just kidding] to take another exam. I wasn't the least bit bitter about it. It just meant I had to study a little harder and bone up on my math to be ready for the next time--which I aced by the way. Point... is the extra study helped.

>standards" were all along.

Don't think so. Generals and Technicians had the SAME written exam
until the VE program was implemented. Then a new element was born and
Techs take exam elements 2 and 3A whilst the General takes element 3B.
That is why older BVE (Before VE) Technicians only have to take code
element 1B to upgrade to General. They already have the General
Theory.

One man's meat is another man's poison. Although I also find the digital modes much more satisfying, that is a personal choice. In the same manner, there are those who detest digital communications, and prefer Morse code. The same case may be made for all the other modes that we can enjoy. The bottom line is the amateur radio is so varied, that everyone can find their own interest.

>Digital is the wave of the future. That's where all the growth is now. Just

I think that you are raising a number of issues that have been discussed previously.

I think that replacing Morse code testing with testing of another mode, or augmenting the technical requirements is inappropriate. Premised on the irrelevancy of Morse code testing, then for a number of years, we have been depending on the written examinations as the only means of determining the individual capabilities to operate an amateur station.

Therefore, replacing an irrelevant test with another may seem to be in order, but I take a contrary view. Replacing the irrelevant test, such as Morse code, with another, augmented technical or operational subjects, is unjustifiably burdensome. It is unjustifiable because if the current written tests are sufficient, then knee-jerk replacement of the Morse code exams is spiteful.

If more digital content is required, I believe that the subject matter for the should be justifiable with respect to the government's legitimate interest that we amateurs are not sources of harmful interference to other users of the radio frequency spectrum. Granted, considering my prediliction of digital communications, I would indeed like to see a greater emphasis on digital communications. Yet, my views will have to tempered by the previously mentioned precept of the government's legitimate role in amateur certification. In other words, I doubt that anything more than a cursory knowledge of the various modes would be justifiable. Furthermore, I do not agree with a one-for-one swap of Morse code for digital communications. First, if digital communications and techniques are tested, its knowledge should not be a sole determinant as is currently with Morse code. In addition, if digital techniques, or any other matter, is to be tested, the merits of such testing is mutually exclusive from Morse code testing.

Slide off the bottom cover of the radio. Dress the wiring
harness, especially the heavy guage red power wiring, as near
as you can to the outside edge of the chassis.

Make sure that all the hardware which mounts the circuit boards
is getting a nice shiny ground connection and that ALL of the
screws are there and have toothed washers installed.

Make sure the covers have good shiny "grounding area" to the
chassis and to each other.

There are some extreemly insane HAM radio people here in the
U.S.A. They keep following other people (due to drug use) and
broadcast voices. Voices that pop out of no where.

In Bridgeport, CT. someone took some crack cocaine and then was
followed by some crazy people who started broadcasting voices and told
him to kill someone. HE DID!

Since we could not stop these crazy people with HAM radio
following victoms, politics went up on the penalty for selling cocaine
(used to be the ingredient in Coke-a-cola)

Even the police seem to broadcast voices! Daytona Beach, FL.
and here in Brevard County. When I call the police I can see how
absolutly insane they are!

Please bring up this problem in your conference.

5827. intermod vs overload

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-22 00:00:00 UTC
From: Gary Ross Hoffman <gary@carcs3>
Message-ID: <4lg5h8$sm7@newsreader.wustl.edu>
Source record: 227165

Can someone explain the difference between "intermod" and
"front end overload"?
Thanks

I've just subscribed to the list, so forgive me if this ground has been gone over before

>>> Not ALL of us OLDER hams are opposed to deleting the CW requirement. I

Maybe not, but some of us younger hams are!
>>> feel that International law allowing, that perhaps there should be a
>>> codeless variety of the general license, but would oppose deleting
>>> morse from the advanced or Extra class.

We only have 2 classes of licence here Novice and Full, with both available in Codeless or code-fee variety - you pay your money and take your choice!

>>Now you're on the right track. The issue is not the CW but is really an argument about the
>>entitlement of anyone to use the amateur radio frequencies without any accounting for
>>expertise or dedication to hard work for the privilege of obtaining a license. If there were
>>no CW then the argument would switch to a bunch of people who think they shouldn't have to
>>learn the math to do simple circuit analysis or some other hated thing. We need to decide what
>>level of expertise or ability should be required to obtain the privilege of an amateur radio
>>license and stick to the subject.
>>That's my 2 watts.
>>
>>Chuck, KE9UW
>>
>
Exactly! A lot of what is on the exams in most countries is irrelevant to reality on the air - but that's not the point as we all know!
>Most professional electronics engineers with a degree in electronics would have
>no problem answering most of the technical questions. Does this demonstrate
>and "dedication to hard work" in respect of the amateur radio license?
>
>Cheers

|
> |
>
Indeed - as a first year electronic engineering student the exam seems hopelessly easy to now - though it didn't when I got my call at 14.

Morse may not be relevant to some operators on HF and that's fine. But I had to answer questions on PACKET during my exam - something I have never used and have had enough experience of to know that I will never use!

BTW I'm 18 years old and I operate CW:SSB in a 4:1 ratio so I don't agree with it being an old man's game either.

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html. This new classified section will include Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

Hey, I'm in a smallish city in Massachusetts (second fiddle to Boston as far as size), and we have our share of losers on 2m. After putting up with increasing levels of crapola for a couple of years (including interference with public service nets), a few of us just spontaneously built some DF gear and started to work, making no secret of what we were up to. All the idiots disappeared just like *that*... Probably some more wiseguy Extra class operators such as are always getting bagged by the FCC and featured in QST.

The DF gear I'm talking about here is pathetically simple stuff - mine is a 555 timer chip, a transistor, some resistors and diodes, some coax, and two dipole antennas on a stick. Total price is maybe $15 if you bought it all new, mine was free cuz I had all the stuff in my junque box. It works amazingly well!

Check around - many ham clubs are into foxhunting and will gladly come and help you out. I've been offered the services of a nearby club that's heavily into this stuff, multiple Doppler DF boxes and the whole bit, just for the thrill of a real live "fox". We ended up not needing the assist.

>amplify the amplitude-modulated signal.

how much power are you looking for? you probably can use any of the garden variety small signal transistors such as the 2n2222 in a simple class A amp. for a little more punch, even the Rat Shack 2n3053 will work well at this low a frequency.

>One other question deals with the filter. I am going to use a bandpass
>filter to remove noise and have the bandpass center around 277 kHz.

well, if you assume a bandwidth of 6 khz for double sideband AM, and design the filter Q accordingly, it should be no prob.

Can't say that I agree with you regarding CW is a dying mode, but you raise a valid point that perhaps we should test on one of the new digital modes vs. CW. Lets see, how bout you sit down with a piece of paper and pencil and I'll send you five minutes of RTTY, or one of the "TOR" modes of your choice. Should the Pass/Fail criteria be one minute of solid copy or the present "mutliple guess" method?

Opinions expressed herein are my own and may not represent those of my employer.

Tom,

You may want to check out DX4WIN from Rapidan Data Systems (in Virginia). They have a web site at "www.erols.com/pvander" (I think that's the correct URL, if not let me know and I'll get it to you.) From the web page, you can download the demo version. The demo version has the same functionality as the "live" version, only it won't let you save the data to disk.

The product is supported under Windows 3.1 and Windows 95. (I also have a copy running on my Windows NT workstation, which seems to work okay.) It is an extremely efficient and powerful logging program. It handles all the usual Award tracking, Packet interfaces, Radio interfaces, reports, QSL label printing, CDROM lookup, GOLIST, etc. Being Windows-based, it has full GUI facilities (cut/paste), window re-sizing, etc.

Some of the features that I feel make it unique (and that I like) are:

o intelligent packet operation - it will monitor the packet frequency and display spots as they're transmitted - ether from the cluster, or the reporting station. This gives you a slight time advantage in receiving the spots (and you don't have to be connected to the cluster). The spots can be displayed in a window, and can be color-coded depending upon whether the band/mode/etc are important to you - you configure it. It will also "talk" the spots if you have multimedia on your computer. You can also give it a callsign to watch for - good for monitoring for DXpedition activity.

o Off-line/on-line data entry; can either take the time from your system clock (for on-line additing of QSOs), or allows you to add historical QSO entries.

o Fully customizable, with set-up and preferences screens for awards, packet recognition, radio protocols, station parameters. Contains editing tools for maintaining the Country/Prefix mapping database and QSL label formats.

o can handle multiple "log" files - which are separate physical files, so you can segregate different operations (Dxpeditions, old calls, portable operations, etc). Also, blocks of QSOs can be logically divided within a given log file - for example, I maintain two logical groups within one "logbook"; one for my G4MZF/W4 operation, and one for my NR3Y operation - I can view them individually for QSL label printing, but view them as a whole for DXCC submissions.

o Through different windows (which can be displayed at the same time and/or re-sized to fit on one screen), it can display QSO information, a general "logbook" view of the QSO database, a window displaying all previous QSOs with the same station, etc - all updated automatically.

I could go on... but it's probably best if you download a copy and try it for yourself. I probably sound a bit like a salesman - I'm not; I don't have any commercial interest in Rapidan Systems at all - I just think it's a neat product! Try and see.

73, Darrell.

Just to follow up on Dick's excellent response, does Mr. Ring know
why the 10- prefix is even there?

One of the first 2-way systems that was put in was in Chicago in the
30s, and used 1630 (I think) AM for dispatching (just above the
AM broadcast band), and a 30-35mhz for the mobile's response.
I have an original manual for one of the first Motorola mobiles - made
by Galvin Manufacturing Company, Chicago, IL... The transmitter used
a motor-generator (called a Dynamotor), keyed by the push-to-talk
button, and it took 1/2 to 3/4 of a second to reach full speed,
and therefore full voltage. The reciever used a vibrator based power
pack, similar in design to the car radios of the era. It also had
a steering-column mounted control box, with a flexible cable that
ran back to the trunk-mounted equipment. This cable fine-tuned
the AM receiver, and the knob was labeled "Clarifier".

Since the equipment was such a power hog on the 6 volt automobile
systems of the day, the users were instructed to minimize the
transmit time. Therefore the most used responses were abbreviated
to Message #1: your signal is too weak, Message #2: I hear you
OK, etc. There were ten of these message codes, and the list was
eventually shortened to the "Ten-Code". And the word "ten" was used
to force the active part of the message to the end of the
transmission so the dispatcher had a chance to hear it - many times
the officers would be quick on the PTT button, and all the dispatcher

would hear is "<noise burst>four". Guess why there is a 10-7, a 10-8,
and a 10-10 code? The transmitter filaments were off in monitoring mode.

Many of the departments have their own variation on the various codes.
This is most visible in the range of 10-30 and up.

I've chatted with an old time LAPD communications tech who is in his
80s, and was involved in installation of the first radio system
the LAPD used - and they used their AM frequency up to the mid-60s.

So the 10-code has been around since the 30s. CBers, with their
"professional radio wanna-be" attitude that was so visible in the
60s just made it more visible to the public (along with Broderick
Crawford...). 2150?

:
: Tornadoes are "very rare beasts" here? Since when?

Relatively speaking, yes. One bit of supporting evidence is how y'all
respond to them. It also snows here, too, but the public still doesn't know
how to deal with snow, either.

I agree -- Skywarn hams need to learn to respect tornados a little more and
know when it's prudent to take cover.

: Are the telephone DTMF codes the same as the ones we use for hamming?
: I thought maybe an easy way to add DTMF to a radio would be one of those
: portable tone dialers.

Yes. I added DTMF capability to my base rig by using an old touch-tone phone and a simple interface (+12v from rig to phone through a resistor, then a capacitor to the rig). As Gary points out you don't have the A-D keys, but they don't get used much. Have someone with a spectrum analyzer look at your signal to set the deviation and frequency compensation so that all the keys are decodable. This can be done by trial and error, but you're likely to annoy a sizable number of people without some sort of instrumentation.

Good luck,

Greg KO6TH

5851. 144 Mhz EME-sceds wanted for clubstation SK7AX in JO77DS !!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-22 00:00:00 UTC
From: fredrik.elversson@mailbox.swipnet.se
Message-ID: <4lgl44$f1o@mn5.swip.net>
Source record: 227189

Hi,

This is SM7UGE and SM7FWZ who are looking for 144 Mhz EME-sceds for
our local clubstation with callsign SK7AX (Name: SVARK).

SK7AX are located in HUSKVARNA in SWEDEN in loc. JO77DS, rig is a
FT-736, antenna is 4 x 15el QD, power is 800W, and we recently bought
a DSP-filter. The only thing we dont have is QSO's in our
logbook....hi. (not so many - most of them are by satellite).

There is a clubmeeting every tuesday between 17 and 22 UTC, so sced's
are very welcome in this time, but also saturday and sunday are fine
to us.

Please write a mail to one of the adresses below if you are
interested,

73 de Fred SM7UGE and Ronny SM7FWZ

Packet: SM7UGE @ SM7UGE.F.SWE.EU
E-mail: fredrik.elversson@mailbox.swipnet.se

Packet SM7FWZ @ SM7FEJ.F.SWE.EU
No e-mail.

==========

Tom, I've really enjoyed Logic 4. It has all the features you listed,
plus some. I have tried several programs - mostly shareware like
Hyperlog and a bunch of others whose names escape me right now- and
definitely prefer Logic. If you want, contact Personal Database
Applications (who publishes Logic), 2616 Meadow Ridge Drive, Duluth,
GA 30136-6037; 404-242-0887. Hope this opinion helps, and good luck.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
TNC/PACKET DOOR IS UP & RUNNING !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
5,400 FILES IN 117 FILE AREA'S..so far !
***GOOD NEWS THE LANDLINE TO HAM PACKET DOOR IS UP AND
RUNNING**********
ARE YOU ON THE HAM DOOR USERS LIST ???????

latest list of AMATEUR RADIO WEB SITES & PAGES
now 1,958 sites & pages !!!!!!!!!
and GROWING !

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.

5855. DXCC Country List (04/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-22 00:00:00 UTC
From: wmb@ulysses.att.com
Message-ID: <Dq9MMy.7pK@ulysses.homer.att.com>
Source record: 227193
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

The current ARRL DXCC country list (04/96 version) follows.
Changes include the new countries Scarborough Reef (BS7)
and Pratas Is (BV9).

This list is available via
- occasional Usenet posting to rec.radio.info and
rec.radio.amateur.misc.
- ftp from ftp.cs.buffalo.edu (as pub/ham-radio/dxcc-k2di) and
other Amateur Radio archive sites.
- email from the ARRL Information Service -- send a message
containing the line "send dxcck2di.txt" to info@arrl.org.

Much of the information was provided by Ron McConnell, W2IOL.
His detailed geographical listing is also available via ftp from
ftp.cs.buffalo.edu, and from info@arrl.org.

The colon-separated fields are:
1. primary amateur prefix
- "*" suffix for deleted countries
- "@" suffix for likely new countries
2. country name
3. continent(s)
4. ITU zone(s)
5. CQ zone(s)
6. time zone (hours from UTC)
7. latitude
8. longitude
9. ITU prefix allocation(s) ("~" suffix for unofficial)
10. other amateur prefixes

Please mail corrections and suggestions to me.

Bill Brelsford, K2DI
AT&T, Basking Ridge NJ, USA
wmb@att.com

>>digital modes much more satisfying.

That's funny. I thought it was actually getting harder to find a clear
frequency for CW on the amateur HF bands compared with, say a few years
ago.

I find the internet much faster and more dependable for digital communication.

>>Things change and we have to keep up with the changes or the hobby
>>will shrivel up and die.

I agree. Why not promote our VHF and microwaves allocations? They're the
ones in danger of being taken from us. That's where the future will
be. There's not much room on HF anymore. .

5857. Amateur Radio? I don't know anymore...

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-22 00:00:00 UTC
From: ehoops@cencom.net
Message-ID: <4leqnk$1er@news.cencom.net>
Source record: 227195

I used to have a license back in the early '70s when I was a teenager. I stayed up late banging out ten wpm to anyone who would listen. Back then I was WN2RRM, and I thought it was the neatest thing in the world. What I really wanted from radio was the ability to chat with people from all over the world -- just because. The world was an interesting place then, and it still is.

A few years ago, I got my novice license again. I'm now KB2NWJ, but I've never used my privileges. I still have my Yaesu FT-DX 560, and it still works. I know my code, up to 20 wpm (I still think code is cool.) Trouble is, I've discovered that the equipment is so incredibly expensive now, that I'd have to sell a daughter or two to upgrade. Besides, I have IRC, which is precisely what I wanted from Amateur Radio to begin with.

So tell me, why should I go to all that expense just so I can do in code what I do with a keyboard?

Where's the fun in radio, now that so many people use computers to do the code translation for them?

I long for the days of 15 meter nights and 80 meter days; when a Technician was unusual; when a faint signal might just mean Lithuania -- ahh, yes, but I was talking to someone in Lithuania last night on IRC.

So, fellow amateurs, what's out there that ain't in here? And is it really worth such a big chunk of my income?

-Emmett

5859. Telex Boom Headset ???

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-22 00:00:00 UTC
From: Kevin Elliott <kevinel@primenet.com>
Message-ID: <4lhg3n$3cd@nnrp1.news.primenet.com>
Source record: 227197

Does anyone have any info on the Telex-Hygain CB-100 boom headset? The info I would like to have is: Impedance, pin-out (wire designator), element type. If you have this info and could pass it along I would be forever in your debt.

5860. Interfacing Knwd TV-502 xverter to TS-850?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-22 00:00:00 UTC
From: "Bruce R. Sawtelle" <bruces@isd.tandem.com>
Message-ID: <4lei8u$a1f@news.mpd.tandem.com>
Source record: 227233

I recently purchased a TV-502 transverter and was wondering if anyone has successfully interfaced it to a TS-850 (or similar "new" rig). The TV-502 was made for the 520/820 and has lines for Screen Grid control, etc. From looking at the schematic, it appears the -100V SG source from the '520 needs to be duplicated along with an ALC from the HF rig.

Any inputs would be appreciated!

73 & Thanks

Bruce W3NJ

>HAm radio is DEAD unless something radical happens.

Oh brother! Millions huh? All cuz of the Morse code requirement.

Have you gotten any autographs from the little green men running
around in your back yard yet? Just curious.....

It's people like you that will be the demise of amateur radio. Not
the government, not the Morse code requirement...geeez..

C'mon. If you want to talk around the world get into satellite
communications or something. There are a helluva lot more amateur
frequencies above 30 MHz than there are below.

What happened to all this good stuff that was to come out of the No
Code license? Seems like all we got is a bunch of belly-achers who
would rather concentrate their efforts on obtaining something for
nothing rather than putting their efforts into learning about what
they already have. You're giving a bad name to those who do have a
genuine interest in advancing the art of amateur radio and entered the
hobby via the same class of license you have.

You would rather rant and rave about a tiny piece of spectrum while
much of where you already have privileges for is under the gun. Guard
that my friend. If there IS power in numbers THAT is where your
efforts should be.

As far as what people talk about...conversations are as diverse as are
its participants. If you don't like listening to Harry talk about his

gall bladder attack, change the damn frequency. Better yet, use the ON/OFF filter....or....sell your equipment and find another hobby. As long as there are hams there will always be SOME THING to talk about. You might not like the topic...but someone else might be interested...it was to them the topic was being aimed anyway...if you don't like it...mind your own business then.

RCA WT-100A and/or Hickok 700 tube tester wanted. Seeking unit in good running condition, needing some repairs or for parts (if I later come across a working unit). Willing to swap for something or please state a fair price for the respective unit. I would prefer swapping something as cash is tight, but I would have to find out what you are looking for -- I may have it. Please indicate if you have manuals, schematics, charts and/or plug-in tube sockets for the respective tube tester.

Kindly, email with details.

Thank you.

Ted, I was following you until this one. Can't let it go by. Are you advocating passing out licenses like food stamps so we can have out of band operation, splattering over the whole band, interfering with every radio and television service within 10 miles, etc? I think there are plenty of reasons to exclude people from amateur radio if they don't know the first thing about it. Operating a mutli-function transceiver is a whole different animal than using a Radio Shack HT, especially if a high power linear is involved. And I am NOT talking about CW just in case you are ready to launch into that again.

Speaking of people who don't know what they are doing, have you noticed how many of your posts on this newsgroup are duplicates?

Tornadoes and Truth

I've been following the "SKYWARN" thread with a bit of interest...
you see, I chased tornadoes in Oklahoma for nearly five years as a
professional television photojournalist.

A few points to clear up from the thread:

1) Most tornadoes are captured on tape by amateurs, especially in
this part of the country where they are rare and quick to disappear. It's
important to show that video so local folks can learn to respect such a
destructive force. The National Weather Service is also picking up copies
of the tapes to study. From the tapes I saw, no one shooting any of them
was in any real danger.

2) Gary Pearce pointed out one of the most important facts, that the
local NWS radar was not in service and the NWS was using radar sites in
Morehead City and Wakefeild Va. to monitor these storms. This made
the SKYWARN network VITAL to the NWS's effort.

3) WRAL-TV did not issues "Tornado Warnings", that's the job of the
National Weather Service. WRAL-TV Repeated the NWS warnings when they
were issued, until then WRAL-TV stated tornadoes may have been spotted
and suggest folks may want to take action in those areas.

4) In an Investigative Report, WRAL-TV reported that the NWS radar
was down, and that nearly twenty minutes had passed between the time
SKYWARN reported the funnels and the time the NWS issued "Tornado
Warnings".

Now to join in Victoria's parade.....

I'm a professional television photojournalist. I'm trained in
spotting and chasing tornadoes. Tornadoes scare the hell out of me.
If you choose to get the cam-corder out and put yourself in harms
way, then so be it. But if I'm out there, I ask myself a lot of questions
in a very short time. Is it worth risking my life? What's my out if the
danger gets to close? What's my plan "b"? My experience and training help
me answer those questions, would you be able to?
I've been to chemical spills where a "Joe-home-video" has gotten in
the way of firefighters. I've seen a "newshawk" contaminate evidence at a
crime scene. One of these days, someone is going to take their home
camera where they shouldn't and get killed. It isn't worth it, most news
organizations only pay $25 to $50 bucks for REALLY GOOD home video.

And for the person who claimed we are Blood and Gore hunters driving a dangerous speed to get to the next kill, *HP will get you the Highway Patrol, just check your own speedometer before you call.

>mattro@radware.net

Why can't you just accept the fact that some of us are "code impaired". I have always been involved in electronics, but I limit my involement to shortwave and scanning. Why? Because I get lost in the dots and dashes. Call it a mental block, attention deficit or whatever the PC thing is to do. The fact remains that I am not lazy or stupid. I just have difficulty with this language.

No, I don't want Amateur Radio to become another form of CB, but the hobby shouldn't be restricted by such narrow thinking as expressed in this thread and other postings. There are many of us out here that support the concept of amateur radio, but haven't been able to overcome the code requirements.

The problem of operators with CB mentality is not the result of ones inability to copy code at 5... 15.... 25..... words per minute. These problems are the result of individuals not respecting fellow users.

Did these individuals become more "ham-like" because they needed to know a few details about technical theory? No!

Will these individuals become more civilized through the process of mastering the code. I doubt it!

Maybe the amateur radio training of the future should include interaction skills as well as the technical data.

At this time of possible reallocation of the radio spectrum to the highest bidder the hobby needs to welcome the various user groups and accept the fact that we have differring abilities and intrests. The pressure is on to put the frequencies to the best possible use. Corporation $$$$$$ vs the hobby. Listen and evolve to grow. Put away the "I did it, so you must" mentality.

I wish that I was the one to buy the gear that started this thread, but my receivers will have to suffice........

Looking for a trip down memory lane? Or possibly just looking for the specs on that neat Heathkit rig you bought at the last ham fest? Well here are some extremely interesting Heathkit catalogs from the 1970's.

May 1975
August 1975
Spring 1976
Fall 1976
Spring 1977
Summer 1977
Winter 1977
Christmas Catalog 1977

Price is $10 each including shipping. All are in good shape except for Winter 1977 which has a torn cover, otherwise its ok. Its price is $7. If you buy two or more, I'll throw in a mystery catalog that is missing its outer cover, but seems to be from before 1974.

Yes it might seem strange to some that I'm selling old catalogs, but I have seen these sold right here in these newsgroups in the past.

I've used the Avanti 2m glass mount on a couple of cars in the past and was quite pleased with them.
Truthfully, I didn't notice much difference between that antenna and a 1/4 wave mag mount, but I
never actually compared the two side by side. Theoretically, I don't think the capacitively tuned
glass mount is as efficient. I have a roof mounted 2m antenna (drilled a hole--scary!) on my present
vehicle and am VERY pleased with it. That's the BEST way to go, but not always possible.

Source record: 227003

Anyone interested in satellite tracking might want to take a trip to:
http://www.netwide.net/logsat
It's the home page of LogSat Professional, a satellite tracking
program under Windows. The commercial version of the software is
advertised there, but you may download the demo version as well. The
site also carries fresh keps (updated daily) for about 700-900
satellites, available both as a zip file or in uncompressed format,
ready to be read by tracking programs. Also available are pseudo
Keplerian elements for the Moon, which will allow you to track it just
as if it was a normal artificial satellite. Of course there will also
be a few links to other interesting pages related to ham radio.

A friend of mine will be getting some tv coverage for Field Day for
the ham club she belongs to. For the coverage she has been asked to
provide some backgound information about Field Day, such as when did it
start, who started it and why, etc. I know why we have it but I have no
idea as to who started Field Day or when the first Field Day occurred.
If anyone has any info on this, I would be happy to hear it. My friend does
not have email access so email me or post to the group and I'll make sure
she gets the info.

re: intermod versus overload

One (intermod) is caused by the other (overload), in the sense that overload (exceeding the third order intercept point) creates "intermod products" that appear within the passband. Once the 3rd order point is exceeded, the products increase in amplitude logrithmically. This point (the 3rd order intercept) is one of the most important measurements of the quality of a receiver since it will be affected by the quality of the internal oscillators used in the conversions, etc. Poor performance in this regard will also render otherwise high quality filters ineffective, since the products that are generated can result in an apparent degradation of the filters performance. If you have a receiver that is poor in this regard, you can easily improve the intercept point by use of the attenuator. Using 10db of attenuation will improve the receiver's intercept point by the same amount. Simple way of determining whether what you are hearing is the result of this problem or not. Since most of our equipment these days has a good deal of excess sensitivity (especially below 10Mhz) you can use the attenuator if the radio has one to effectively combat this problem.

Patrick Cook,
What is the problem that you have against LAMBDA joining the ARRL ???
Reading your post it does not come out! Do you not like the people that are affiliated what LAMBDA ??? Are you concerned about their personal habits, rather than that they are people who enjoy HAM radio as much as you do, and they want to join a supportive group who's interest is HAM radio ???
I may appear that you may actually be scared of them, for what reasons I don't know, and that you might be labeled with them if you talk to them or share the same interest, well the only label you deserve is selfish. The ARRL is also my club, along with many others, I for one do not share your views and believe whole heartedly that they should be welcomed.
Of course the post was your opinion and this is mine.

BTW I hope you are $31.00 richer, it's a small price to pay to be rid of hatred.

Hi.. I am wondering if anyone out there who has an Icom IC-2000H
could help me out. I am wondering how you like it?? How does it preform on voice??
Is it ok on Packet?? Is it a reliable rig all around?? Please give me your opinion.
I have the need for a radio with high power to hit distant repeaters (70 Miles)
and I need a radio that I can hook up and un-hook up for packet easily. Later I would
like to go mobile with it (When I get a Drivers License). I think the IC-2000H
would fit my needs. Please give me your opinion. TNX Mike

Just keep in mind that there is much more to Ham Radio than 2m repeater
operation, even if you don't care to learn to "di-dah" and get on HF.

Technician licensees can enjoy DX via Satellite and EME. They can
also hook up a camera and operate ATV. Transmitter hunting,
microwave operation, antenna-building, and lots more also come to mind.

And probably the best bang for the buck is 6 meter operation
- get a modest SSB rig (an old Heathkit SB-110A for example),
and a modest antenna (even a dipole) and you can have a ball during
band openings (and maybe work Europe and the Caribbean!).
When 6 isn't open, you'll often find a really nice bunch
of locals there.

Ham Radio is a BIG hobby with lots of interesting corners to explore.
Have fun & 73,
Nick KD4CPL

>Give me a break!!!

One break, coming up!

Are the Lambda ARC folks forcing their beliefs on anyone? I, for one, have received no literature, telephone calls, email, or other contacts by anyone in the Lambda ARC trying to convince me to change my sexual orientation. The only beliefs I see people trying to force on others is that homosexuality is wrong, and should be swept back into the closet and off the air.

There's nothing anyone could say to me or send to me that would make me become homosexual any more than any information pressed upon me could change the color of my skin.

Live and let live, welcome the Lambda folks to the airwaves (they've been there all along) and to the ARRL. Equating Lambda with murders or militia members is silly at best.

>>> >It's time we stop living in the 50's and move up to the 90's.
>>> >Ted F.
>>> >N3SQY

I was always one who thought I was code impared, but a naval radioman set me straight, I learned code different than most, 6 hours a day with 4 - 15 minute breaks, using computer, radio and tapes, yes I thought I was going crazy, yes it worked.

I don't really have an opinion about the code requirement it was a requirement, I wanted the license, I passed test, got license, end of story. I am beginning to question what the no code test has done for Ham radio. We were promised all the technical advances in VHF/UHF modes from all these highly trained electrical engineers who dearly wanted to get into Ham radio but just couldn't handle the Morse requirement.

What we seem to have gotten is a bunch of whiners who aren't satisfied with the spectrum they have, don't do anything but buy radio's they want to modify, .ie posts: Is there any modifications for, not how do I make this radio do .... Then they complain about how they don't have HF privileges, but don't want to take the effort to learn Morse code.

I witnessed a guy pass the Morse test by drawing squiggle lines representing the dots and dashes as he heard them then transposing that to the letters, I couldn't believe it. Does he use Morse code now, believe it or not he does, he is now an extra, but he devised that method just to pass the test because he wanted the license. He felt it was a requirement, he couldn't learn the code, so he devised a method to pass the test. Finding out he could learn the code was a pleasant surprise to come later after he was on the air.

I talked to another guy who was taking the test for the 13th time for 13 wpm, he said he really should practice other than taking the exam, he did eventually pass also.

Maybe it shouldn't be a requirement, but whining and complaining here doesn't make a bit of difference, except maybe convince people like me we really don't need these guys on HF, with this attitude.

I know there are some really great no-code techs out there, but I am still waiting to see what great technical advances are being made by this influx of new blood.

BTW some of the most interesting conversations you will have will often be with one of these guys who complain about their gall bladder if you will just visit with them, not the usual contest type chatter, but really talk to them. I find their experiences often to be delightful, much more interesting then how do you format a 20 meg hard disk that I hear from most of the 2 meter repeaters.

I had really hoped that maybe one of the things to come out of the no code tech was a Microwave spread spectrum based packet backbone to shore up the shortcomings of packet, maybe I was a bit optimistic, and will have to wait for some CW hack to figure it out.

Did they suddenly stop?

>world-renowned and infamous HandiHams program (of which I later became a
>member). I saw their ad in QST Magazine.

Did Handi-Hams suddenly stop being a good program? Did I miss something?

>And that leads me to this.....
>HOW (on earth) does LAMBDA compare to such NEEDED clubs and organizations
>like HANDI-HAMS?!?!?

Just like any other club. Would you complain as loudly about my Ocean
Parkway RC?

>The answer: THERE IS NO COMPARISON!!!

Right. One is a Radio Club, the other is an organization to help
handicapped folks.

>At least with HANDI-HAMS, you get kind and caring hams who are MORE than
>willing to help even the MOST SEVERELY (fill in your own politically
>correct term here) person obtain a license, REGARDLESS OF THEIR OWN
>PERSONAL BELIEFS!!!!

Do you have proof that Lambda ARC discrimiates against others?

>What do you get with LAMBDA?? A bunch of dimwitted, care-free, selfish
>"hams" who care about little else except their own personal beliefs!!!

What proof of this can you offer?

>Some comparison, huh??

Yeah. What are you gibbering about?

>When I joined the ARRL (who, BTW *will* receive a copy of this post to
>put in the "Correspondence" section of QST Magazine), I was under the
>impression that it was MY organization, and that *I* had some say in
>league matters.

You do. Contact your SM (that's Section Manager) if you have complaints.

>I guess I don't have that option after all....

Sure you do. You could always vote with your feet.

>I also thought that we E-L-E-C-T-E-D the Section Managers, Division
>Directors, and other people that make *MY* club work the way *I* want it
>to.

Yeah, but we don't have a tyranny of you running the show. If my opinion
differs from yours, what of it?

>I guess not.

Indeed. The ARRL doesn't answer to one lone crazy voice crying out in the
wilderness.

>I also thought the ARRL would rather take organizations like LAMBDA to
>court (or vice-versa), stand up, and F-I-G-H-T for what we, the
>M-E-M-B-E-R-S-H-I-P, believe in. In other words, *OUR* R-I-G-H-T-S!!!!

Why should they? Lambda ARC is a radio club, why shouldn't they get
ARRL-affiliated status? Why should ARRL pick on Lambda and not on the Ocean
Parkway RC?

>Looks as if all the fighting punch has gone out of the ARRL....

Naah. They see no need to fight a non-battle.

>I also thought the ARRL doesn't "cuddle-up" or allow themselves to be
>BULLIED by organizations such as LAMBDA!!!

??? Can you justify why ARRL *shouldn't* recognize a legit RC?

>I guess I was W-R-O-N-G!!!! :(

You are indeed.

>Bottom line: It looks as if, UNLESS things change, I'm gonna be $31

Well I guess that all the Ham people that use digital should have to test on using the "C" language or Assembly. If you cannot program in one of those then you shouldn't be able to connect your computer to a radio. So much for CODE. "Just let me hook this cable to that thing and start typing.....", "When is the next pass of RS-232 ?...." "I don't want to KISS it I just want to connect...." Yea we all know you understand CODE.....

>Gee. That sure is funny. If this is the case, then why are there groups
>of hams who are devoting - in some cases - ENTIRE STATIONS to the world of
>TCP/IP?!?!?

Probably because TCP/IP is a useful protocol for packet radio. Its use
does not require a connection to the public wired networks. We make
extensive use of it in GRAPES as a purely amateur radio protocol, with
each of our switches running TCP/IP and doing TCP/IP routing. Our user
stations often use TCP/IP as a transport protocol for amateur radio Email
and file transfers. No connection to the public wired network is implied.

>If this is the case, then we *really* don't need the AMPRnet then. Now
>do we?!?!?

Do you know what the acronym AMPRNET stands for? It stands for
AMateur Packet Radio NETwork. Imagine that, no mention of the
public wired network at all, it's an *amateur radio* network.

>Somebody feel free to correct me if I'm mis-reading the above quoted message.

Consider it done. Note that interconnecting an amateur radio packet
network with the public wired networks can and is being done by some
amateurs. Like a phone patch connection, however, it is a specialized
third party interconnect that must be done sparingly and with extreme
care because of the different rules which apply to amateur radio compared
to the rules (or lack of rules) which apply to the public switched networks.
De minimus, a firewall must be erected at the interface of the two networks.

Wanted: Alpha 77 Schematic... I am rebuilding an old Alpha 77 linear amplifier, SN 2006. I need the correct schematic drawing for this unit.

It was built around 1972 in Florida.... Key production points are point to point wiring of the grid over current and antenna input relays in the bottom of the PA compartment. Later version had a circuit board in the bottom of the PA compartment with the relays as described above along with the cathode circuit zener diode.

Please call collect at 906-484-2088 evenings, or e-mail to me at the following address: wbecks@sun.lssu.edu

I will pay for reproduction costs and mailing plus you time!

Tnx,

William G. Becks, KE8KB

>ICOM equipment directly from a serial port on my PC. I
>really don't see the attraction.

I suppose it is like the argument between internal and external
modems, Cecil. There are advantages and disadvantages to both
approaches. An internal system allows much more intimate control
by the computer's software since it is directly on the buss. An
external system provides more isolation between the systems for
such things as lightning surges and noise.

The Comer unit appears well shielded internally, and doesn't seem
to suffer more from computer noise than an external radio set up
next to a computer, perhaps even less because the environment is
more controlled by the designers.

The major attractions seem to be a more intimate connection with
the host computer, allowing you to interact on many levels directly
with the radio circuitry, and a savings in cost by eliminating the
separate cabinets and power supplies for radio and computer, and
by eliminating the redundant radio control panel and its internal
control computer.

I suppose the big difference is in whether you look at a radio as
a computer perpherial or whether you look at a computer as an
accessory for your radio. The latter is more traditional, but it
does limit some of the things you can do with computer control
due to the restrictions of RS-232 bandwidth and due to the limitations
imposed by the radio designer on the commands allowed.

As to the radio performance of the DSP-100, it has a direct conversion
receiver. I don't know for sure if it uses the phasing method for single
signal reception or not. It certainly could given the presence of DSP.
It could be using a system such as I recently suggested in the homebrew
group. In that case, performance could be quite good.

I don't know that's the case, however, since I haven't had the
opportunity to study the circuitry of the unit. (I suspect it

does not, however, and that may mean that it isn't a high performance unit.) I only saw one for a few minutes at a show and didn't get a chance to examine it closely or pester the designers with detailed technical questions.

5920. Re: intermod vs overload

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-23 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Apr23.013416.7054@ke4zv.atl.ga.us>
Source record: 227113

In article <4lg5h8$sm7@newsreader.wustl.edu> Gary Ross Hoffman <gary@carcs3> writes:
>Can someone explain the difference between "intermod" and
>"front end overload"?
>Thanks

Good question. Hams tend to use the term "intermod" rather loosely
to mean any mixing or modulation process in the receiver front end
that generates an unwanted product in the receiver passband. While
that encompasses a wider array of conditions than can strictly be
called intermodulation, it will suffice as a working definition for
our purposes.

Overload, OTOH, may not directly involve any mixing products in the
receiver passband (though in a strict sense it usually does). Overload
occurs when a strong (on or off) channel station's signals drive the RF
front end off of its nominal operating point. This can cause blocking or
other distortions of the desired signal.

Since a receiver must have non-linear elements to mix the desired
signal to an IF (or to baseband for a direct conversion receiver),
intermod can occur without overload. Intermod requires at least two
signals to mix while overload can occur with just the desired signal,
but overload can also occur with more than one signal in the passband.
In this latter case, overload is usually accompanied with intermod.

Do they have to be slug-tuned or merely fixed diameter?
The latter is easily done with plastic rod, or if the wire
is thick and only a few turns (as in vhf tuners, etc)
just wind it around a drill bit.

Slug tuned? Become a better scrounge.

Like I said before in a private post, I'm a computer Tech w/electronics background. Two of my friends currently learning(mostly band plan stuff) for the tech light are also in computers. Seems like we are tech. inclined! Of course, we don't know code so I guess we are useless to the FUTURE of ham radio!

Actually, that is EXACTLY what I'm suggesting. You want to keep out riff raff, make the tests FILL IN THE BLANK! Thats right, make people REALLY learn some tech stuff. Make the tests show a real understanding of how radio works. Any parrot can repeat what it hears. Likewise, anyone with a brain can memorize a few questions and answers. Problem is, as soon as the test is done, guess what they all forget!

To be usable, digital modes require more bandwidth for higher transfer
speeds.

How much high-speed digital traffic can HF support?

VHF and above is better suited for digital-oriented traffic.

We already have a license class that allows anyone to obtain access to
the vast majority of amateur bandiwidth simply by answering a few
questions on a multiple-choice examination that you can get the answers
to, in advance, by walking into Radio Shack.

Hi,
Just purchased a copy of Vocaltec's IPHONE, version 3.2
It works great, even at 14.4 baud. Now, I am searching
for the RPTRLNK3 software to help me tie into the USA/EURO
VHF and UHF from here in Taiwan. Anyone need BV on 144 MHz
or 430? Ha.

Could someone please post the URL for the RPTRLNK3 software?
I tried a bunch of web searches and came up with zero info.
I actually had previously downloaded version 3.66, but the
floppy to which I downloaded was bad so I lost the entire
700K file.

Thanks in advance, Joe

There is a lot of emotional feelings on both sides of the argument concerning CW requirements for Ham radio operators wishing to use HF. As of now, International Treaties require that some proficiency in CW be demonstrated. The treaties leave that demonstration up to the individual countries to determine.

It would not be unreasonable to assume that when the international communication treaties are revisited, that the CW requirements may well be dropped. That would allow the signatories to do as they please with CW requirements.

If the entire conversation consists of an antenna discussion, then you can bet those guys built the antennas themselves - maybe even designed them. You could fill a library with books whose sole topic is antenna theory. Heck, we even have an entire newsgroup devoted to antennas (rec.radio.amateur.antenna). Antennas are magic!

>Though, I must say
>that the shorter range VHF bands seemed to be populated more by people

>Surely you only joined Demon *because* the software is KA9Q?
>Now how do I get WNOS to work with Demon .... ;-)

You make it sound like you're joking - I got JNOS to work with Demon, no problem. It would even do the dialup of the PPP line automatically, with a script to do the actual logging on.

I even got SLIP to work with Demon under JNOS (I know, it's a sick idea!).

I'm currently trying to get Linux working with packet radio, so if anyone has any pointers for me I would be very grateful. I know there are lots of Linux types out there, and would be interested to hear from anyone running it with a KISS TNC. I only installed Linux on Saturday, and have only got to the stage of being completely astounded by its features and capabilities! (and as far as downloading and compiling kernel 1.3.93 ...)

TIA,

Scott

Hi All,
I picked up some UHF radios at a hamfest and need some information about them. They have label that says Telemobile, Inc model 51D25U and are full duplex UHF radios with duplexer included and has a RJ-45 jack in the front. Supposedly freq is controlled by processor but guy told me if I could find a book I could figure out freq plan and stick wire jumpers into the prom sockets and set the freqs to the 70cm band.

Any help, information, books, etc will be appreciated. I intend to use them for packet 9600 baud UHF if I can make them work.

>To be usable, digital modes require more bandwidth for higher transfer
>speeds.
>

True, digital communication requires greater bandwidth. But, since the digital communications channel can support greater traffic throughput, the net effect is that is much more efficient than passing that same traffic by hand key. Besides having greater traffic throughput, much of the passing of routine traffic, such as NTS messages and bulletins, can be automated. This means that instead of having to wait for the passage of traffic by means of human intervention during scheduled traffic nets and sessions, the traffic can be passed automatically, thus decreasing the delay between generation of the message/bulletin and its eventual delivery. Mind you, some of the HF networks that have been erected are using modes that are less than desirable, despite the availability of better protocals. But that too is changing.

>How much high-speed digital traffic can HF support?
>

A fesicious response would be "How much low-speed CW traffic can HF support?" Perhaps if we were to observe the trends of just a few years ago culminating in today's activities, perhaps we can reasonably project the future. As little as 15/20 years ago, the only game in town was Baudot (the effects of permitting ASCII on HF were so minimal that one can lump it with Baudot). Not really all that great. Then came along Amtor, then Packet followed by Pactor and now Clover and Pactor II and Lord knows what else is going on these days. Now, amateurs are capable

in sending massive amounts of data, including sending pictures and diagrams (with Clover) in such a small bandwidth, that to send the same amount of data would take kHz of spectrum with a huge number of CW operators over a much longer period of time. Although I am not a comfortable prognosticator, I believe that future advances in digital technologies and protocals will increase the throughput even more, while CW throughputs will not change.

In answer to the question of how much high-speed digital traffic can HF support, a heck of a lot more than CW.

>VHF and above is better suited for digital-oriented traffic.
>

There is no doubt that VHF has characteristics that would tend to encourage digital operations, this would not preclude investigationg and erection of HF digital networks, particularly as as CW operations is so inefficient in comparison.

>We already have a license class that allows anyone to obtain access to
>the vast majority of amateur bandiwidth simply by answering a few
>questions on a multiple-choice examination that you can get the answers
>to, in advance, by walking into Radio Shack.
>
>MD

If one is only interested in VHF, then this would be the case. But the implimentation of those protocals should not be limited to those above 30 MHz. If this were the case over the past few years, then we would not have seen the explosion of such protocals. I believe that such a narrow view contravenes the philosophy of amateurs undertaking technical developments and experimenting with new modes of communications overcoming what was once thought to be insurmountable barriers.

Frankly, I'm glad that this topic comes up from time to time. It lets me exercise my kill file.

I can't believe I live in a country with people so bigoted that they're appalled when a group that believes differently than they do gains some recognition.

Amateur radio is a hobby for everyone. It doesn't matter what your religion is, your ethnicity is, your sexual orientation is, your size, your sex, or ANYTHING. If you can operate a radio and have fun at it, then amateur radio is for you.

No wonder the hobby appears to be dying.

I've seen posts from people involved in LAMBDA. They are apparently involved in ARES/RACES, special event communications, and all the other stuff that makes amateur radio fun for me. Why can't it be fun for them too?

: : Tornadoes are "very rare beasts" here? Since when?
:
: Relatively speaking, yes.

No. She said "very rare", not "rare relative to (say) Kansas".
States where tornadoes can correctly be deemed "very rare" would
probably include Vermont or Hawaii or Washington. But tornadoes
are really not all that uncommon in eastern North Carolina during
the spring and summer.

: One bit of supporting evidence is how y'all respond to them.

I'm not exactly sure what this means. If you mean that we can
only come up with singular examples of tornadoes in NC, you're
wrong. Check out the back issues of local papers like the N&O
to see how often tornadoes strike their readership area.

Of course, tornadoes that result in loss of human life (e.g., the
one in the late 1980s that killed four people and destroyed a
Raleigh Kmart) are far rarer than storms that destroy only
property, but that's true anywhere.

While we're waiting, why not drop the requirement to 5WPM across the board? This would be a good first step, and would not violate the ITU, since no particular code speeds are specified in the International Treaties.

I'm not sure what IRC is, but if you mean decoding and encoding of
CW via a data controller, I have a KAM+, and it's pretty finicky
about the frequency and clarity of an incoming signal.

>Where's the fun in radio, now that so many people use computers to do
>the code translation for them?

Part of the enjoyment of the hobby is learning of new kinds of skills.
I would guess that the novelty of doing keyboard CW QSOs will wear off
for many of them soon, and they'll want to learn something new, like
maybe CW without the keyboard. Or ATV. Or antenna design. Or...

Like most other things in this era, it has degenerated. However, it
depends on what role you want ham radio to play in your life.
As a hobby, it can be very enjoyable. As a purpose in life, it
undoubtedly cannot fill the void. But even so, certain aspects of the
hobby can be very enjoyable to you. And it may be different things
at different times.

Only you can decide whether or not it's worth the expense. Sometimes
I question that myself, especially when we're short of cash at the
end of the month.

In article <4leqnk$1er@news.cencom.net> you write:

---clip---

>So, fellow amateurs, what's out there that ain't in here? And is it
>really worth such a big chunk of my income?
>

1) It is not expensive to talk to folks using Morse. One of it's
more endearing characteristics. Another being that there is
some thrill in talking to a guy camping in the mountains in
ZL on 40m CW with less power than the average flashlight uses.

2) There are a lot of interesting folks out there who do not have
access to the internet and will not for some time to come.

3) There is the initial comraderie that comes from using Morse to
communicate. You find this among sailors (wind powered) too.
I can walk into the radio club in Hong Kong, introduce myself,
and meet some folks. Actually I can do this almost anywhere in
the world and know I'll be welcome. Try walking into a
computer center somewhere and sitting down for a chat.

Now for a pro Morse tirade :-)

It's pretty obvious from reading this group that Morse isn't for
everyone. Just like Soccer, Rugby, Sailing, Flying, etc. It takes
some interest and effort.

However, it is one of the things that makes amateur radio special.

I like to look at it this way. Having no particular interest in
modulation other than Morse, why should someone have to learn about
SSB to obtain an amateur license???

Linda can copy Morse at 20WPM + but has absolutely no aptitude for
math and hence can't get through the written exam. Why not remove the
written requirements for Ham radio. The equipment is virtually fool proof
these days. She has no need to know how to tune a tube type final amp.

So, why not special requirements tailored to each individuals own abilities
and interests?

Now for my opinion.
If amateur radio does not require some extra effort giving rise to
a sense of accomplishment when one has acquired a license, knows Morse,
knows how radio works, understands the various digital modes and
modulation schemes, then it's nothing.

Anyone can buy a plane ticket or drive a motorboat or talk on a cell phone.

Doing away with the Morse requirement (and I agree, it's an archaic mode)
brings ham radio one step closer to being another consumer product.

Like IRC.

Which only shows that the Catholic Church is the last thing we should look to modeling amateur radio after. The first point was well taken however - even an institution which is mired in it's own history, and too stubborn to get out of it's own way, saw the need to modernize. It stopped too far short though. This is what results when an organization is run by a zealot dictator.

I hope and believe that the ARRL will not behave in this way as it guides amateur radio toward the future.

I have a Larsen 2/440 antenna on my 94 Integra. I went with the glass mount because of the hatchback design of the car. It seems to work about as well as the Larsen NMO mount 2/440, and performance on 440 is a lot better than on 2 meters.

It appears that they changed the design somewhere along the line. A friend has the new style on an Acura just like mine, the new antenna is shorter and from what I understand it doesn't have any adjustments that can be made to it on the assembly line. The current version doesn't seem to perform as well on 2 meters.

If the outside coupler gets filled with water, the SWR goes through the roof and it radiates about as well as a Cantenna. Then you'll have to take the coupler apart, dry it out, and put it back together with RTV.

It does ok around town for what it is, but I would only use it as a last resort. The next time I buy a car I'm going to think about antennas before I get off the lot. :-)

>Nope, that's not what they want, they want "something for nothing."
>g0d forbid if they have to do some work to get a license!

I've suggested the following several times and will
note that the pro-code people seem to prefer
to ignor the suggestion entirely as if it was never
even mentioned...

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and
attempt to bring them together. Step one is acknowledging that there
is a middle ground. In the CW debate, the middle ground most
frequently mentioned seems to be that even if CW is less relevant
today, there should not be any elimination of CW testing, unless there
is an increase in difficulty for the theory elements. What I propose
here may not be a perfect answer, but it does seem to address both
concerns.

Current test requirements for General and Extra require the passage of
a CW test at 13 wpm and 20 wpm respectfully along with a separate
theory test. In both cases the CW test is a stand alone, pass (70%
correct) fail requirement. But what if we offered test takers the
opportunity to take the test elements as they do today OR, as an
option, we let them take the 13 wpm or 20 wpm CW test as an integral
part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a
passing score of 70%, they would be granted an CSCE and then take the
theory test as before. However, if they failed the CW test, they

would be permitted to merge the CW test results from that day's test with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I haven't shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn't issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn't attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

G'day,

Does anyone know where I can get a copy of the FCC document which
relates to the Amateur service, Part 97.

If you can either direct me to an Internet location or can E-mail me
the document I would be grateful.

Best Regards

Kevin Mitchell

> they want to join a supportive group who's interest is HAM radio ???

My concern is their political motives, and just exactly how ham radio
fits in.

> I may appear that you may actually be scared of them, for what reasons

I'm not any more (or less) afraid of them than you probably are of me.
What's your point here??

> well the only label you deserve is selfish.

I think this is open for debate.....

> The ARRL is also my club, along with many others, I for one do not share
> your views and believe whole heartedly that they should be welcomed.
> Of course the post was your opinion and this is mine.

That is why we live in a society where DEMOCRACY rules. You have the
right to express your opinions just as I do.

> BTW I hope you are $31.00 richer, it's a small price to pay to be rid of
> hatred.

Don't get me wrong. I'm NOT a bigoted or prejudiced person. I just
wonder what LAMBDA hopes to accomplish by having it's own ARC become
affiliated with the ARRL as an ARRL-affiliated club.

I'm also afraid of what might be next. The Michigan Militias of this
world??? How about the Branch Davidians of the world?? How about
individual people such as Timothy McVeigh & Terry Sullivan?? Should they
be allowed membership even though they stand accused of the most hideous
crime in U.S. history??

Ohhh, how I *DREAD* the thought of HAM RADIO - our PRECIOUS RF spectrum -
could very well be conceivably used in the next domestic terrorist attack...

That's what *I'm* worried and concerned about!!

73's for now, my friends!

all you gotta do to be an arrl affiliate is meet the requirements (not all that
tough..). dems da rulez. dey sez nuttin about youse preference for plugs or
sockets...

>Let me just say that I am OUTRAGED that this group of "Amateur Radio
>Operators" considers itself PROUD to be in the SAME company with such

ok, take all the outrage. don't leave any for the rest of us....

>This, to me, is an utter and complete SHAM, and the ARRL should be ASHAMED of
>itself for even CONSIDERING the FRIGHTENING idea!!! :(

minor flashback, arrl got their hand slapped for not running the lambda ad a
while back. you sound like you didn't hear about that. there are rules for
organizations to follow (esp. non -profits). believe it was taken before the
appropriate government agencies in Conn. and then settled "out of court".

>I renewed my dues with ARRL because I *thought* it provided me with services
>that I felt would be useful to me. It is through the ARRL that I found the

i doubt sexual orientation enters into the services they provide for the most part.
of course, some probably might think it does if they were in the reduced privileges
groups when things like incentive licensing came around in the 1960's..

>world-renowned and infamous HandiHams program (of which I later became a

INFAMOUS handi hams? time to break out the ol' dictionary..

>HOW (on earth) does LAMBDA compare to such NEEDED clubs and organizations
>like HANDI-HAMS?!?!?
>
>The answer: THERE IS NO COMPARISON!!!

with the "infamous" above and with the above taken out of context, it sounds
like you're dissing the handihams...your emphasis can be read both positively
and negatively...

>When I joined the ARRL (who, BTW *will* receive a copy of this post to
>put in the "Correspondence" section of QST Magazine), I was under the
>impression that it was MY organization, and that *I* had some say in

>league matters.

check out "republic" in the dictionary...your say tends to be only at director elections....(betting he didn't copy his director and vice director with his letter..)

>I also thought the ARRL would rather take organizations like LAMBDA to
>court (or vice-versa), stand up, and F-I-G-H-T for what we, the
>M-E-M-B-E-R-S-H-I-P, believe in. In other words, *OUR* R-I-G-H-T-S!!!!

the lambda guys and gals can have a radio club too. room for everybody.

>I'd be willing to bet that if enough of us chose not to renew when our
>dues expire, the ARRL just might re-evaluate the LAMBDA affiliation, and
>will suddenly wake up and smell the coffee, and tell LAMBDA what it told
>them back in '93 when they wanted to place an ad in QST.....
>GO FLY A KITE!!!! End of affiliation!!!

there's lots of hams to replace you. i believe the arrl is due to start a serious membership drive in the near future...they probably need to pick up about oh, 200K more members. I don't think any of the effort will include detection of sexual preference...

(does this read like burt to anyone else...?)

Then you have quite a bit to learn, I'm afraid. The FCC believes very much that it's a " *real* " license. Ditto for the rather large numbers of individuals who have successfully passed their tests and are now licensed Technicians, the largest class of amateur operators in the US.

{Obviously bigoted tantrum clipped}

Now, let's just review what it takes to be an affiliated club.

As I recall, it takes 51 percent of your regular members being ARRL
members, and the group needs to file an application stating their
desire to be affiliated.

That's about it.

Pretty much open, I'd say.

I view it as Without Regard to Things That Don't Matter.

I like it like that.

Why don't you?

I had a problem with a glass mount antenna once and it took me a while to figure out why. I put a Larsen glass mount on my new (at the time) pickup since I was a little wary of drillin "the hole" and a mag mount on the roof can scratch the paint. Well, you couldn't tell it, but my truck has factory tint glass. It's ever so slight and It never really dawned on me untill someone mentioned it. I couldn't get a swr less than 3.5:1 out of it. Turns out the factory tint is accomplished by putting a metallic fleck in the glass at production.

I ended up going with a mag mount....

Perhaps you are not aware of it Drew, but the CW requirements to get
on HF IS just 5 WPM. This entry level will allow access to most of
the HF bands on CW, and 10 Meter SSB.

Opinions expressed herein are my own and may not represent those of my employer.

> can provide will be greatly appreciated.

There are a number of reasons for a separate ground. Someone will no doubt fill you in with more than this, but here are a couple:

First, you need as low an impedance to earth as possible and as short a path as possible for the antenna. The ground with your mains supply could have quite a highish impedance to earth, and the wire distance between your set and earth could be quite long. So it's worth putting your own good ground in.

Second, using the mains earth as your RF ground means that you risk injecting RF into the mains. This could (will?) cause TVI. You can put a filter in (for example, several turns of the earth wire round a suitable ferrite toroid) between the set and the mains earth, but then you don't have an RF ground any more for the antenna.

It's worth having a look at the section on grounds in a number of books. I like the section in the RSGB's Handbook, but I am sure there are others.

What I have is a separate RF ground of four 1.5 metre copper pipes connected together and to the set by a thick (10 sq millimetres) insulated copper wire. Where the RF ground enters the house, it's connected as well to the mains earth via about 5 turns each on four ferrite toroids. This link prevents RF injection into the mains, but makes sure that my set is grounded to the mains earth. There is no direct connection between the rig and the mains earth apart from this.

>world??? How about the Branch Davidians of the world?? How about
>individual people such as Timothy McVeigh & Terry Sullivan?? Should they
>be allowed membership even though they stand accused of the most hideous
>crime in U.S. history??

Yes, they're dead, and yes. I'd even let Tim'n'Terry in if they're
convicted, as long as they have a ham license (the FCC can deny licenses
based on criminal convictions, but I believe such is generally only done if
the crime had something to do with radio.)

>
>Ohhh, how I *DREAD* the thought of HAM RADIO - our PRECIOUS RF spectrum -
>could very well be conceivably used in the next domestic terrorist
>attack...
>
>That's what *I'm* worried and concerned about!!

You think the Lambda ARC members are likely to carry
out acts of terrorism? Don't you think that's just a tad
bigoted and prejudiced?

By the WAY, capitalizing RANDOM words in your POSTINGS and
O-C-C-A-S-I-O-N-A-L-L-Y spacing them out WITH HYPHENS makes
Y-O-U SOUND like a total LOON. This M-A-Y be ACCURATE, but
I'm not S-U-R-E it's what YOU intended.

Scene: a dark, explosives-filled cabin in a remote area of a thinly
populated western state.

Terrorist A: OK, B, after loading up the van and parking it by
the crippled children's hospital, I'll call you on this here

walkie-talkie so you can pick me up in the getaway car. QSL?

Terrorist B: Negatory, A, that CAN'T work! That's a HAM R-A=D-I-O and our club isn't affiliated with ARRL!

Rich

>Anyone know how (if?) it can be done?

Press <FUNC> then <ABC>

I haven't tried it on either of my TM-621 radios in several years.
<ABC> is the Automatic Band Change feature, which I also never use.

You might check the mod files at:

oak.oakland.edu in the /pub3/hamradio/mods/kenwood directory.

There are several mods there for the TM-721 which is the same radio
except its a 144/440 dual band instead of the 144/220 bands.

There seems to be room inside these radios for a THIRD BAND module.
Does anybody know what the story on this extra space is?

Welfare is, usually, granted to those in need, who for financial, medical
or any other legitimate reason, is supplied by the state the resources
that it feels are sufficient to keep body and soul together (whether it
is sufficient, or is extravagant is another debate.) The funding for
welfare comes from the pockets of each one of us throught our municipal,
provincial (state), and federal taxes. If someone claims that welfare,
it is taking that money, indirectly, from my pocket. If the claim is
illigetimate, then that same pocket has been summarily emptied
illegimately.

But the code/no-code debate is not analaguous to me, the tax payer. In
fact, if Morse code test were abolished, perhaps my tax dollars would
decrease. No doubt, however, it would be incrementally small because it
would be more of an administrative savings, than actual. Surely there is
no doubt that if Morse code testing were abolished, there would be no
measurable increase in interference from amateur stations.

Therefore, the analogy that Morse code is a reflection of our supposedly
give-away times doesn't stand up to scrutiny because the abolition of
Morse code isn't "something for nothing", but the continuance of such
testing is "nothing for something".

>Doesn't really matter though, since all I have to do these
>days is shout 'hearing problem' and I get a code free...what?...Advanced or Extra? Why
>work?
>

As I understand it, in the U.S., a candidate can produce a medical
certificate attesting that the candidate is unable to take a Morse code
test due to a disability. I understand that this was undertaken in
accordance with equal access provisions of U.S. laws because it was felt

that the incapacity to write a Morse code test should not be a barrier to one being able up-grade to the highest level of amateur certification.

Regardless of the merits of such a provision, where it is viewed as amateur radio's contribution to affirmative action, it does seem to be a signal example of reverse discrimination, but not only that, but one could draw the conclusion that the U.S. government has determined that Morse code for higher certification is indeed superfluous. Those who have a disability have a means of upgrading their qualifications without Morse code testing beyond 5 words per minute, while those that are able=bodied must demonstrate their capabilities. If Morse code is not required by those that are handicapped, why is there the necessity for those who are not must take the test?

An irony that is almost pervers.

I'm attempting to learn Morse code using SuperMorse - great program!
However there's an opinion that the "Koch" method is better than the
Farnsworth see - http://hawk.nmt.edu/~bateman/sara/finley.sm404.html
I cannot seem to understand the difference between the two.
Any advice would be very appreciated

First, not everyone uses a keyboard to copy code. You can verify this by sending poorly enough with a bug to keep a computer from copying. <g> Personally, I find code to be a refreshing change from the Internet and the last thing I want is to use a keyboard.

Second, there's a big difference between an on-air QSO with your own equipment and a conversation using someone else's transport system. The latter has been available for a long time in the form of telephones and mail. There's nothing quite like the challenge of communicating over long distances with nothing between yourself and the other person but air. That's partiuclarly true if you build the equipment yourself.

>So, fellow amateurs, what's out there that ain't in here? And is it
>really worth such a big chunk of my income?

It's possible to set up an efficient amateur station for much less than the cost of the typical 486 or Pentuum computer system. I run a KW on all HF bands from 80 to 10M and the total investment was less than a thousand dollars, plus some time. I could easily cut that in half without the amplifier, and I could half it again with a combination of careful used equipment shopping and homebrew.

I built may 486/66 from some spare parts(hard drive and Memory) and new parts for under $500. Thats not far off from the price of a good multimode rig!
Ted F.

I'm looking for information on the Ramsey FT-440.
I recently read an article in QST on modifing the Ramsey 2 meter
and 70 cm kit radios, adding PL, DTMF and uProcessor scanning etc.
It looks like a fun project HOWEVER I've heard the FT-440 is dificult
to build and align.
I would appreciate a response from anyone who has built the FT-440.
Please respond to my email address.

dpmoore@west.net

Thanks to anyone who can help

>: Its outright shameful how some supposed Elmers, respond to new HAMS.

Whether his observation was true or not, is really debatable, however,

it seems that Nate needed to be SOLD on the merits of ham radio. There
did not appear to be any effort on his part ...all he had to offer was
criticism of a hobby that I happen to like very much. I can only speak
for myself, of course, but if I am going to invest time on someone,
acting in the capacity of elmer, I expect some effort on the part of
the student.

If Nate, or any other prosective ham thinks that they are going to be
handed something on a silver plater, they are WRONG. This is not the
citizens band service and I believe all licensed amateur radio
operators should do something to EARN the right to be part of our
fraternity. Respect is a two way street..

I agree with KH2D, these two clowns need to get lost!

>You could fill a library with books whose sole topic is antenna theory.
>Heck, we even have an entire newsgroup devoted to antennas (rec.radio.ama-
>teur.antenna). Antennas are magic!

As you know, Jeff, the problem isn't the discussion of antenna theory.
Our "new breed" of amateur radio operator is more likely to run down to
the local radio shack or call HRO to "order" their antenna. Their thinking
is "gee, with all these commercially available antennas, why would ANYONE
want to BUILD one?"

Yet another fine addition to amateur radio thanks to the no-code tech
class.

>Why in the world would you copyright your senseless post?

Considering all posts are automatically copyrighted in accordance with
the Berne Convention, of which is US is a signatory.

>
>Can someone explain the difference between "intermod" and
>"front end overload"?

intermodulation occurs at the transmitter, when adjaecent strong
signals are mixed in the circuitry before the PA. cross-modulation,
or 'front end overload' occurs in the receiver. repeaters on crowded
sites use circulators and isolators to try to overcome the problem.
a filter might help at the receiver end. the new, wide range receiver
tend to have more cross-modulation problems. something like a Radio Shack
HT202 only receives 144 to 148 mhz, and is heaviliy filtered in that
range.

David

Glass mounted antennas work just fine around urban areas. I use
a Midland 2M cellular look alike. The SWR across the band is less
than 2:1 with noticable gain over a standard 1/4 wave MM. The only
caveat I would add is don't mount antenna on tinted glass windows
or rear windows with built in defogger wires. My antenna is mounted
on the top edge of rear passenger side window. No need to drill holes
for surface mounts.

> I cannot seem to understand the difference between the two.
> Any advice would be very appreciated

I'm not a big expert on this, but as I understand it Farnsworth refers to sending the individual characters at a set speed, usually higher than you are trying to learn. The spacing between the letters and words is varied to achieve the desired speed. In this way you can learn the individual letters at say 13 wpm and have enough space between them to copy 5 wpm. Pretty useful for training your ear to good higher speed code. Without Farnsworth you start out with long drawn out dits and dahs and 5 wpm and make the individual dits and dahs shorter and shorter as your speen increases. This would mean you have to constantly adjust your ear as the speed increased since the sound of the letters would be changing.

Some VE's will give you the option of taking your test with Farnsworth coding.

The Koch method uses Farnsworth code, but has a method of learning the code in certain groups. When used with SuperMorse you learn with random groups instead of sample QSOs or recognizable words. Make these random length groups and you really get a workout. After learning to copy this way you switch to words and then QSOs. There is a suggested sequence of learning the letters, characters, and numbers.

The beauty of the Koch method is that you cannot "cheat". Random groups cannot be anticipated like real words can.

So in summary, Farsworth describes how individual characters are sent and spaced, and Koch describes a method to use on top of Farsworth to learn the characters randomly at first and then in words and QSOs. Together you get a pretty good method to learn high speed code right from the beginning with a really good computer aid, SuperMorse.

Hope this helps.

Sexual preference is not a "Club" I would be happy to QSO with any amateur including one from LAMBDA. I do however ask, that if you want to be gay, be gay and SHUT UP about it. I am a hetero sexual with wife and three boys. Should I join a heterosexual amateur radio club? Should I wear a pin thats says "Straight and proud of it!" Should I march in the straight parade? I don't think so. Your sexual preference is a private matter and unless I ask you about it, trust me, I don't want to know.

Im not sure why a club called LAMBDA was ever formed, I dont get on the air and talk with other amateurs about my sexual interests, do gay hams do this? Does a gay ham feel more comfortable discussing antenna theory or new digital modes with another gay ham? Why the club? What purpose does it serve other than to tell the world hey I'm a ham radio operator and I'm gay!

I guess the long and the short of it is, whether or not LAMBDA is an ARRL affiliated club doesn't mean a hill of beans to me. How about you?

>initially and operationally.

I don't really want to get inveigled into defending/bashing the current level
of code proficiency required for different classes of licenses ... but
<plunge>
here goes ---

1. CW is a filter that requires a certain amount of commitment in order
to master (? :)) I realize that this is only a minor point, but should be
at least acknowledged.
2. The Amateur Hobby is actually tolerated/encouraged by the government
(at considerable expense! what is 1MHz at 220 worth?) not just as a fun
thing for nerds like me, but as a national _Emergency Resource_!!!
The advantage that a di-dah code has in an emergency is that nearly
ANYTHING may be keyed to make communication possible!
(Does anyone remember the POW that spelled T-O-R-T-U-R-E with
eye-blinks?)
Therefore a certain minimum level of on-off expertise is important within
that group.

I certainly do not think that 20WPM is NECESSARY for this ...
but it certainly identifies an operator that can use most anything.
Packet is typing --- Maybe a 30WPM typing test should go with a
"master packet" operator?
Voice is easily done by just about anyone --- except a few people

from brooklyn <grin> and the value in a "lights out" emergency is
also less.

I can see a limited code proficiency as being NECESSARY for a ham
ticket. If all hams needed 5WPM to get a ticket and then could advance
either with more stringent code or more arcane theory -- that would be
ok.

I agree that in the HOBBY sense that there are other modes that are
easier and more enjoyable... but the reason and price for our fun is
our ability to communicate with a tin can and string, a mirror, or the
back porch light. I do not think that there is a "cheaper" mode than CW
that can be found.

3. Even if in the normal course of things, CW is not the "mode of choice" for
all amateurs --- the "Hobby Aspects" are there as well. Not too long ago, the
Army reserve used to help fund "Hobby Marksmanship" --- even though modern
wars are fought with land mines and bombs. The "proficiency level" of a very
few got to the "award" class --- but the proficiency of a _LOT_ of people made
it to the "competent --- no toes shot off" class. Therefore, an incentive to a
level of competence in CW that few can reach has given us a core of competent
people in a mode of communication that is cheap, reliable, and easily cobbled
together at need.

I guess it is time to get off my soap-box <stumble ... CRASH>
Regards,
Ed

No; the use of tactical callsigns (that's what they're called) does
not relieve you of the requirement to Id with your FCC-assigned call
sign at the usual times. A look at Part 97 or the ARRL Rule Book will
verify this.

> that the FCC has sole jurisdiction over antennas and that the town can only regulate the height
> of antennas.

I hope you didn't pay a lawyer to tell you that - it's dead wrong. Antennas and their support
structures are *most certainly* regulable by local ordinance, as long as the regulations are not based on
certain criteria, like RFI, that *are* the FCC's sole jurisdiction. Cities can regulate structures, whether
antennas or not, for a great many reasons, not just height. Although recent FCC rulings and court decisions
have reduced local authorities say to a degree, they can still regulate based on appearance, for example.

6030. Re: New Zealand forcing CW to be dropped international

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: jherman@Hawaii.Edu
Message-ID: <DqEIqu.4Ln@news.hawaii.edu>
Source record: 226851

>>The term "obsolete" simply means that a method is no
>>longer the most efficient of all available choices.

Oh, are we revising the dictionary? By your definition, postal mail delivery is obsolete. Yet the postal services of the world still haul millions of pieces of mail daily, and we are all very dependent upon them and will be well into the next century. Explain how we could possibly be dependent upon an obsolete service?

>>CW which ultimately is the
>>most simple of all digital modes!

You bet! Simple to build and simple to operate.

>>Why should we have stiff
>>requirements for one of these modes, and totally ignore all of
>>the rest of them?

Because there is still stiff usage of that mode on HF. Voice and code are the two heavy weights on HF so it's only natural that we have a skill test for both of them. Consider the skill test for voice waived. End of argument.

>>:Why do we still hear commercial 500KHz stations on CW? Has the false economy
>>: been exposed? Inquiring minds want to know.

And out here in the Central Pacific 500 kc is still in heavy use.

>>I hate to tell you this, but our friends at the Coast Guard
>>on the west coast of the USA no longer monitor 500 KHz.

Due mainly to economics. That five months of Radioman school to learn the code cost you taxpayers $30,000 per radioman (1976 dollars - that's when I went through it).

>>2182 KHz SSB is simply better, and the CW capabilities of
>>its users are nothing to write home about.

Huh? Not too many boaters on 2182 except drunk Mexican fishermen singing to each other and playing with their Auto Alarm tone buttons. While at the Monterey Coast Guard Station that's all I heard night after night. Coastal 2182 kc comms have almost been completely replaced by the national VHF-FM system (with coverage out to a minimum of 100 miles along each coast). For transoceanic passages, HF voice, code and sitor are used.

73 from beautiful Hawaii,
Jeff KH2PZ (ex NH6IL, WA6QIJ, NMO)

6032. Re: Public Service IDing?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: kjones@sun-link.com
Message-ID: <317fa459.141367490@news.netrax.net>
Source record: 226899
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Once upon a time, Matthew Delaney wrote 13 lines on the subject:
Public Service IDing?; here's some of it:

>I've heard public service communications taking place, and they've IDed
>by saying such things as "check point 1", "finish line", etc... Is it
>legal to use this instead of their callsigns?

Yes and no.

Yes it's legal to use locations, etc. No, it's not legal to use
them exclusively, *in*place*of* assigned Amateur Radio callsigns.

Each station must identify according to FCC rules in the US at ten
minute intervals, and at the end of the transmission or series of
transmissions. This regularly equates to an ID every ten minutes,
and signing as the last thing the op says in an exchange. Some
operations have the Net Control Station (NCS) run a timer and call a
roll every ten minutes, thus relieving the individual operators of
the need to watch the time for the ten-minute rule.

Use the so-called tactical callsigns (checkpoint two, etc) to help
everyone on the net understand what's happening. If I need to comm
with the op at the first-aid tent, I couldn't care less what the
callsign of the op there happens to be this hour (and it will
probably change from one hour to the next). All I need to know is
that it's the first aid tent. I call the first aid tent. First aid
answers. We comm. When the exchange is over, each says their own
callsign. All is well, all is legal.

http://ftp.barc.org:8080/pub/hamradio/arrl/infoserv/rib/part97.txt
has the entire rule set. Here is the pertinent excerpt.

Quoted from the referenced URL--
S 97.119 Station identification.
(a) Each amateur station, except a space station or telecommand
station, must transmit its assigned call sign on its transmitting
channel at the end of each communication, and at least every ten
minutes during a communication, for the purpose of clearly making
the source of the transmissions from the station known to those
receiving the transmissions.
No station may transmit unidentified communications or signals, or
transmit as the station call sign, any call sign not authorized to
the station.
End quote

Note the last sentence about "not authorized to the station." The immediately preceding phrase "as the station callsign" makes clear that as long as the additional ident (checkpoint 99) is not used *as* the station's callsign (but rather *in*addition*to the callsign) there is no prohibition.

Use the location identifier (tactical callsign) as often as necessary to provide the desired support. Use your legitimate Amateur Radio callsign every ten minutes and at the end of the exchange to stay legal.

Enjoy your activity!
73,

Ken Jones

There isn't any harm in adding additional grounding electrodes or systems. The harmful situation is having independent grounds connected to different points in the house. What you want to avoid are ground loops through the house wiring.

Ideally, all wiring should enter and leave the house at one point, and all outside grounds should connect at that same point. What this does is prevent ground loops and improve the ground connection.

I have looked at the ARRL listing for those sites where testing takes place in the Metro Atlanta and the state of Georgia. However, there doesn't seem to be any place in the city of Atlanta or accessible by bus.

Sorry, I can't get to Lilburn or Snellville (or anywhere in Gwinnett County) unless they all of a sudden got connected to the MARTA system.

Especially that Terry Sullivan fellow. He hasn't even been implicated in the bombing. (Terry Nichols is the other fellow who's been charged.) I'd note in passing that a number of the Michigan Militia *are* amateurs, as were (I'm told) a couple of the Branch Davidians. And some of the Freemen are too (though I don't think any of those who are currently under FBI siege are). You'll find some of them posting in the militia groups with call signs in their sigs.

>Im not sure why a club called LAMBDA was ever formed [...]
>Does a gay ham feel more comfortable discussing antenna theory
>or new digital modes with another gay ham? Why the club?

Note that Lambda ARC (BTW, my knowledge of the club comes from the article in QST last year, and some postings made to USENET a while back from members; it shouldn't be considered authoritative) is for gay amateur radio operators "and their friends". So, the only people excluded are the enemies of gay hams. So, my guess is the gay members of Lambda wanted a club where they could discuss and do ham radio without running into the kind of hostility we've seen right here on this newsgroup.

>
>I guess the long and the short of it is, whether or not LAMBDA is an
>ARRL affiliated club doesn't mean a hill of beans to me. How about you?

I don't particularly care whether it is or not (just like I don't care whether the East Podunk Red Headed Ham's Chowder and Marching Society is an ARRL-affiliated club) but my opinion hardly matters. Given that LARC wants to be and ARRL-affiliated club, and meets the requirements, it's important to me that my ARRL not be used as a tool of hate.

This section of the FAQ is worded so as to be misleading at best.
Article 250 of the NEC is the controlling text in the US. It requires
that all Earthed electrodes be tied together, that includes any made
electrodes (ground rods), any metallic water piping systems, any structural
steel, any Ufer grounds (rebar in concrete), etc, and defines that
interconnected system as a single grounding system.

Article 250 only requires a single point connection for *neutral*, however,
and not for Earthed electrodes in general. The single point for neutral must
be in the distribution box. Other Earth connections can be interconnected via
the 3rd wire safety (green) conductor in the electrical wiring, by metallic
raceways, by bonding straps installed in convienent locations, etc. In fact

it is impossible to single point structural steel Earth connections since each vertical support represents a separate connection to Earth, but all of them are bonded together by the horizontal members in a complex lattice rather than a star.

250-21 allows exceptions to prevent objectionable currents on the grounding system. The toroid mentioned above is a permissable method of preventing objectionable RF currents from flowing over parts of the grounding system.

Now despite the NEC's permission to install a system this way, I would strongly encourage a single point be established for the ham station so as to short circuit any circulating ground system currents that may use any of the station equipment as a common path. This is what a ground window does, and I've expounded on that topic frequently here.

This does *not* mean, however, that all Earthed electrodes for the entire house have to be brought together at only one single point. That may be desirable in some cases, but it isn't required, and can be *undesirable* or impossible under some circumstances. Usually, a number of single points (ground windows) should be established near groups of equipment used together. And these single points can then be tied together in any convienent manner to form the total grounding system.

Source record: 226907

In article <8304340172801@iss.dccc.edu> wcoyle@dccc.edu (William Coyle) writes:
>
>The sheild from RG8 works good for the copper braid if you have some
>sitting around.

Coax braid is Ok for DC and 60 Hz AC ground leads, but it makes a poor lightning (and RF) grounding conductor. Smooth, solid, flat copper strap is much better. This is because of skin effect. As each strand of the braid dives into the bundle, skin effect forces the current to try to stay on the surface, and it does that by jumping from strand to strand via the relatively loose (and relatively high resistance) mechanical connections in the weave.

Incidentally, this is why flexible braided coax has higher losses than hard line, and why a twisted stranded inner conductor also has higher losses than a solid inner (for use as coax, dielectric losses are also a factor, though not of great importance below VHF, but when the braid is used as a grounding conductor, the dielectric inside the coax (if left in place) doesn't matter). The losses may seem insignificant at amateur power levels, but at the thousands of amperes of a lightning surge, the resistance is sufficient to elevate the far end of the conductor (tens of) thousands of volts above the local Earth potential. That in turn can lead to a potential for electrical shock, or for unintended arc paths to form. The latter can then allow currents to circulate through your equipment via unintended paths, causing damage, if very careful layout is not observed.

5 inch copper strap (also called roofing flashing) is what is commonly recomended for critical grounding conductors. Copper pipe can be used too, but it is a less economic use of copper since only the outside of the circumference will carry RF currents because the inside of the pipe forms a waveguide beyond cutoff for the RF. A flat strap allows both sides of the conductor to conduct, and so is equivalent to a pipe of twice the circumference of the strap's width, IE a 5 inch strap is equivalent to a 10 inch circumference copper pipe (3.18 inch diameter pipe). If you were to pound a 3.18 inch copper pipe flat, it would form a 5 inch strap with twice the thickness of flashing of the same gauge as the pipe material, so you'd be using twice as many pounds of copper for the same electrical effect. Since copper is expensive, using flat strap is more economic.

You might try the following [if there's a more sophisticated way to do
this, I'm not aware of it]

1) After dialing in the frequency of interest, press 'PAGE' until you're
in either the PAGE or CODE mode

2) Press 'CODE' [really F-PAGE]

3) Press the up or down arrow until you've reached code slot 7

That oughta do it...

From: darryl.linkow@grinder.com
Message-ID: <8BF5277.016B005658.uuout@grinder.com>
Source record: 226911

Hello all and thanks for reading this. I just acquired an old Saturn 6 antenna and am having a difficult time getting the SWR down below 2.5 to 1. I am using the MFJ-259 analyzer. I am just curious if perhaps part of the antenna is missing? There are two screws attached to a piece of phenolic board. I have attached the shield and center conductor of some RG-58 coax to these screws as the feedpoint. I am just curious if perhaps there is a tuning device (other than the capacitor plate adjustment) or a balun that should be connected to these screws on the phenolic board that might be missing? Also, might anyone have an instruction sheet or manual that came with the antenna that I might get a copy of? Any help would be appreciated.

6046. Re: Amateur Radio? I don't know anymore...

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <4lohac$97q$1@mhadf.production.compuserve.com>
Source record: 226913

Is amateur radio worth a big chunk of your income? Maybe not, but that's a false identity. Amateur radio doesn't need to be expensive. A $500 transceiver and a wire antenna can still give you the thrill of a DX contact.

OK, if you enjoyed those contacts mainly because you liked the idea of finding out what people were like in other parts of the world, then Internet Relay Chat may do the job for you. For me, it's a combination of the person to person contact combined with the shared miracle of radio waves finding their way from one antenna to another.

And when it comes to interacting with one's kids, I still think there's a sense of satisfaction that comes from being up on the roof, carefully assembling (or building from scratch) a beam antenna, then sending Dad (that's me) off in the car with the portable rig while the junior op mans the base station for pattern measurements. A kid who's built an antenna, and better yet one who's made a series of antennas with varying configurations and measured the results, is doing real live science and engineering. A kid who's surfing the net is just a user.

Don't let me, or anyone else, tell you what you should enjoy. If the Internet gives you what you want, for less cost than radio, well and good. But perhaps there are assumptions being made, or possibilities being overlooked, that would reinvigorate your love of radio -- not too strong a word, as the root of "amateur" constantly reminds us.

When I think of all the things that a ham license lets me do that I still haven't tried, it makes me glad that I'm going to live to 120 or so. I'll need the time after retirement for moonbounce, radio control, antenna experiments...

73,

- Peter

I am looking for a dead FNB31 battery for a Yease FT-51R. I am willing to pay for the shipping and give the person a few dollars for the trouble of packing it up. I want to use it as a dummy battery in the PA10 Mobile Charger, it will just be conducting the 12V DC for me.

Also if anyone has any info on a "Ear Mike" I would be very inerested in hearing about them. I need one for noisy conditions (convertable car).

Drop me an email and we can work out the details.

6049. GB2RS News 28th April 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <830487288snx@llondel.demon.co.uk>
Source record: 226916
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 28th of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Next Saturday, the 4th of May, the Radio Society of Great Britain invites members and non-members to visit its Headquarters at Potters Bar, just off the M25 in Hertfordshire. The popular Annual Open Day includes guided tours of the HQ offices, the National Amateur Radio Museum and Library, the GB3RS shack, traders, staff, committees, the RA and SSL. Refreshments will be available. A map can be found in the RSGB Call Book, or is obtainable by calling the RadCom office on 01707 659015, or faxing 01707 649503. Non-members of the Society are especially welcome to come along and see what the RSGB does for them.

The rules for this year's QRP Fun Run, which takes place in conjunction with the Yeovil QRP Convention, appeared on page 75 of April's RadCom. Please note the following additional details about contacts. Stations may be worked once only on each band during the event but Fun Run Bonus Stations - all operating each evening randomly for one hour on each band - may be worked once each evening per band. The event takes place from the 7th to the 10th of May. For further details contact Peter Burridge, G3CQR, on 01935 813054.

The sporadic-E season got off to a lively start last Sunday, the 21st of April, reports Martin Harrison, G3USF, chairman of the RSGB Propagation Studies Committee. Between approximately 1100 and 1430 UTC, 6 metre operators in most parts of the UK were able to work into Italy, former Yugoslavia and the Czech Republic with S9 reports. Around these times, many contacts with the same areas and with Austria were also made on 10m. However, it is likely to be several weeks before such openings become almost daily occurrences.

Also from G3USF, this time wearing his IARU Region 1 Beacon Co-ordinator hat, is news that another new beacon has joined the International Beacon Project worldwide network. 4X6TU in Tel Aviv is now operational on 14100, 18110, 21150, 24930 and 28200kHz with stepped powers of up to 100 watts to a vertical antenna. This is on a three minute cycle with 10 second transmissions on each frequency in turn. It joins ZS6DN, LU4AA and YV5B while JA2IGY is expected on air soon. The network, once it is completed next year, will comprise 17 five band beacons synchronised by satellite control.

An RSGB Regional Open Meeting has been arranged by Fred Stewart, G0CSF, Council Member for Zone C, which covers the south-east of England and East Anglia. The meeting will take place on Sunday, the 26th of May, at

Rivenhall Village Hall, Church Road, Rivenhall, Witham, Essex. RSGB President Peter Sheppard, G4EJP, is due to attend, along with Executive Vice President Ian Kyle, GI8AYZ. For further details contact G0CSF on 01732 780721.

The following statement has been issued by the Council of the RSGB:

Council wishes to inform members of the Society that G Reilly-Cooper, G0MAM, no longer acts as the RSGB Emergency Communications Officer. Council wishes to place on record the Society's appreciation of Mr Reilly-Cooper's past efforts in this field of amateur activity.

The vacancy for the position of RSGB Emergency Communications Officer will be advertised in the Society's journal and all applications will be treated on their merits.

Until such time as an appointment is made, queries relating to talk-through permits should go to the Licensing Advisory Committee Chairman I D Suart, GM4AUP, whose address is correctly shown in the current RSGB Call Book.

Any other enquiry relating to Raynet matters should be directed to the Membership Liaison Committee via the Chairman, I J Kyle, GI8AYZ, at his home address also shown correctly in the Call Book.

Council reiterates its wholehearted commitment to the role of Raynet groups in training for and providing emergency communications and will, to the best of its ability, continue to fully support all groups wishing to be affiliated to the Society.

To this end, the Radio Society of Great Britain proposes to host an open meeting later this year in order that all who have an interest in the field of emergency communications may make a contribution to the formulation of a policy for the future.

The venue and date of this meeting will be published well in advance.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Menorca in the Balearic Islands, ED6IDM will be active over the weekend of the 4th and 5th of May.

From Grenada, J37Q and J37P are operational until the 7th of May at the low end of the 20 metre band.

And from Svalbard, OZ8RO will sign JW5HE until next Sunday, concentrating on the WARC bands, especially 30 metres.

Two Japanese islands will be activated this weekend:

On Uji Archipelago, JA6VZB/6 will operate today, the 28th, using CW on 7001, 10115 and 14040 kHz.

And on Tsushima, JA6WIE will operate until the 30th of April, and JR0GFM will operate from the 5th to the 7th of May.

Next the Rally News:

Today, the 28th of April, the Marske-by-the-Sea Radio Rally is held at the Marske Leisure Centre, in the High Street, Marske-by-the-Sea, near Redcar. The event features the usual traders and a bring and buy stand. Doors open at 11.00am.

The British Amateur Television Club Rally also takes place today, the 28th, at the Sports Connexion in Coventry. The event features outside broadcast TV displays, traders and a bring and buy stand. Doors open at 10.00am, or 9.30am for disabled visitors.

Next Sunday, the 5th of May, the Anglo-Scottish Rally is at Tait Hall, Kelso. Doors open at 11am, or 10.30am for disabled visitors. Talk-in is on S22. The event features trade stands, a bring and buy stall and a raffle. For details contact Gavin, GM0ALW on 01573 226372.

The National Vintage Communications Fair also takes place next Sunday, the 5th, at the NEC Birmingham. There will be more than 300 dealers selling items relating to early technology and doors are open from 10.30am to 5pm. For further details telephone 01398 331532.

On Monday, the 6th of May, the Dartmoor Radio Rally takes place at Yelverton Memorial Hall, Meavy Lane, Yelverton, Devon. Doors open at 10.30am and there will be access for disabled visitors. Talk-in is on S22. Telephone 01822 852586 for more information.

Also on Monday, the 6th, the Mid Cheshire Amateur Radio Society Rally takes place at Civic Hall, Winsford, Cheshire. For more details telephone 01606 77787 during the evening.

Now news of a special event station:

GB0RCO will be in use from Rishworth School, Ripponden, West Yorkshire, next weekend, the 4th and 5th of May. The station is to celebrate the reopening of the Rochdale Canal at Sowerby Bridge. Operation, from 10am on the Saturday to 4pm on the Sunday, will be on 80m and other bands, SSB and CW, using a G5RV. Further details can be obtained from David, G0DLM, on 01422 202306.

The ATV repeater, GB3RT, which operates on channel RT1-2, was taken out of service for maintenance on Monday the 22nd of April. Details of its return to service will be reported as soon as they are known. Further details can be obtained from Graham Hankins, G8EMX.

Now for the HF contest news:

This weekend, the 27th and 28th of April, the Helvetia Contest takes place on the HF bands from 1300 UTC Saturday for 24 hours. Operation is on both CW and SSB and brief rules are on page 21 of the April RadCom.

On Friday, the 3rd of May, an event in the RSGB Slow Speed Cumulative contest takes place from 1900 to 2030 UTC. Operation is on CW only between 3540 and 3580 kHz. The full rules can be found in the September 1995 edition of RadCom.

Next weekend, the 4th and 5th, the Italian ARI DX Contest takes place on the HF bands from 1200 to 1200 UTC, using CW, SSB and RTTY. Brief rules are on page 21 of the May RadCom.

Next some VHF contest news:

On Saturday, the 4th of May, the RSGB 10GHz Trophy Contest takes place from 1400 to 2200 UTC on all modes.

Also on the 4th, the RSGB 432MHz Trophy Contest runs from 1400 to 2200 UTC on all modes.

And next weekend, the 4th and 5th, the RSGB 432MHz to 248GHz Contest takes place from 1400 to 1400 UTC on all modes.

The full rules of all RSGB contests are in the Rules Supplement sent to all members with the September 1995 RadCom.

And now the solar factual data for the 15th to the 21st of April:

The 90 day solar flux average on the 21st was 71 units, the same level as last week. Electron fluence levels were mainly at a very high level while x-ray flux levels remained at A1 units. Geomagnetic activity was at "sub-storm" levels on most days and this activity was due to a coronal hole in the sun's southern hemisphere. The only "quiet" day was the 16th with an Ap index of 10 units and the average for the period was Ap 20 units. The aa indices are now distributed on the packet network.

Now the ionospheric data for Central France. The period from the 12th to the 18th of April saw levels increase to 7MHz on the 13th but then decline to 5.1MHz by the 15th. However, levels increased again to 7.5MHz on the 17th to give an average of 5.9MHz. The darkness hour lows increased and were up to 3MHz by the 17th, making the average for the period 2.5MHz. The daytime highs were between 1800 and 2100 hours except on the 18th, when they were at 1300 hours. The darkness hour lows occurred at 0400 every day except on the 17th, when they took place at midnight.

And lastly the solar forecast. Solar activity is expected to continue at quiet levels, and solar flux levels are expected to decline to the high 60s as the quiet side of the sun rotates in to view. Geomagnetic activity is expected to be mostly "quiet" for the coming week. Ionospheric MUFs for the south during daylight hours are expected to be about 18MHz and 15MHz for the north. The darkness hour lows are expected to be about 11MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa

Bravo and M1 Alfa Alfa series, and Novice calls in the 2 0 Alfa Oscar
and 2 1 Echo X-Ray series.

Gary Ross Hoffman <gary@carcs3> wrote:
>Can someone explain the difference between "intermod" and
>"front end overload"?
>Thanks

I'm surprised that no one has followed up on this simple yet
pointed question. Many hams talk about intermod yet I suspect
that few know what the term really means.
Maybe its in the wrong newsgroup. *rec.radio.amateur.misc*
seems to mostly contain followups to Burt, code debates, FM-25
testimonials, and attacks/defense of ham radio in general.
I will crosspost this to *rec.radio.amateur.equipment* and
route followups to that group which is closest to the technical
segment of ham radio, apparently a declining vestage.

Its been said that the best way to extract correct information
from the Net is to first post incorrect information, so here
goes:

Front End Overload occurs when a nearby strong signal drives one
or more of the active devices in the initial RF circuits of a
receiver into their non-linear regions. This may create
additional products due to the mixing action of the non-linear
device. The result may be spurious signals all over the band.
In other cases it may cause the receiver to become deaf to weak
signals because the active device has been shifted out of the
weak signal region.

Intermod, or Intermodulation occurs when a strong signal that
is not within the receiver's passband is amplified by
successive stages anyway until it is strong enough to overload
an active device and drive it into a non-linear condition. In
this non-linear condition the device will mix signals with other
weaker signals as well as the intended signal. Many more signals
will be created by the sum and difference of the mixing action.
Some of these product signals may fall within the Intermediate
frequency passband and be further amplified by the receiver.
This is similar to front end overload except that the offending
signal was not strong enough or close enough to cause initial front
end overload. It was instead amplified within the receiver's
early stages until it did eventually cause an overload condition
in a downstream stage.

Both of these problems can be cured with tighter filter circuits
on the front end of the receiver, preferably before any active
devices. Cavity filters work good for VHF/UHF but are expensive
and too narrow sometimes. Another cure is reducing the RF gain.
If the spurious signals suddenly go away while turning down the
RF gain, suspect that intermod was occuring within the RF stages.
Vacuum tubes are not as susceptable to either of these problems,
I don't how susceptible the various flavors of FET's are compared
to bipolar transistors.

A related subject not curable with any of these methods is the external
mixing at dissimilar metalic joints which may create mixing products
outside of the receiver. A local rusty rain gutter for instance.

Let's not followup to this with statements like 'go read some ARRL
book". Please.

```

This is a DF circuit based on the article by K8DTS in May, 1993 QST. I recommend reading that article for hints on circuit operation and use. The 2N2222 can be any general purpose NPN transistor such as 2N3904, 2N4400, etc. I used a 2SC945 which is as common as dirt in old Japanese transistor radios. The 1N914s can be any low-capacitance signal diode, 1N4148 being an acceptable substitute. Don't use recitifier diodes. All capacitors are ceramic disc or monolithic, nothing real critical here. You might want to play with the .047 cap and the two resistors on the 555 if you'd like a different tone. See 555 apps notes. The switch is a DPDT w/ center off position. Set to "df" position for direction finding, "off" to shut everything off, "stdby" to connect one antenna continuously to the radio for just listening. The battery is the rectangular 9V transistor type. For antennas, I used two half-wave dipoles mounted at opposite ends of a half-wave-long stick, with the circuit board mounted in the middle. Make the two antenna coax the same length for proper phasing. The radio coax length is not critical. I just made mine long enough to reach the radio on my belt, with the stick held up at arm's length. Ground all the coax braids at the circuit board. Provide some sort of strain relief for the coax. You might want to put a .001 capacitor in the coax to the radio for DC blocking.

I've successfully found foxes using this circuit and an IC2AT, so it works!

>(Yawn) As usual, drew spews assumptions and mis-information. You
>cant get AIDS from a blood transfusion.

Is that so, Chris? Gee, now you're not only a self-appointed "expert" on amateur radio, but on modes of AIDS transmission as well.

You better read that Journal of Medicine again, Chris. You most certainly CAN contract HIV (which, in case you didn't know is the virus which causes AIDS) through a blood transfusion if the donor is HIV-positive!

Your mis-information could prove to be deadly in this instance, Chris.

Duh!!

Does anyone know if there is a website out there that has a database of repeaterr frequencies ?
This would be similar to the ARRL directory, or something like it. Seeing as how my local provider can't update any of my HR NG's, please reply via E-Mail only, ootherwise I'll never see
it.

6068. Farnsworth vs Koch

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <4lo3nb$daq@orion.aoc.nrao.edu>
Source record: 226935

There is no conflict between the two. Farnsworth is simply sending
the characters at a higher speed than the overall sending speed,
e.g., 18 wpm characters sent with enough space between them to make
an overall sending speed of 5 wpm, as the ARRL VE exams are done.

Read the full article on Koch at:

http://hawk.nmt.edu/~bateman/sara/finley.morse.html

The article you cite is only the details about using SuperMorse
for implementing the Koch method.

I recommend doing your Koch drills and incorporating the Farnsworth
spacing -- 20 wpm characters spaced out to an overall sending speed
of 15 wpm.

Message-ID: <830445364.AA06142@hamlink.mn.org>
Source record: 226936

Imagine that the Amateur Radio Service did not exist,
but was going to be opened to applicants the first day of
next month.

Assume:
1) that the basis and purpose would be as stated in
FCC rules 97.1.
2) that the current spectrum allocations would be held.
3) that all the modes we use today were already invented.
4) that there would be a single class of license.
5) that there were no ITU rules in place.
6) that licensing examinations would be administered by
a large group of volunteers as is presently done.

Imagine that YOU have been asked to determine the entrance
requirements for this new service.

Ignoring the FORMAT of the test (as long as we're
pretending, we'll pretend a perfect testing vehicle has
been invented), what knowledge and/or skills would you include
in the qualification test to become a licensee? In other words,
what would be the CONTENT (not the methodology) of the entrance
examination?

>But the code/no-code debate is not analaguous to me, the tax payer.

Amateur radio costs you, the taxpayer, every year. What percent of the
FCC's budget goes towards amateur-radio-related activities (applications,
monitoring, fining, etc?) Are not you, the American taxpayer, asked to
subsidize this cost every year, just as you are asked to subsidize the
welfare-state programs?

Furthermore, amateur radio consumes valuable spectrum that could be
sold. That money could reduce the deficit, and directly affect the
amount of taxes you will have to pay to finance the deficit and
national debt.

>unacceptable, but impractical.

I merely stated a fact. It is no more unacceptable or impractical
than any other truth.

>Although you are entitled to your opinion, your attempt to drag me
>into a viewpoint that is unacceptable is uncalled for.

Whether you like it or not Jim, what I said is directly related to
your previous post. It is, in fact, the basis for the "perverse"
nature of the U.S. rules that you so clearly pointed out. Even a
cursory inspection reveals that socialism extracts a higher toll from
those who are capable than from those who aren't. You don't want to
accept the analogy, but it is absolutely appropriate and it explains
the mystery that you would prefer to leave undisclosed (and
undiscussed).

>Please desist.

This reminds me of an English couple I met a few years ago. First
they stated that Thatcher would be greatly offended by anyone who
called her a socialist. Then, in the same breath, they justified
their government's behaviour on the grounds that most people prefer
guardianship to freedom.

It takes some pretty tall boots to wade in on that side of the fence.

> Can someone explain the difference between "intermod" and
> "front end overload"?
> Thanks

I'll give my shot but will appreciate any correction.

For this discussion each signal is a pure carrier sinewave.
It should also extend to an AM or FM signals.

Intermodulation is generated when two or more signals are
amplified by an amplifier that has some non-linearity. The
results are additional frequencies that do not contain in
the original signals are generated. For example, Fa - Fb,
2*Fa - Fb, 2*Fb - Fa, etc. may be generated. When these
intermodulation products fall in the passband of the radio
IF, audible results may be heard.

Frond end overload may cause two different effect. First
is that a strong unintended signal gets in the frond end
and interfer with the AGC and the resulting reduction in
gain causes the desired signal to be lost. Second is that
the high signal level may drive the frond end amplifier to
enter a non-linear mode and cause intermodulation.

> Any advice would be very appreciated
>

I have also read about the Koch's method. It sounds very appealing to
me. I think if I am to learn Morse, Koch's method is the one for me.

I think the basic difference between the two methods is that the
Koch's method does not allow your brain to do the translation. The
Farnsworth's method will send at say 22 WPM dit/dash rate but leaving
a long pause between characters so you can mentally replay and
recognize the characters. The Koch's method will play each characters
at 22 WPM so there is no time for the translation. It also throws only
two characters at you so there is a 50% chance you will guess it right.
But the nice thing I think is that there are only two characters to
learn and hopefully you will soon learn the two character at 22 WPM
speed. After that, you will learn only one additional character
while reinforcing the old ones. Farnsworth's method does not require
this.

It (including the Maxxon[?] version) is the only one I know of that can
do different transmit and recieve PL's "right out of the box" without
sacraficing memory locations.

Also, the fact that it's 2M _only_ allows it to have a tight filter on
the front end, so it's much more impervious to QRM.

6086. Standing Your Ground

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: adell@planet.net, NJ
Message-ID: <4lmqpp$3l8@jupiter.planet.net>
Source record: 226959
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The following was reprinted with permission of the author and KB2AMH

"So your a ham and you think you've made the correct decision where you will live.....

THINK AGAIN!!!!"

That exactly what Kurt, KB@AMH thought when he and his wife decided they would sell their home in West Caldwell, NJ and purchase another in the SAME town. You see Kurt has been a ham for 9 years and always wanted to put a tower. But knowing he needed a larger home for his growing family, put the tower project on hold. Kurt wasn't about to make an investment in a tower and then leave to move inot a newer home. It would have to wait until they could move.

Kurt did his homework, or so he thought. There were plenty of hams in his town, 52 to be exact. And quite a few had towers already. In fact, 9 years prior, Kurt was present at his town's board of adjustment meeting regarding a variance application made by Mike, WA2JUN. Mike put up his 110 foot tower prior to any approval by the town of West Caldwell, but evetually the board required and approved a variance for Mike. It was obvious to Kurt that there was a precedence in town when he and his wife made the decision to stay in West Caldwell.

A little over a year after they moved, Kurt made an application to the town to erect a 72 ft carnk up tower with a 20 ft mast. The townm denied the application citing a 13 ft height requirement and a previous interpretation by the board of having to meet accessory structure requirements. A variance application was suggested by the town and subsequently applied for.

In fact, it was suggested by the town, that 2 types of variances be applied for. Originally a "C2" variance, then a "D" variance. Citing that the "D" type may be necessary as the board may decide that the tower was a primary structure and not an accessory structure. (This was the beginning of the run around the town would give him). For those of you who don't know, only a primary structure, like th house you live in, can be considered a ratable, where the town can add additional taxes on your property.

Kurt could see the handwriting on the wall and hired an attorney, KB2BX, to guide him through this
process. In the meantime, Kurt prepared the application papers, wrote a check to the town for $315
and notified neighbors within 200 feet of his property as required by the town.

After 3 informal meetings and 1 formal meeting, and various letters from the towm demanding all
kinds of things..this is how it boils down. The town demands:

1. Height of the house
2. Exact dimensions of proposed antenna in all directions including a picture of the same
3. Approval from the FAA (Kurt's home is located near a local airport)
4. An initial escrow payment of $2000 which had been reduced from $3500

The height of the house is of no consequence and has been furnished to the town.

Although approval from the FAA has taken months to aquire because of the governmental shutdown, the interest of aeonautical safety was always foremost and never was an issue. This approval has been obtained and was furnished to the town.

The town does not have an ordinance regarding antennas, but is trying to regulate it. It is clear
that the FCC has sole jurisdiction over antennas and that the town can only regulate the height
of antennas. But yet the town 10 years earlier had approved a taller installation

By virtue of demanding $2000 be held in escrow, the town is attempting to place every obstacle
in the path of the variance application. The town plans to use this money to obtain people who
would testify againbst Kurt's position. This is discriminatory. No money has ever been asked
of any tower appliacnt in the past. This flys in the face of equality under the law.

Kurt is filing suit in Federal district court against the West Caldwell board of adjustment. But
this should be a battle he alone should not shoulder. It is every to hams benefit when faced with
oppostion like Kurt, that hams "STAND THEIR GROUND" and don't let local governments run roughshod over them. This becomes an emotional, spiritual and finacial battle hard to conquer.

Kurt can be reached KurtKB2AMH@aol.com

Some people like to skydive, some like to climb mountians (Everst, K2, etc.) , and alot of other dangerous things I would not do. But I leave it up to them to decide for themselves what is to dangerous. If someone wants to watch a tornado, do it. But the minimum you should know befor running out to watch one is that they are unpredictable, and you could be killed. If you understand this and still want to watch. Have fun and good luck!

Source record: 226961

Front end overload is simply reciever interference caused by a strong signal near the antenna system. Intermod is, as I can best explain it, a mixing of two or more transmitted signals, whose frequency sum/difference is a frequency being used by an unrelated station.

absolutely nothing.

To answer the question, a kpc-3 is a kantronics tnc alot like the tiny-2,
or similar. it supports hostmode, terminal mode, kiss, and has a built in
wild node feature. several different software packages support it, like
paket and kamterm, and it will also run sp and tcpip software.

>>73, Dale, NJ8X

I have noticed several references to contacting the ARRL for help on local tower ordinances.......

I wrote the ARRL (via email) over a month ago with some questions and a plea for reference assistance. I never got a reply of any type from the ARRL....not even an acknowlegement.

Please, no flames. I'm not knocking the ARRL. I am a full supporting member. (Though any correspondence would have been better than none.) I didn't pursue the issue as I didn't run into the expected problems here that I had anticipated. Have already got all my paperwork and permits in order and the tower is laying in the back yard. Just need to get the hole dug and concrete poured.

Download a copy of the FCC's PRB-1, available here on the net. I had it available for backup, even though I didn't need it.

Best of luck.

San Rafael is a close suburb of San Francisco. There will be repeaters
on virtually every available repeater split on you ht. The ones
closest to you will be the K6GWE repeater system at 146.70 -600,
147.33 +600 (both PL 179.9) and 443.250 + 5.0 (PL82.5). Virtually all
Bay Area repeaters require PL. Enjoy you stay...73..gus wa6wbc

>ferrite toroids. This link prevents RF injection into the mains, but
>makes sure that my set is grounded to the mains earth. There is no direct
>connection between the rig and the mains earth apart from this.

While this may be the thing to do in the U.K., I would recommend
against it. From the wiring faq (misc.consumers.house, sci.answers,
news.answers, and other places):

Furthermore, there should only be one grounding system in
a home. Some codes require more than one grounding electrode.
These will be connected together, or connected to the neutral
at a common point - still one grounding system. Adding additional
grounding electrodes connected to other portions of the house
wiring is unsafe and contrary to code.

Your connection connects extra grounding electrodes to the wiring
of the house. The FAQ is written for North America (U.S. and Canada),
but I would suspect that multiple ground (earth) connections is
inappropriate for good reason. Your connection through a toroid
is a fairly direct connection at power line frequency.

-I've heard public service communications taking place, and they've IDed
-by saying such things as "check point 1", "finish line", etc... Is it
-legal to use this instead of their callsigns?

This comes up from time to time. Tactical callsigns (Checkpoint 1) can
be used, BUT DO NOT constitute valid ID. You must also use your callsign.

Tacticals make it much easier for everyone involved (no need to remember
who is on duty at "finish line" right now), and are very commonly used
in public service events. At the end of your exchange with net control
(or after 10 mins, if you are taking that long...), just sign with
"checkpoint 1, n1ist clear"; that satisfies the FCC requirements on ID'ing.

(Actually, please use your call instead of mine :-)

Well, you're in luck! The ARRL is a political organization. They'll [LAMBDA]
fit in as well as any other political entity club.

> Don't get me wrong. I'm NOT a bigoted or prejudiced person. I just
> wonder what LAMBDA hopes to accomplish by having it's own ARC become
> affiliated with the ARRL as an ARRL-affiliated club.

Why would any club become ARRL affiliated? There is zero benefit for the
club, and great benefit to the ARRL in a political or Special Interest lobby.
"We have XXX affiliated clubs," says the man. "Oh, well gosh," says the
Congressperson (Maybe even a homosexual Congressperson like Barney Fag).

> I'm also afraid of what might be next. The Michigan Militias of this

> individual people such as Timothy McVeigh & Terry Sullivan?? Should they
> be allowed membership even though they stand accused of the most hideous
> crime in U.S. history??

Just because a group of people like anal and oral penis sex (sodomy) is no
reason to accuse them of murder. Any mental disease would be a good example.
Does the ARRL allow clubs with Handicapped people to become affiliated?
Do Hams have a Handi-Ham program. Since many handicapped people are mental
handicaps, should one mental problem be allowed, and another not allowed?

> Ohhh, how I *DREAD* the thought of HAM RADIO - our PRECIOUS RF spectrum -
> could very well be conceivably used in the next domestic terrorist attack...
>
> That's what *I'm* worried and concerned about!!

I can't imagine why a sodomy club would want to become a mass-murder club.
Your logic (as usual) is highly defective...

Do you have a scope?
Do you have a sweeper?
Do you have a schematic?

This radio is so old, it can be junked without blinking an eye. The
performance was marginal when it was new. But if you are serious,
you need to rent some good equipment and align the L.O. and Synthesiser.
Then go in and align the IF.

Even then you may have birdies...

Another good reason for grounding all your equipment is electric shock. Even though your power supply has a 3 wire plug, and is grounded, the rig connected to it is not. The DC connection from the PS to the rig is not good enough to keep your hair from standing on end in the event of an internal failure. Grounding your equipment to a common ground (copper rod driven into the ground) and tying all of your equipment together on the grounding lugs is a good idea.

The sheild from RG8 works good for the copper braid if you have some sitting around.

Source record: 226977

Greetings everyone...

Just a quick note to mention that everyone hopefully received their copy
of the Spring 96 VE6. This was a province wide mailout to all callsigns
across the province of Alberta.

I am aware that some people got several copies of this magazine for calls
they own but very rarely used, calls they used to own, calls of repeaters
they own, etc etc etc.

If there was any data on this mailout eg wrong postal code, don't own that
call anymore etc etc.

Send this information up to Norm VE6VW his address is norwal@oanet.com,
prior to the First of May.

Also if you are a newly licensed ham in Alberta please send your info to
Norm to get this entered for the 1996 Guide.

Repeater owners, any changes in your repeater callsigns or owners send ths
information up to VE6VW as well.

Your input will assist in keeping the ARLA Guide up to date.

Reminder to get your 1996 guide, it is available only to ARLA members,
see the back page of the VE6 for more information.

They are kinda the same. Farnsworht is learning the chars at the
target speed<18 wpm is the accepted norm but I used 22> with spaceing
between the letters great enough for 5 wpm.

Koch recommends just one letter @ a time then adding a second and
so on and so forth. All your doing is strong arming it. Farnsworth
isn't really a teaching method but a method of sending the code that
has become the standard.

6111. Mobile crankup tower -- any manufacturers ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: Mat Eshpeter <mat@clearnet.com>
Message-ID: <4lnvtr$r1g@arl-news-svc-2.compuserve.com>
Source record: 226984

My company has a requirement for a mobile crankup
tower; that is, a crankup tower mounted on a trailer.

Can anyone help me by providing me with manufacturers
who may be able to build (or already have) such equipment ?

Thanks for any help.

(Yawn) As usual, drew spews assumptions and mis-information. You
cant get AIDS from a blood transfusion.

Good advice to everyone...ignore this guy.

Take care.

Yep, that's almost exactly what I've had in mind for some time. In the long run, though, we need to get away from the simple-minded easily-memorized question pool format and come up with some sort of dynamic test that can be custom-generated on the spot. If we're gonna drag the amateur radio service into the 90s, why keep a 1950s test format? If it takes rule changes, so be it.

6115. Are telephone DTMF the same as our DTMF

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-25 00:00:00 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9604251402.AA01513@tix.timeplex.com>
Source record: 226988

Some mis-information has been given abt DTMF from several sources
but this is my try at it:

DTMF is defined by several US sources including EIA-464A and
Bellcore in their document, SR-TSV-002275 (formerly Notes on the Network)
BOC Notes on the LEC Networks, issue 2 April 1994. The International
CCITT standard is Q.23. **The tone pair frequencies are exactly the same
world wide, EIA, Bellcore and CCITT.** There may be differences in
transmitted levels and call progess tones from country to country.
The column 4 digits which are ABCD on some touch pads are used
primarily by the US military for pre-emption and are designated Priority,
Immediate , Flash and Flash Overide (White House level). Per Bellcore
documentation, the column 4 digits have no application in the PSTN
(that's why regular telsets don't have 16 digit dial pads.) So as long
as the DTMF digits from any telset, 2 meter radio or other source
hit the phone line at a nominal -7 dBm per tone (-4 dBm composite)
the call will go through.
The usual failure of dialing DTMF on land mobile or ham rigs into
the PSTN is related to to probelms that frequently occur:

1. If the signal to noise ratio is too low, e.g. speech or other noise
is sent along with the DTMF, some DTMF decoders will reject the digits
because they recognize the noise as speech (this is to prevent falsing).

2. If the higher frequency of any DTMF tone pair is more than 4 dB
weaker in level than the lower frequency of that tone pair, the phone line
(the PSTN) may or may not recognize that digit.

>
>Im not sure why a club called LAMBDA was ever formed, I dont get on the
>air and talk with other amateurs about my sexual interests, do gay hams
>do this?

I'm glad to hear you've never discussed your wife and kids on the air.

>Does a gay ham feel more comfortable discussing antenna theory
>or new digital modes with another gay ham? Why the club? What purpose
>does it serve other than to tell the world hey I'm a ham radio operator
>and I'm gay!

I don't know, but I think I can name one heterosexual husband and father
who is more comfortable discussing amature radio with other heterosexuals.

>
>I guess the long and the short of it is, whether or not LAMBDA is an
>ARRL affiliated club doesn't mean a hill of beans to me. How about you?

Well, let's see. I'm not an ARRL affiliated amature, though I've
considered it many times. And I'm sure it wouldn't signify that much
if I were. And if you told me that you are a member of an ARRL
affiliated club I couldn't say much more then "That's nice". So
I guess you're right, it doesn't matter that LAMBDA is an
ARRL affiliated club.

Mike
In 8 Land you will have to upgrade to Advanced or better to change your call. - recent vanity rulings withstanding. Your 2X3 call is a Group D call originally set up for the Novice group. The Group C calls (N8xxx) were set up for General/Tech/Tech+. These Group C calls in 8 land (and most other regions) are exhausted. Soooo the FCC issues the next lower Group. Bottom line..In your region 8, all call sign issues or changes for General and below will be KC8Cxx.

Unwanted Advise: Go for thirteen. I am a Tech+, but have not broken the 13 WPM barrier (probably my own lack of consistant effort laziness)

>Heck, we even have an entire newsgroup devoted to antennas (rec.radio.ama-
>teur.antenna). Antennas are magic!

i've built a few. they ARE fun to play around with. but i have the
sneaking suspicion that building an antenna is a ham's way of doing
some little project that is a little easier than homebrewing equipment.
that's ok, but i hate to see so many people intimidated by the newer
technologies. you still can build your own transceiver but i don't
think many people do.

How cheap does it have to get?

You can go to SHF Parts
7102 W. 500 S.
La Porte IN 46350

and buy Gunn tranceivers for the 2 MB/s datalink project
(see Packet: Speed, More Speed, and Applications)

for $25 each for the used, tested units and $48 for brand
new ones. At hamfests, I've seen them as cheap as $5 each.

If you are really on a budget, consider asking around the
outfits that repair/service automatic door openers and intrusion
alarms. Often, they have broken electronics with perfectly
functioning Gunn transceivers--free for the asking. I have a
friend who did this and even some 24 GHz units!

The cheapest new dishes available are the 18 inch DSS offset
feed dishes. They will set you back $13+shipping/handling.
See the Dec 1995 QEX article by Paul Wade on how to use them
on X band.

Anyone know of a source of cheap 100MB/s modems and
digital hardware to support it?

On further reflection, there is an ADDITIONAL problem in logic
if one wishes to accept the above sentence, AS IT STANDS ALONE,
of your original two-sentence statement. If the technology, or
mode, is NOT obsolete, it is quite logical to expect required
testing to ensure knowledge! Only when the technology, or mode,
becomes obsolete (not in use) would one expect government to
drop testing standards! What's going on here, Bob?

About 10yrs ago Heil (who I believe is Heil of Heil microphones)
explored the whole thing and found that some boards could be
done and some couldn't. He bought a whole truckload of boards
that could be easily converted and sold the bits to change it
over as a kit at a very reasonable cost. I have no idea how
to get onto the guy, except that he advertises in ham magazines
occassionally. He might be in Ohio. In general you cannot
easily convert just any CB. Do you know that the Radio Shack
and Uniden 10m rigs are avail 2nd hand for about what it would
cost to convert a CB?

>Paul J. Piercey (VO1HE)

Yes Paul, its true. You can NOT get AIDS from a blood transfusion. You can however get HIV, which is the virus that may, or may NOT, cause AIDS.

The people you speak of, got HIV from the transfusions...not AIDS.

This is common medical fact, and off-topic for this group, so lets hope this ends it.

Take care.

Found a DXbase At:

http://www.ve7tcp.ampr.org/Software/dxbase/

Here is a handy multi-search engine as well. Lets u choose between 16
different searchers.

http://www.stpt.com/cgi-bin/searcher

Hope this helps

From Tad Cook, KT7H
Seattle, WA April 26, 1996
To all radio amateurs

SB PROP ARL ARLP017
ARLP017 Propagation de KT7H

Solar activity was up a little last week, but geomagnetic activity remained high also. The average Boulder A index was 15.9, the previous week was 15.4, and it was 5.7 the week before that. The A index is a daily indication of geomagnetic field stability, and values below ten generally mean that the field is stable and absorption is low.

Average sunspot numbers were up by over 12 points this week.

We are at or near the solar activity minimum. 30 meters is probably the best daytime band for long distance communications, with 20 meters a fair bet when solar flux rises slightly. Solar flux is expected to remain at or below 70 until after the first week of May. It should peak around the mid-seventies around May 11, and then fall below 70 again after May 18. The geomagnetic field should stay stable between April 29 and May 8, and then expected disturbances center around May 11, 14 and 15.

Sunspot Numbers for April 18 through 24 were 29, 26, 28, 18, 15, 12 and 11, with a mean of 19.9. 10.7 cm flux was 70.1, 70.5, 71.5, 74, 72.4, 71.1 and 68.6, with a mean of 71.2.

Not the reason for the code restriction. The code is necessary for Ham Radio operators to know because of Beacon Identifiers on HF, I believe. Don't quote me on this, but most commercial stations do still use morse beacons as identifiers. As well as for wx reports, etc, and this fact caused the ITU to make a morse requirement for HF the world round, at least where ITU members are concerned. So it's not an FCC decision, but an ITU decision to keep the code requirement. Amatuer status is a way to learn to actually provide a useful skill to people desiring to be professionals as well. What good would amateur radio do if the people training were to leave out some of the HF reqs to get on radio and just talk ? In the Ham world, you're not only supposed to know how to turn on the radio, and use the kewl lingo, but how to repair it if it goes down, how to fix or reconstruct an antenna, and what to do in an emergency situation. If you don't want to learn code, then stay on 30 and up, where you can still do all the things that radio will let you do, without having your signal leave the borders of your own country and encircle the globe. Because believe it or not, there's still some intrinsic dangers with the use of high powered radiators, and there's alot more to this hobby then just making idle chit chat.

BTW, I am a tech plus operator, even though I know the code at 10+ WPM, and not because I am too lazy, but vhf-uhf, packet, sat work, simplex, amprnet tcpip, and alot of other things keep me busy enough to enjoy what I'm doing enough not to want to upgrade just yet. I have a 10 Meter rig, and have 40+ world band contacts on it, some with a mag mount and 25 watts, and yes, some CW. I figure I'll get my general round about the time HF really starts to open up again, and yes, I do believe I'll have no problems passing the code test when it does. 73.

Simply send it to "FCC, Gettysburg, PA" and I assure you it WILL get there!
But if you're really concerned, their full address for license renewals is:
Federal Communications Commission
1270 Fairfield Rd
Gettysburg, PA 17325

I just modified my license (change of address and class) and turnaround time
(from day of mailing to day it showed up on the FCC database - today!) is 11
calendar days.

>don't want to KISS it I just want to connect...." Yea we all know you
>understand CODE.....

No, but a practical knowledge test on networking wouldn't be out of the
question, now, would it ? The proper operation of a packet station,(which
is required) the installation of a tnc and software, and general computer
knowledge wouldn't be too much to ask, now would it ? You need to know
baud reqs, bw, and other things in order to obtain your amateur ticket to
use packet on 30+ bands, so why not make the reqs a little steeper for
that. Don't you feel that you had to learn anything in order to operate
your own packet station ? Does that separate you from the crowd on inet,
because you have or can obtain special privs other people don't have, like
use of amprnet ? Have you ever run a tcpip node hookup to the inet, and
retransmitted amateur radio sigs to a commercial carrier, and vica-versa?
That's a very special priveledge, something no other class of computer
operators have, outside of commercial. And lastly, did rs-232 just float
up there on it's own, or did someone have to pay for it, and then build
it, and launch it, and make trajectory calculations for it, and write
compter tracking software, and packet progs, just so us tech and tech+
types could hook up our computers to it, and use their equipment, and it's
limited resources ? I don't know about anyone else, but I can't name any
other hobby in existence that would do this for us, especially when
there's no real money involved. Have a good day. 73.

You can get HIV from a blood transfusion. HIV is the virus which causes AIDS. Therefore, simple logic (which obviously escapes Mr. Greenhalgh. No surprise here!) is that you CAN develop AIDS as the result of a blood transfusion.

Come on, Chris! Even YOU aren't that stupid!

If I am correct, about the IRC this person is speaking about, IRC is Intern=
et Relay Chat, which =

is one of those instant chat things, over the internet. I've never though=
it was great. I've tried =

it once, then gave it up. I don't do date lines either. I like the qualit=
y of writing messages like I =

am now. =

> >Where's the fun in radio, now that so many people use computers to do
> >the code translation for them?

Yes, but some people like the accelleration of letting technology and brain=
s (that's what =

computers are) do the work of transmitting information. Different views. =
Simple. =

> Part of the enjoyment of the hobby is learning of new kinds of skills.
> I would guess that the novelty of doing keyboard CW QSOs will wear off
> for many of them soon, and they'll want to learn something new, like
> maybe CW without the keyboard. Or ATV. Or antenna design. Or...

I agree. I think that if CW became a sideline, I'd probably learn it becau=
se it has great =

potential in the amateur radio world. I own a HT from Kenwood (TH-79A) whi=
ch has all =

kinds of bells and whistles. I expect to use all of them someday, but that=
's what I expect from =

VHF/UHF. I expect even more from satellite. The next step up is land line=
=2E =

However, in HF, I don't want the technology to get so good that within the =
dip of the sun =

charts, we get noiseless transmission on all bands. It takes away the chal=
lenge of finding the =

right time of day, right conditions, right equipment, right attempt. That'=
s what makes the =

hobby. What hobby is telephone? I will use keyboard to learn, but as my e=
ar gets trained, I =

will use a key. Back to basics training. That's great stuff. Truly appli=
cable in a time of crisis. =

Who carries a keyboard when a flood or a tornado strikes? Two fo them in O=
ntario this =

past week alone.

> >I long for the days of 15 meter nights and 80 meter days; when a
> >Technician was unusual; when a faint signal might just mean Lithuania

6149. HELP!! Mods for alinco 6 MTR

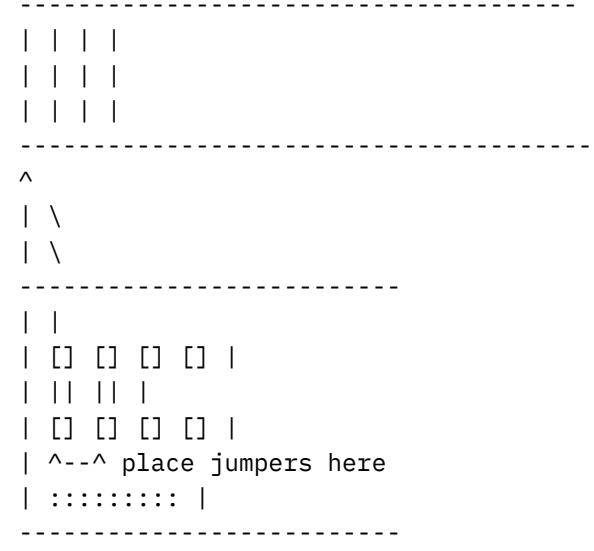
Newsgroup: rec.radio.amateur.misc
Date: 1996-04-26 00:00:00 UTC
From: narc@pacifier.com
Message-ID: <4lrkhp$6dh@news.pacifier.com>
Source record: 226822

Help, I have recieved a couple mods for the 6 mtr rig but they are not specific enought to be sure what they are refering to as far as the location of the solder pads. There should be a reference part number or bottom left or some kind of aid.... thanks
jeff
narc@pacifier.com

Here is an example.....

TX and RX MOD DR-M06T Alinco
RX 32-87Mhz TX 42-70Mhz
1. Remove top and bottom covers.
2. Remove the main dial from the case
3. Remove the front plastic case.
4. Unscrew the 3 screws on the control unit and remove.
5. Locate jumper locations (see diagram)
6. Place solder on the left 2 locations.
7. Reassemble the radio.
8. Reset the Microprocessor
(press and hold [FUNC] and turn on)

Control unit backside



Expanded RX only Mod RX 40-60 TX 50-54
1. Press and hold the [CALL] key and turn radio on
Thats it.

Channel display MOD
1. Press and hold the [TOT] key and turn radio on.
the radio will no display channel numbers.

Being a former Police Officer, I can tell you that each police
department, may have different codes. Some what the same in the same
state. If you have a friend that is a police officer, he should make
you a copy or ask a dispatcher, in Indiana we in general would pass
that on to the public, since anything transmitted is public knowledge.

With this post Chris has reached a new level of stupidity. The only possible hair to split is HIV vs AIDS. Do you even know what these acronyms mean Chris? As an exercise for the student why don't you look them up.

You know Chris in your vitriolic hate campaign against Drew you have lost all sense of reason you might consider professional help. For your continued good health I would suggest you learn a bit more about HIV and AIDS. Then you might know why those of us in emergency medicine glove up and wear masks and glasses these days. We apparently know something that you do not.

Before making a hate filled reply to me or Drew I suggest you learn a bit more about this subject. It is heard to imagine you making a bigger fool out of yourself than you already have but anything is possible.

Since this has nothing to do with Amateur Radio I suggest follow up be posted to alt.stupid.prejudice

Jerry

It is up to the VE team giving the session as to whether they want to use the standard test or a multiple
choice test. Our group debated this for quite a while. (Questions like "group so-an-so one town over is using
the multiple choice test, why aren't you?)

I found it interesting how many people failed the test miserably on the questions, but passed with 1 minute
solid copy.

This has nothing to do with hatred, but medical fact my friend. Which, by the way, I challenge you to prove otherwise.

>Perhaps he
>would like to explain to Arthur Ashe's family that it is all a big
>misunderstanding Arthur's tragic death and all. Wasn't caused byt that
>transfusion.

I never wrote that Jerry. I rebuttled to a (wrong) post that claimed someone could catch AIDS from a blood transfusion...this is untrue.

AIDS is not a virus, hence, my medical definition, can NOT be transfered via blood contact (transfusion).

Now the HIV virus...thats a different story...it CAN in fact be passed via blood contact, and THAT is what can, or can not, cause AIDS in humans.

>It is a wonder that anyone associated with and institution of higher
>learning could be so ignorant.

Seems now that in fact YOU are the ignorant one my friend. :)

>Kind of makes you wonder what a
>Electronic Tech II can do. Mr. Greenhalgh it would serve you well to
>become a bit better informed your ignorance could cost you dearly.

Well Im not going to stoop to some 4th grade level, and start hurling names and nit-picking spelling because I cant argue a point, but who in fact really looks like a "moron" now Jerry?

Because IRC is a dependant system. I can't say to you, "Look, you wanted to be a ham, so do some radio stuff", but I can say that IRC doesn't talk to the Mir platform on packet, or the Space shuttle, or do moonbounce, or aurora. Inet doesn't do qrp cw work, or DX to countries and places where there is no internet. And ham radio does do Inet, with amprnet, and in alot of places, there's connections to people worldwide using radio to interface with the internet. I don't know, but i get a tinge of excitement about thinking that we put this thing together, and are interfacing with the world on it. It's not the what we did, but the how we did it that makes it worth our while.

>Part of the enjoyment of the hobby is learning of new kinds of skills.

>>So, fellow amateurs, what's out there that ain't in here? And is it
>>really worth such a big chunk of my income?

What's in here that isn't out there is more like it. It's not the fact that you talked to someone in Lithuania. It's the fact that with Ham radio, you could be your own provider, your own router, and aren't dependant on any other equipment than your own. The guy on the other end is responsible for his rig, so you're covered there. With Ham radio, you're dependant on very little except a power source, and a tree from which to sling a dipole, plus the rig. Not to say that inet doesn't make everything easy, but what if something should happen, and the system should fail ? How do we talk to Europe, pass traffic, etc, when there are no sats, no phones, no inet ? Do we send msgs by mail ? irregardless of conditions, irregardless of situation, amateur radio is there, and serves a vital purpose. Not to mention the fact that it's fun, and educational. Most of the technology we have today wouldn't have been developed in the first place if there hadn't been some ham sitting out there saying what if we did this.

Plus, what about mobile communications ? Name a mobile service that isn't cell dependant. When Andrew struck South Fla, we were left without comm to the whole south end of the city, and what did we have ? Ham radio, that's what. When the main radio on the shuttle experienced a failure, what was the backup ? Ham radio again. When pilots were locked up in North VietNam without a means to talk to each other, how did they communicate ? Morse code, that's how. When ships are observing radio silence on the high seas how do they communicate ? Morse code again.

It all has a purpose, and the weird thing is, we never can appreciate the value of what we learn until we find oursleves in a situation when we really need it. Alot of times, it's life threatening, and the need to communicate far outweighs the value of a chat on irc. 73, ttyl.

6164. Re: Public Service IDing?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-26 00:00:00 UTC
From: hideg.1@nd.edu
Message-ID: <hideg.1-2604961557050001@webtest.cc.nd.edu>
Source record: 226837
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I don't know why there is such a big deal about tactical call signs.

Calling "check point two" is exactly the same as if one said "hey Ron" on the radio. You still have to ID with your amateur call sign as proscribed by part 97.

The confusion, I think, lies in referring to them as call signs at all.

My understanding is that i days past, stations were required to ID themselves and the station they were calling at the beginning of the communication (in addition to other ID requirements). This has been dropped in one of the many rewrites of part 97.

So, now, legally, I can get on the air and say "Hey Ron" and start a conversation. I (and Ron) only have to ID (only our own stations) every 10 minutes and at the end of the conversation. The same holds true with "check point two".

When I was NCS tactical nets like this, I IDed more frequently than necessary, primarily to inform passers-by on the frequency that a net was in progress. I left it to each station to ID themselves.

(And don't say "for ID" when you identify. I mean, WHY ELSE are you identifying but for identification purposes? I had a conversation a while ago with a fellow who's callsign was something like KB9xxx4ID...)

>
>What significance does single side-band have to furthering communications
>technology in 1996? Or FM for that matter?

Well, single sideband technique is ideal for M-ary encodings, and FM
is just another word for FSK, which still has some things to offer
that are superior to OOK. Neither does much in itself to further
communications technology, but they're still useful to enable such
technological advances. And of course, neither requires passing a
separate pass/fail speed test in order to utilize other methods of
communications which *are* at the SOTA.

Note too that while OOK is primitive compared to other modulation
techniques, it can be improved by using encodings other than Morse.
Convolution encoders, Viterbi decoding, Reed-Solomon FEC, etc, can
all be applied to OOK, and offer substantial improvements over Morse.
They work even better, of course, if a modulation superior to OOK is
utilized.

>really worth such a big chunk of my income?

Emmett, new radios are cheaper today than they ever have been (factoring in inflation), and offer more features than ever before. However, you don't need a new radio to do amateur radio. Your old one still works, and if you no longer like it, other older radios are available at very low cost to replace it. Or you can still build your own, you know. There's no reason you can't get on the air for less money than a web cruising PC costs. Cost is a red herring when comparing amateur radio and the internet.

The thing that makes amateur radio interesting is that you are in control of the signal transport, not some faceless corporate provider of network services. You can explore that transport at levels which would get you thrown in jail as a hacker if you tried it on the provider corporation's network. Amateur radio is an experimental service, and what you're experimenting with is the raw fabric of Nature, probing it with electromagnetic waves in order to spoof it into giving you a "free" call. It's better than anything a blue boxer can do. You get to choose the protocol, you get to choose the path, you get to hack the interfaces, and all with the blessing of the government, rather than being pursued by the phone police for your phreaking.

If you're just a *user*, then IRC, or CB, or the telephone is what
you need. But if you're more interested in the why and how, with
tinkering with the guts rather than just in using the service,
then amateur radio is where you belong.

>Can you help me?
>Thanks in advance.
>IW3HNS WALTER <narda@sunrise.it>

You'll likely get more response over on the rec.radio.amateur.space
newsgroup, but first tell us which satellites you want to work. Tell
us whether you want to do digital or analog, voice or data, and then
we can help you more efficiently. There are LEO and high orbit satellites,
digital and analog satellites, FM, SSB, CW, FSK, and PSK operating modes,
and different setups are needed to operate different ones.

The easiest satellite is MIR, and you only need a 2m FM rig to talk
to the cosmonauts, and an ordinary TNC to access their BBS. Other
easysats are AO-27 which requires a FM dualbander, or the Russian
Mode A birds which require a 2m transmitter and a HF receiver. Or
there are the pacsats, which require 2m and 70cm radios and modems.
All of these can be worked with simple antennas and relatively
low power. Then there are the high orbit satellites which require
tracking antennas and a touch more power to work efficiently. With
them you can use SSB voice, CW, SSTV, or one of the more efficient
digital modes. The advantage of the high orbit satellites is a much
larger footprint, meaning you can have realtime QSOs with people
over nearly a hemisphere. The LEOs limit realtime QSOs to a much
smaller area due to their reduced footprint, though store and forward
techniques on the pacsats still give you global messaging in non-realtime.

So what is it you want to do?

>To be usable, digital modes require more bandwidth for higher transfer
>speeds.

Surprisingly little more, and considering the throughput improvement, effectively less. For example, Clover gives you 750 bps in a 500 Hz channel. That's equivalent to a 1125 WPM Morse signal, and *that* would occupy 4.6875 kHz (Bn=WPM*K/1.2).

>How much high-speed digital traffic can HF support?

Obviously quite a bit more than can be passed on CW in the same bandwidth.

>VHF and above is better suited for digital-oriented traffic.

Not necessarily. While higher baud can be supported at VHF+, the line of sight limitations mean that to span the same distance many additional relay nodes are required. And each relay node effectively halves the baud and doubles the latency. So it doesn't take very many relay hops before using HF is more efficient.

For the *local area*, VHF+ is superior. But once the message must leave the local area, HF is still the better choice. (Of course there's the satellite option too, and it is often a viable alternative to HF.) If all you need is to cruise the local MAN, then VHF+ serves fine, but if you want range comparable to the global internet, you need HF.

Or with even less power given a good FEC digital protocol.

>2) There are a lot of interesting folks out there who do not have
> access to the internet and will not for some time to come.

True, though the number who *do* have internet access already is
10 times the number who have amateur radio licenses worldwide.
And that number seems to double every time you turn around. If
you're just a *user*, then the net already offers you more than
amateur radio.

>3) There is the initial comraderie that comes from using Morse to
> communicate. You find this among sailors (wind powered) too.
> I can walk into the radio club in Hong Kong, introduce myself,
> and meet some folks. Actually I can do this almost anywhere in

Wrong comparison, try walking into a computer *club* meeting
instead. Anywhere in the world, you'll find someone willing
to curse Bill Gates with you.

>Now for a pro Morse tirade :-)
>
>It's pretty obvious from reading this group that Morse isn't for
>everyone. Just like Soccer, Rugby, Sailing, Flying, etc. It takes
>some interest and effort.

It takes more interest than effort. And it is that lack of interest
that has Morse testing proponents desperate to maintain a government
testing mandate. If interest were high, there'd be no need for a mandate,
IE if people *wanted* to use Morse, they'd learn it, mandate or no mandate.

>However, it is one of the things that makes amateur radio special.

Like parading around in tin armor makes the SCA special?

>I like to look at it this way. Having no particular interest in
>modulation other than Morse, why should someone have to learn about
>SSB to obtain an amateur license???

They *don't*. You can miss every SSB related question on every exam through Extra and still get your license. If that were true for Morse as well, this endless debate would be moot.

>Linda can copy Morse at 20WPM + but has absolutely no aptitude for
>math and hence can't get through the written exam. Why not remove the
>written requirements for Ham radio. The equipment is virtually fool proof
>these days. She has no need to know how to tune a tube type final amp.

In the first place, less than 20% of the written exam requires any math skills, and of that remaining 20%, most require nothing more complex than simple arithmetic and simple formula manipulation. It's not like the exam requires you to derive Maxwell's Equations or anything. You can miss 30% of the written questions and still pass, so even if Linda is *totally* innumerate, she can still pass.

Now there *are* some things an amateur has to know to satisfy the government's concern that they operate safely and without causing harm to others. Simple things. Things like the bandwidth of a signal. Things like what is overmodulation and how to recognize and correct it. Things like the rules and regulations of Part 97, IE the rules of the road. These things every amateur must know. Knowing how to tune a tube final isn't necessary knowledge, unless you have a tube final, but you darn sure have to know how to recognize non-linear operation regardless of the type of final used.

>Now for my opinion.
>If amateur radio does not require some extra effort giving rise to
>a sense of accomplishment when one has acquired a license, knows Morse,
>knows how radio works, understands the various digital modes and
>modulation schemes, then it's nothing.

Nonsense. Amateur radio's value lies in what it enables you to *do*, every day. It's value is not fixed by what you had to do *once* sometime in the past. That might be true for a dusty athletic trophy on a mantel, but it isn't true of an amateur license. This effort business is just a hair shirt religious argument, which has no place in a secular licensing system.

Unfortunately, according to the Supremes we do have such a contract,
and it is enforced by the IRS, backed by the full weight of the Federal
government's armed might. Now we can renounce the contract by renouncing
our citizenship, as some have done, and adopt a flag of convienence instead,
but then we lose the benefit of the social contract, including giving up
the right to be in this country for more than 120 days a year.

>way to handle this? Write arrl,fcc, or ignore it?
> Jim & Donna

You now hear "hell and damn" on broadcast TV. Perhaps in 1950s America they might have been considered unacceptable, but community standards change (and the Supremes say community standards rule). So I'd have to say that such language is now considered expressive speech.

That may not make such expressions any less foul or offensive in *your* ears, but that's a point of personal prejudice solvable by the channel selector or the on/off switch. To be profane, language has to cross some religious taboo, but whose religion? To those to whom hell is but a colorful expression, and not a literal burning pit, use of the word is not profane. Our government is not allowed by the Constitution to adopt a State religion, so profanity is again a matter of personal prejudice.

Obscenity is a different matter. The Supremes say they can't precisely define it, but that they know it when they hear it. That's rather unsatisfactorily vague, so they've tried to limit it to lurid sexual references and scatological remarks. Such utterances (if persistent) might warrant a call of the FCC, though they'll likely ignore it. They're a bit busy running spectrum auctions.

Actually, just sending it to FCC, Gettysburg, PA will get it there.
The Gettysburg post office *is* familiar with the FCC. They handle
a few tons of mail for it each day.

Indiana Balloon Launch for April 27, 1996-Windtrax 96

Windtrax 96, a continuing series of helium balloon flights for fun and education will be lifting off (weather permitting) on Saturday, April 27 between 12 & 1300 GMT or 7 & 8 am CDT. On board will be the following:

ATV: On 439.250 Mhz showing views from the balloon plus a color video Id'er. The call will be KT9V.

Packet GPS: Giving telemetry and balloon information as well as lat & lon and altitude with the call of WB9IHS.

Cross Band Repeater: Input on 144.300 with outputs on 444.850 and 52.525 Mhz using a re-crystalled and tweaked baby monitor transmitter. Call on the repeater will be W9DUU.

A HF net will be held on 3871 Khz + or - to provide status and reports of reception of the balloon.

The balloon is expected to reach an altitude of 100,000 feet and have a range of 400 miles. All antennas on the balloon will be vertical in polarity. All amateurs are encouaged to join in on the fun and participate in this flight.

On one extreme, you could say that any utterance using "hell" or "damn"
is offensive. On another, some would say that you're lucky if that's
the extent of the profanity you hear.

My take is that it depends on context. If you hear someone say "damn, I
just missed out on buying that rig by five minutes" or "aw, hell, take the
13 wpm test first, you just might pass" - I'd say that was so mild as to
be inconsequential. The speaker isn't using the words in a context to
shock or offend.

If, on the other hand, the language used is enough to make you wince
(listen to CB for a short while for an example), then clearly it's
offensive.

>If it is, what should be done? what is the proper
>way to handle this? Write arrl,fcc, or ignore it?

The ARRL and the FCC in all likelihood will do nothing; it is not an important
enough matter to them.

Hot news just in from the FCC. In an April 25th press release,
the FCC says it may proposed to allow higher powered
unlicensed devices in the shared 5.7 GHz Amateur band. You can
read more about it at Ham Radio Online - its free! And no ads either!

So far in April we've published these featured stories:

FCC May Allow Higher Power to Unlicensed Devices
FCC Eliminates Morse Code For Cargo Ships

Hi Robin!

If you had a full "US license" rather than a reciprocal permit, you wouldn't need a Canadian reciprocal permit. However ...

There is a main Department of Communications licensing office in each Canadian Province. You get your permit from there on production of your UK documents (current licence with validation document). There is no charge and you can apply in person. The letter of authority will be issued over the counter. If you tell me which Province you're going to, I'll tell you the address of the nearest office.

6193. County Hunters - All 100 North Carolina Counties in 72 hours

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-26 00:00:00 UTC
From: kq4lo@rbdc.rbdc.com
Message-ID: <31804750.1690084790@rbdc.rbdc.com>
Source record: 226870

ALL 100 NORTH CAROLINA COUNTIES IN 72 HOURS!

(Winston-Salem, NC)- The Forsyth Amateur Radio Club, Inc., a non-profit organization made up of amateur radio operators from around the Piedmont, has announced a fund raising campaign geared towards replacing and upgrading its radio tower and antennas located at the Red Cross Chapter House on Coliseum Drive in Winston-Salem. Called the Great W4NC County Chase, the fund raiser will take place starting Friday, April 26, 1996 at 6pm and finish at 6pm on Monday, April 29. Six members of the W4NC Contest team, a group of amateur radio operators within the club who participate in several world wide radio contests each year, will board an RV at the Red Cross and attempt to drive through all 100 counties of the state of North Carolina in 72 hours. While on the road, they will contact amateur radio
stations around the world with the radio gear which will be on board. The driving and the radio operation will be continuous throughout the 72 hour period, as "County Hunters" from around the world will seek a contact while the vehicle moves from county to county. Other members of the club will be manning the W4NC club station at the Red Cross to keep up with the vehicle's position.

Members of the Forsyth Amateur Radio club will be soliciting pledges from friends, family and work colleagues in the amount of 1 cent per mile. Since the trip will be roughly 2200 miles in length, each 1 cent pledge will be considered a $22.00 donation to our tower replacement effort. (Because of our non-profit status, your pledge may be considered as a donation for tax purposes. Consult your financial advisor for
more information.)

The Forsyth Amateur Radio Club recently celebrated its 65th anniversary this past December. Our hobby, besides being a great way to
learn about the art of radio and meet new people, exists to provide communication to the community in times of disaster and need. These times include Hurricanes Andrew and Hugo; The Great May 5th Storm of 1989; and as recently as the Blizzard of '96 and the following ice storm. Ham operators aid the Red Cross, local Emergency Management officials, and local community as a whole by providing communication during disasters, aid in staffing shelters, assist in transmitting messages to affected parties, and while in their vehicles, can
pass condition reports to the necessary agencies. This fund raiser is to assure that our services can be carried out the most efficient way

possible by keeping our equipment and antennas up-to-date while making necessary replacements and repairs to our existing facilities.

Here is the schedule which we will be keeping with the tracking team:

Top of every hour

7.260Mhz(and down)during daylight hours
3.860Mhz(and down)during night time hours

14.336 mobile net-As propogation allows
Tarheel Emergency Net- 3.923Mhz 7:30pm(2330Z)
Breakfast Club Net- 3.973Mhz 5:00am
3905 Century Club Net- 3.905Mhz, 10:00pm(0200Z)

Other HF freqs. include "the sixties"...
3.860Mhz
7.260Mhz
14.260Mhz AS PROPOGATION ALLOWS
21.360Mhz
28.360Mhz

Emmett,
Some of us just plain like radio. We still like listening to a weak signal sneaking in through the noise, or watching the thrill on my kids faces as they listen to a signal coming from a Russian amateur satellite. I still marvel at talking across the country on 1 watt of RF - or working into a UHF repeater 120 miles away, on a 1 watt HT - and on the wrong side of a mountain too boot - all because of freaky propagation. I like learning the vagaries of propagation. After 23 years (I'm 37 now - got started young!) I still learn new things about radio telecommunications all the time.

If you just want to talk to someone, the telephone works pretty good nowadays. But I don't think too many hams became hams because they wanted to avoid the telephone. Hams join ham radio for many reasons - from social contact on the local repeater, the sense of community, to provide emergency or public service to their community, to tinker and build electronic items, because radio still holds a magical quality, because - well, because its fun!

Amateur radio offers a lot. That's why we put out Ham Radio Online for free. No advertising. We fund it ourselves. Ham Radio is fun. Come take a look, see if some of the stories can't rekindle some of your interest. That's the whole reason we put out H R Online.

Alternately, try calling the nearest field office of the FCC.
Sometimes you can get lucky, and find a ham there that's
knowledgeable about the local scene.

Date: 25 Apr 1996 08:54:35 -0600
From: dfinley@chaos.aoc.nrao.EDU (Dave Finley)
Subject: Farnsworth vs Koch

There is no conflict between the two. Farnsworth is simply sending
the characters at a higher speed than the overall sending speed,
e.g., 18 wpm characters sent with enough space between them to make
an overall sending speed of 5 wpm, as the ARRL VE exams are done.

Read the full article on Koch at:

http://hawk.nmt.edu/~bateman/sara/finley.morse.html

The article you cite is only the details about using SuperMorse
for implementing the Koch method.

I recommend doing your Koch drills and incorporating the Farnsworth
spacing -- 20 wpm characters spaced out to an overall sending speed
of 15 wpm.

From: David Hough <dave@llondel.demon.co.uk>
Subject: GB2RS News 28th April 1996

Good morning. It's Sunday the 28th of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Next Saturday, the 4th of May, the Radio Society of Great Britain invites members and non-members to visit its Headquarters at Potters Bar, just off the M25 in Hertfordshire. The popular Annual Open Day includes guided tours of the HQ offices, the National Amateur Radio Museum and Library, the GB3RS shack, traders, staff, committees, the RA and SSL. Refreshments will be available. A map can be found in the RSGB Call Book, or is obtainable by calling the RadCom office on 01707 659015, or faxing 01707 649503. Non-members of the Society are especially welcome to come along and see what the RSGB does for them.

The rules for this year's QRP Fun Run, which takes place in conjunction with the Yeovil QRP Convention, appeared on page 75 of April's RadCom. Please note the following additional details about contacts. Stations may be worked once only on each band during the event but Fun Run Bonus Stations - all operating each evening randomly for one hour on each band - may be worked once each evening per band. The event takes place from the 7th to the 10th of May. For further details contact Peter Burridge, G3CQR, on 01935 813054.

The sporadic-E season got off to a lively start last Sunday, the 21st of April, reports Martin Harrison, G3USF, chairman of the RSGB Propagation Studies Committee. Between approximately 1100 and 1430 UTC, 6 metre operators in most parts of the UK were able to work into Italy, former Yugoslavia and the Czech Republic with S9 reports. Around these times, many contacts with the same areas and with Austria were also made on 10m. However, it is likely to be several weeks before such openings become almost daily occurrences.

Also from G3USF, this time wearing his IARU Region 1 Beacon Co-ordinator hat, is news that another new beacon has joined the International Beacon Project worldwide network. 4X6TU in Tel Aviv is now operational on 14100, 18110, 21150, 24930 and 28200kHz with stepped powers of up to 100 watts to a vertical antenna. This is on a three minute cycle with 10 second transmissions on each frequency in turn. It joins ZS6DN, LU4AA and YV5B while JA2IGY is expected on air soon. The network, once it is

completed next year, will comprise 17 five band beacons synchronised by satellite control.

An RSGB Regional Open Meeting has been arranged by Fred Stewart, G0CSF, Council Member for Zone C, which covers the south-east of England and East Anglia. The meeting will take place on Sunday, the 26th of May, at Rivenhall Village Hall, Church Road, Rivenhall, Witham, Essex. RSGB President Peter Sheppard, G4EJP, is due to attend, along with Executive Vice President Ian Kyle, GI8AYZ. For further details contact G0CSF on 01732 780721.

The following statement has been issued by the Council of the RSGB:

Council wishes to inform members of the Society that G Reilly-Cooper, G0MAM, no longer acts as the RSGB Emergency Communications Officer. Council wishes to place on record the Society's appreciation of Mr Reilly-Cooper's past efforts in this field of amateur activity.

The vacancy for the position of RSGB Emergency Communications Officer will be advertised in the Society's journal and all applications will be treated on their merits.

Until such time as an appointment is made, queries relating to talk-through permits should go to the Licensing Advisory Committee Chairman I D Suart, GM4AUP, whose address is correctly shown in the current RSGB Call Book.

Any other enquiry relating to Raynet matters should be directed to the Membership Liaison Committee via the Chairman, I J Kyle, GI8AYZ, at his home address also shown correctly in the Call Book.

Council reiterates its wholehearted commitment to the role of Raynet groups in training for and providing emergency communications and will, to the best of its ability, continue to fully support all groups wishing to be affiliated to the Society.

To this end, the Radio Society of Great Britain proposes to host an open meeting later this year in order that all who have an interest in the field of emergency communications may make a contribution to the formulation of a policy for the future.

The venue and date of this meeting will be published well in advance.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

> Alan

There isn't any harm in adding additional grounding electrodes or systems.
The harmful situation is having independent grounds connected to different
points in the house. What you want to avoid are ground loops through the
house wiring.

Ideally, all wiring should enter and leave the house at one point, and all
outside grounds should connect at that same point. What this does is
prevent ground loops and improve the ground connection.

{Obviously bigoted tantrum clipped}

Now, let's just review what it takes to be an affiliated club.

As I recall, it takes 51 percent of your regular members being ARRL
members, and the group needs to file an application stating their
desire to be affiliated.

That's about it.

Pretty much open, I'd say.

I view it as Without Regard to Things That Don't Matter.

I like it like that.

Why don't you?

Subject: Public Service IDing?

Once upon a time, Matthew Delaney wrote 13 lines on the subject:
Public Service IDing?; here's some of it:

>I've heard public service communications taking place, and they've IDed
>by saying such things as "check point 1", "finish line", etc... Is it
>legal to use this instead of their callsigns?

Yes and no.

Yes it's legal to use locations, etc. No, it's not legal to use
them exclusively, *in*place*of* assigned Amateur Radio callsigns.

Each station must identify according to FCC rules in the US at ten
minute intervals, and at the end of the transmission or series of
transmissions. This regularly equates to an ID every ten minutes,

and signing as the last thing the op says in an exchange. Some operations have the Net Control Station (NCS) run a timer and call a roll every ten minutes, thus relieving the individual operators of the need to watch the time for the ten-minute rule.

Use the so-called tactical callsigns (checkpoint two, etc) to help everyone on the net understand what's happening. If I need to comm with the op at the first-aid tent, I couldn't care less what the callsign of the op there happens to be this hour (and it will probably change from one hour to the next). All I need to know is that it's the first aid tent. I call the first aid tent. First aid answers. We comm. When the exchange is over, each says their own callsign. All is well, all is legal.

http://ftp.barc.org:8080/pub/hamradio/arrl/infoserv/rib/part97.txt has the entire rule set. Here is the pertinent excerpt.

Quoted from the referenced URL--
S 97.119 Station identification.
(a) Each amateur station, except a space station or telecommand station, must transmit its assigned call sign on its transmitting channel at the end of each communication, and at least every ten minutes during a communication, for the purpose of clearly making the source of the transmissions from the station known to those receiving the transmissions.
No station may transmit unidentified communications or signals, or transmit as the station call sign, any call sign not authorized to the station.
End quote

Note the last sentence about "not authorized to the station." The immediately preceding phrase "as the station callsign" makes clear that as long as the additional ident (checkpoint 99) is not used *as* the station's callsign (but rather *in*addition*to the callsign) there is no prohibition.

Use the location identifier (tactical callsign) as often as necessary to provide the desired support. Use your legitimate Amateur Radio callsign every ten minutes and at the end of the exchange to stay legal.

Enjoy your activity!

Yep, that's almost exactly what I've had in mind for some time. In the long
run, though, we need to get away from the simple-minded easily-memorized
question pool format and come up with some sort of dynamic test that can be
custom-generated on the spot. If we're gonna drag the amateur radio service
into the 90s, why keep a 1950s test format? If it takes rule changes, so be
it.

How cheap does it have to get?

You can go to SHF Parts
7102 W. 500 S.
La Porte IN 46350

and buy Gunn tranceivers for the 2 MB/s datalink project
(see Packet: Speed, More Speed, and Applications)

for $25 each for the used, tested units and $48 for brand
new ones. At hamfests, I've seen them as cheap as $5 each.

If you are really on a budget, consider asking around the
outfits that repair/service automatic door openers and intrusion
alarms. Often, they have broken electronics with perfectly
functioning Gunn transceivers--free for the asking. I have a
friend who did this and even some 24 GHz units!

The cheapest new dishes available are the 18 inch DSS offset
feed dishes. They will set you back $13+shipping/handling.
See the Dec 1995 QEX article by Paul Wade on how to use them
on X band.

Anyone know of a source of cheap 100MB/s modems and
digital hardware to support it?

In 8 Land you will have to upgrade to Advanced or better to change
your call. - recent vanity rulings withstanding. Your 2X3 call is a
Group D call originally set up for the Novice group. The Group C calls
(N8xxx) were set up for General/Tech/Tech+. These Group C calls in 8
land (and most other regions) are exhausted. Soooo the FCC issues
the next lower Group. Bottom line..In your region 8, all call sign
issues or changes for General and below will be KC8Cxx.

Unwanted Advise: Go for thirteen. I am a Tech+, but have not broken
the 13 WPM barrier (probably my own lack of consistant effort laziness)

And from Svalbard, OZ8RO will sign JW5HE until next Sunday, concentrating on the WARC bands, especially 30 metres.

Two Japanese islands will be activated this weekend:

On Uji Archipelago, JA6VZB/6 will operate today, the 28th, using CW on 7001, 10115 and 14040 kHz.

And on Tsushima, JA6WIE will operate until the 30th of April, and JR0GFM will operate from the 5th to the 7th of May.

Next the Rally News:

Today, the 28th of April, the Marske-by-the-Sea Radio Rally is held at the Marske Leisure Centre, in the High Street, Marske-by-the-Sea, near Redcar. The event features the usual traders and a bring and buy stand. Doors open at 11.00am.

The British Amateur Television Club Rally also takes place today, the 28th, at the Sports Connexion in Coventry. The event features outside broadcast TV displays, traders and a bring and buy stand. Doors open at 10.00am, or 9.30am for disabled visitors.

Next Sunday, the 5th of May, the Anglo-Scottish Rally is at Tait Hall, Kelso. Doors open at 11am, or 10.30am for disabled visitors. Talk-in is on S22. The event features trade stands, a bring and buy stall and a raffle. For details contact Gavin, GM0ALW on 01573 226372.

The National Vintage Communications Fair also takes place next Sunday, the 5th, at the NEC Birmingham. There will be more than 300 dealers selling items relating to early technology and doors are open from 10.30am to 5pm. For further details telephone 01398 331532.

On Monday, the 6th of May, the Dartmoor Radio Rally takes place at Yelverton Memorial Hall, Meavy Lane, Yelverton, Devon. Doors open at 10.30am and there will be access for disabled visitors. Talk-in is on S22. Telephone 01822 852586 for more information.

Also on Monday, the 6th, the Mid Cheshire Amateur Radio Society Rally takes place at Civic Hall, Winsford, Cheshire. For more details telephone 01606 77787 during the evening.

Now news of a special event station:

GB0RCO will be in use from Rishworth School, Ripponden, West Yorkshire, next weekend, the 4th and 5th of May. The station is to celebrate the reopening of the Rochdale Canal at Sowerby Bridge. Operation, from 10am on the Saturday to 4pm on the Sunday, will be on 80m and other bands, SSB and CW, using a G5RV. Further details can be obtained from David, G0DLM, on 01422 202306.

The ATV repeater, GB3RT, which operates on channel RT1-2, was taken out of service for maintenance on Monday the 22nd of April. Details of its

return to service will be reported as soon as they are known. Further details can be obtained from Graham Hankins, G8EMX.

Now for the HF contest news:

This weekend, the 27th and 28th of April, the Helvetia Contest takes place on the HF bands from 1300 UTC Saturday for 24 hours. Operation is on both CW and SSB and brief rules are on page 21 of the April RadCom.

On Friday, the 3rd of May, an event in the RSGB Slow Speed Cumulative contest takes place from 1900 to 2030 UTC. Operation is on CW only between 3540 and 3580 kHz. The full rules can be found in the September 1995 edition of RadCom.

Next weekend, the 4th and 5th, the Italian ARI DX Contest takes place on the HF bands from 1200 to 1200 UTC, using CW, SSB and RTTY. Brief rules are on page 21 of the May RadCom.

Next some VHF contest news:

On Saturday, the 4th of May, the RSGB 10GHz Trophy Contest takes place from 1400 to 2200 UTC on all modes.

Also on the 4th, the RSGB 432MHz Trophy Contest runs from 1400 to 2200 UTC on all modes.

And next weekend, the 4th and 5th, the RSGB 432MHz to 248GHz Contest takes place from 1400 to 1400 UTC on all modes.

The full rules of all RSGB contests are in the Rules Supplement sent to all members with the September 1995 RadCom.

And now the solar factual data for the 15th to the 21st of April:

The 90 day solar flux average on the 21st was 71 units, the same level as last week. Electron fluence levels were mainly at a very high level while x-ray flux levels remained at A1 units. Geomagnetic activity was at "sub-storm" levels on most days and this activity was due to a coronal hole in the sun's southern hemisphere. The only "quiet" day was the 16th with an Ap index of 10 units and the average for the period was Ap 20 units. The aa indices are now distributed on the packet network.

Now the ionospheric data for Central France. The period from the 12th to the 18th of April saw levels increase to 7MHz on the 13th but then decline to 5.1MHz by the 15th. However, levels increased again to 7.5MHz on the 17th to give an average of 5.9MHz. The darkness hour lows increased and were up to 3MHz by the 17th, making the average for the period 2.5MHz. The daytime highs were between 1800 and 2100 hours except on the 18th, when they were at 1300 hours. The darkness hour lows occurred at 0400 every day except on the 17th, when they took place at midnight.

And lastly the solar forecast. Solar activity is expected to continue at quiet levels, and solar flux levels are expected to decline to the high

60s as the quiet side of the sun rotates in to view. Geomagnetic activity is expected to be mostly "quiet" for the coming week. Ionospheric MUFs for the south during daylight hours are expected to be about 18MHz and 15MHz for the north. The darkness hour lows are expected to be about 11MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Bravo and M1 Alfa Alfa series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Echo X-Ray series.

Date: 25 Apr 96 14:11:33 GMT
From: taylor@tix.timeplex.COM (Seth Taylor)
Subject: Are telephone DTMF the same as our DTMF

Some mis-information has been given abt DTMF from several sources
but this is my try at it:

DTMF is defined by several US sources including EIA-464A and
Bellcore in their document, SR-TSV-002275 (formerly Notes on the Network)
BOC Notes on the LEC Networks, issue 2 April 1994. The International
CCITT standard is Q.23. **The tone pair frequencies are exactly the same
world wide, EIA, Bellcore and CCITT.** There may be differences in
transmitted levels and call progess tones from country to country.
The column 4 digits which are ABCD on some touch pads are used
primarily by the US military for pre-emption and are designated Priority,
Immediate , Flash and Flash Overide (White House level). Per Bellcore
documentation, the column 4 digits have no application in the PSTN
(that's why regular telsets don't have 16 digit dial pads.) So as long
as the DTMF digits from any telset, 2 meter radio or other source
hit the phone line at a nominal -7 dBm per tone (-4 dBm composite)
the call will go through.
The usual failure of dialing DTMF on land mobile or ham rigs into
the PSTN is related to to probelms that frequently occur:

1. If the signal to noise ratio is too low, e.g. speech or other noise
is sent along with the DTMF, some DTMF decoders will reject the digits
because they recognize the noise as speech (this is to prevent falsing).

2. If the higher frequency of any DTMF tone pair is more than 4 dB
weaker in level than the lower frequency of that tone pair, the phone line
(the PSTN) may or may not recognize that digit.

From: bhoyle@ac.net
Subject: Eyewitness SKYWARN account of Zebulon (NC) Tornadoes

Some people like to skydive, some like to climb mountians (Everst,
K2, etc.) , and alot of other dangerous things I would not do. But I
leave it up to them to decide for themselves what is to dangerous. If
someone wants to watch a tornado, do it. But the minimum you should
know befor running out to watch one is that they are unpredictable,
and you could be killed. If you understand this and still want to

watch. Have fun and good luck!

They are kinda the same. Farnsworht is learning the chars at the
target speed<18 wpm is the accepted norm but I used 22> with spaceing
between the letters great enough for 5 wpm.

Koch recommends just one letter @ a time then adding a second and
so on and so forth. All your doing is strong arming it. Farnsworth
isn't really a teaching method but a method of sending the code that
has become the standard.

> I cannot seem to understand the difference between the two.
> Any advice would be very appreciated

I'm not a big expert on this, but as I understand it Farnsworth refers to sending the individual characters at a set speed, usually higher than you are trying to learn. The spacing between the letters and words is varied to achieve the desired speed. In this way you can learn the individual letters at say 13 wpm and have enough space between them to copy 5 wpm. Pretty useful for training your ear to good higher speed code. Without Farnsworth you start out with long drawn out dits and dahs and 5 wpm and make the individual dits and dahs shorter and shorter as your speen increases. This would mean you have to constantly adjust your ear as the speed increased since the sound of the letters would be changing.

Some VE's will give you the option of taking your test with Farnsworth coding.

The Koch method uses Farnsworth code, but has a method of learning the code in certain groups. When used with SuperMorse you learn with random groups instead of sample QSOs or recognizable words. Make these random length groups and you really get a workout. After learning to copy this way you switch to words and then QSOs. There is a suggested sequence of learning the letters, characters, and numbers.

The beauty of the Koch method is that you cannot "cheat". Random groups cannot be anticipated like real words can.

So in summary, Farsworth describes how individual characters are sent and spaced, and Koch describes a method to use on top of Farsworth to learn the characters randomly at first and then in words and QSOs. Together you get a pretty good method to learn high speed code right from the beginning with a really good computer aid, SuperMorse.

Hope this helps.

I have a Larsen 2/440 antenna on my 94 Integra. I went with the glass mount because of the hatchback design of the car. It seems to work about as well as the Larsen NMO mount 2/440, and performance on 440 is a lot better than on 2 meters.

It appears that they changed the design somewhere along the line. A friend has the new style on an Acura just like mine, the new antenna is shorter and from what I understand it doesn't have any adjustments that can be made to it on the assembly line. The current version doesn't seem to perform as well on 2 meters.

If the outside coupler gets filled with water, the SWR goes through the roof and it radiates about as well as a Cantenna. Then you'll have to take the coupler apart, dry it out, and put it back together with RTV.

It does ok around town for what it is, but I would only use it as a last resort. The next time I buy a car I'm going to think about antennas before I get off the lot. :-)

No; the use of tactical callsigns (that's what they're called) does
not relieve you of the requirement to Id with your FCC-assigned call
sign at the usual times. A look at Part 97 or the ARRL Rule Book will
verify this.

>g0d forbid if they have to do some work to get a license!

I've suggested the following several times and will
note that the pro-code people seem to prefer
to ignor the suggestion entirely as if it was never
even mentioned...

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and
attempt to bring them together. Step one is acknowledging that there

is a middle ground. In the CW debate, the middle ground most frequently mentioned seems to be that even if CW is less relevant today, there should not be any elimination of CW testing, unless there is an increase in difficulty for the theory elements. What I propose here may not be a perfect answer, but it does seem to address both concerns.

Current test requirements for General and Extra require the passage of a CW test at 13 wpm and 20 wpm respectfully along with a separate theory test. In both cases the CW test is a stand alone, pass (70% correct) fail requirement. But what if we offered test takers the opportunity to take the test elements as they do today OR, as an option, we let them take the 13 wpm or 20 wpm CW test as an integral part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a passing score of 70%, they would be granted an CSCE and then take the theory test as before. However, if they failed the CW test, they would be permitted to merge the CW test results from that days test with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I havent shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isnt issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didnt attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to

correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

I forget the dates, but I just saw the announcement on the ARRL Web site. Last year, Ham Week ended with Field Day weekend, which makes sense and might well be the case again this year. ARRL has a publicity kit that's available for the asking -- again, the Web site (www.arrl.org) is an easy place to request this.

Paul,

This Chris Greenhalgh fellow is simply a moron. He allows his hatred
toward Drew to cloud what little judgement he might have. Perhaps he
would like to explain to Arthur Ashe's family that it is all a big
misunderstanding Arthur's tragic death and all. Wasn't caused byt that
transfusion.

It is a wonder that anyone associated with and institution of higher
learning could be so ignorant. Kind of makes you wonder what a

Electronic Tech II can do. Mr. Greenhalgh it would serve you well to become a bit better informed your ignorance could cost you dearly.

Well back to the bands where the signal to noise ratio is a good bit better than here in the news groups.

73 de Jerry

>those who are capable than from those who aren't.

Oh really, based on what facts? A cursory examination of the rampant
neo-conservative views and the application of which seem to be prevelant
in your country would indicate otherwise. For example, examine the the
mortality rate of births in the U.S. I understand that the infant
mortality rate in the US is now higher than in certain Third World
nations. Hardly an endorsement of aggresive free market principles.
Unless, of course, it is your government's policy to have such a high
infant mortality rate resulting in less welfare later on? I have my
doubts.

By the way, you may not indeed have a written contract, but there is
a social contract between the government and its electorate. Part
of that social contract is that the state undertakes to protect the
individual from the those who do not wish to abide by the norms and
standards for a decent life. The punishment for failure to follow
these norms and standards, is the law. I understand that the U.S.
has the highest incarcertation rate of any nation in the western

world, so much so that I heard recently that your country is building one prison per week. Yet, when the backgrounds of most of these inmates are examined, you find that there are common threads of their lives... poverty, violence, drugs, crime. Now, I do not believe that welfare will solve all those problems, because no one answer is the cure, but it would seem to me that it would be more cost effective to have welfare to mitigate these vices, than to spend even more money to house these individuals in these universities of crime and depravity.

If you don't wish to be taxed in order to help your fellow man, Jack, you have every right to campaign for that. But the social costs that you will pay down the road will be far greater. Pay me now, or pay even more, as the man once said.

>You don't want to

Hi John.

Numerology is where you find it!

Examining the numbers listed in the "Organization" heading of your original posting, we find highly relevant information!

the numbers are: 800.444.1458

Obvioulsy the 800, being the prefix of toll free calls, doesn't count.

The 444, on the other hand, is VERY inportant. Note that each number in 444 is exactly 2 away from each number in 666!

The last sequence of numbers also contains meaning. add: 1+4+5+8 and you get 18. Note that the 1458 could be viewed as the first in the sequence of numbers, when read backwards. You can therefore add another 1, ending up with 19.

So we have a as a result the number 2, and the number 19, which, when interpreted as the positions of letters in the alphabet, give you BS, perhaps the most important thing that can be said about numerology!

>FCC's budget goes towards amateur-radio-related activities (applications,
>monitoring, fining, etc?) Are not you, the American taxpayer, asked to
>subsidize this cost every year, just as you are asked to subsidize the
>welfare-state programs?
>

Indeed I am not an American taxpayer, thank heavens. Therefore, I do not care one iota what the FCC spends on amateur radio related activities.

I commend Deignan's very skillful job of quoting out of context, such an honour is reserved for the chosen few, no doubt. For those who cannot read the former post, it was in response to Robert's view the the abolition of Morse code is akin to the supposed "I want something for nothing" denigrations, making the parallel to those who are on welfare. I replied concerning the basis of welfare was one of need and want, but that the basis for welfare was not analogous to reasons for the abolition of Morse code. I accept that my taxes go to the government for the purposes of supporting welfare programs, the regulation of amateur radio, police and fire services, education programs as well as an armed forces and a health care program. Otherwise, we would not be able to live in a civil society. Perhaps you might resent welfare, and to a certain extent, so do I, but considering the benefits that I accrue, a relatively crime-free environment, where one can walk down the streets at night, a long life span, freedom to live where I want, the priceis small. Thus, I accept that I have a civil duty to contribute to the welfare of my fellow human beings through my taxes. No doubt, if there is waste and wanton expenditure, it should be eradicated.

If others believe that all welfare recipients are cheats and milking the system, they are most welcome to reform it. In fact, you have every right to abolish it, but you will do so at your peril in the overburening social costs.

>Furthermore, amateur radio consumes valuable spectrum that could be
>sold. That money could reduce the deficit, and directly affect the
>amount of taxes you will have to pay to finance the deficit and
>national debt.

>

How that relates to my previous posting is lost on me, but in any case, I am not aware that the FCC is undertaking to "sell" the amateur service spectrum. I suspect that they would not do so because of the international implications inherent for such undertakings. But if anyone has any further evidence of this is indeed being considered, please send me an e-mail.

To all radio amateurs

SB DX ARL ARLD021
ARLD021 DX news

This week's bulletin was made possible with info provided by Maria, ZS1AFZ, Rich, G3NBB, Mauro, I1JQJ, Chris, G4BUE, Tedd, KB8NW, the OPDX Bulletin, and Contest Corral from QST. Thanks to all.

NORTH KOREA, P5. A group of Japanese DXer's who operated XY1HT is expected to be visiting North Korea soon. It has been heard they will apply for licenses. The Hungarian couple of Sanyi, HA7VK, aka XU7VK and XU95HA, wife Judit, HA7RJ, will arrive in Phenjan May 21 and be in the country until the end of July. Sanyi is trying to obtain permission to operate. P5BK was spotted on the Japanese DX Packet Cluster 14295 kHz SSB at 0920z.

GRENADA, J3. J37Q and J37P will be active on 20 meter CW through May 7 during their early evening hours.

MARION ISLAND, ZS8. Chris, ZS6RI, is enroute to Marion Island by ship. He hopes to be active in the WPX CW contest. 160 to 10 meter CW and SSB is planned for after the contest, as well as some 6 meter work.

FRANZ JOSEF LAND, R1FJ. Sergey, R1FJZ, will not be picking up QSL cards from his mail drop until after he goes off the air in August. Please be patient.

BURUNDI, 9U. Jean-Pierre, 9U/F5FHI, has changed his call to 9U5DX and has been on 17 meter CW and SSB from 0800 to 0930z. QSL via F2VX via the REF bureau. Alfredo, 9U/EA1FH, is now signing 9U5CW. And listen for Peter, ON6TT, on 160 and 80 meters during the weekend.

SAINT LUCIA, J6. Listen for the honeymooning Eric, F5CCO, June 27 to July 4. QSL via home call.

REUNION ISLAND, FR. Bernd, DL1VJ, and Heinz, F5NRG, will sign TO3R during the CQ WW WPX CW Contest May 25 and 26. Before and after the contest they will sign FR/home calls. QSL via F6KLS.

ARUBA, P4. Tom, K8CX, will sign P43WLP until April 27. QSL via K8CX.

SVALBARD, JW. Rag, OZ8RO, will be active as JW5HE May 1 to 5 and will focus on 30, 17 and 12 meters.

ISRAEL, 4X. The 4X6TU beacon is on the air from Tel Aviv on 14100, 18110, 21150, 24930 and 28200 kHz. 4X6TU joins ZS6DN, LU4AA and YV5B on these frequencies.

IRAQ, YI. Tom, YI9CW, continues to be active daily from Baghdad. Check 7007, 14007, 21007 and 28007 kHz. He operates 30, 17 and 12 meters from time to time. Tom returns to Poland sometime after the end of May. QSL via Tom Rogowski, SP5AUC, PO Box 11, 02-800 Warsaw 93, Poland.

COCO ISLAND, TI9. Listen for the TI9X DXpedition to start Friday or Saturday.

ALAND ISLANDS, OH0. Dave, K8MN, plans to be on the air from Friday, April 26 at around 2200z through Sunday about 1300z. He will operate CW, SSB and RTTY. His CW will be at least 25 kHz up from the band edge to give the General and Advanced class operators a chance. QSL via WA8JOC.

COCOS-KEELING ISLAND, VK9C. Ops VK4FW, VK2IVK, VK4DHM, and perhaps others will be active May 18 to 31. They will operate mostly SSB, though some CW is possible. QSL via VK4FW, Bill Horner, 26 Iron Street, Gympie, QLD 4570, Australia.

MACQUARIE ISLAND, VK0. Warren, VK0WH, can be found working 40 meter CW on Monday, Tuesday or Thursday. Check around 7009 kHz between 1000 and 1100z. He sometimes shows up on 14038 or 14260 kHz with his QSL Manager. QSL VK9NS.

ANGUILLA, VP2E. JH4IFF and JH4EZI will sign VP2EFF and VP2EZI, respectively, April 29 to May 3, all bands/modes. JH4IFF may sign FS/N2HNQ in Saint Martin afterwards.

SENEGAL, 6W. F5OGL, aka S92AA, S92PI, TR8GL and TR0D, will be QRV for two years from Dakar starting sometime in July. CW, SSB and RTTY are planned for this all band activity. QSL via F6KEQ.

SABLE ISLAND, CY0. The 1996 Sable DXpedition, CY0AA, operation has been extended to 15 days, June 18 to July 2. QSL HF contacts via WD8SDL. QSL VHF contacts via VE9AA. Listen for Dan, WA4DAN/CY0, Bob, KW2P/CY0 and Ron, AA4VK/CY0 during the first week of October.

MINAMI TORISHIMA, JD1. JG8BQI/JD1 is QRV most weekends. QSL via JA8CJY.

IWO JIMA, JD1. JH2ENF/JD1 is on the air from the Kazan Archipelago about 250 km south of the Ogasawara Islands, operating mostly CW.

THIS WEEKEND ON THE RADIO. The Helvetia Contest, Nebraska and South Carolina QSO Parties, QRP to the Field and YU DX Contest are on the activities menu for this weekend. For more info check page 109 and 110 in April QST.

On our club's repeater, pretty much if it can be said on national television, it's fair game for the repeater. It doesn't mean that everyone sits around saying "ass, hell, damn, crap" all day, but it's really not a big deal if we do.

Decency is measured by a public standard. As I understand it, the 147.435 repeater in Los Angeles is filled with profanity bad enough to make a sailors ears bleed. When some folks went to court over it, the courts decided that there was no "decent" public standard for that machine, and as such, it was acceptable.

Food for thought. Swear long enough on your repeater, and soon it won't be illegal.

Jim & Donna,

Yes, that type of language is considered inappropriate. Having said that, there's little you can do about it. I read someone else's reply, and his attitude pretty much sums up why no action is ever taken against people that "push the envelope". Most people (the FCC included...) do not care about the "little" infractions.

The best course of action you can take is to operate *YOUR* station according to the law and in the best tradition of amateur radio. If you can, scan around for other repeaters to utilize. My "why and where-fore" for disliking this kind of behavior may differ from yours (I have three small children that frequently listen to Dad on his radios...), but bottom line is that it *IS* wrong and should not be condoned.

6219. 220Mhz & 440Mhz Radiation?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-26 00:00:00 UTC
From: sgrgasov@jagor.srce.hr
Message-ID: <4lqtpr$lt8@bagan.srce.hr>
Source record: 226896

I know this is pretty dumb question but life is no game :-).

I have two antennas mounted on the window of the office where I work. One is 2 element yagi transmiting constantly on the ~220Mhz band with the power of about 2W. The other is ~440Mhz GP antenna used for the packet radio transmiting with the power of about 0.5-1W cca. let's say 15 sec in a minute. Is it safe to have two transmitting antennas just about 10 foot away from the place where I spent most of the day? There's only window between. One of my friends told me it's not dangerous but he has a 10Ghz microwave link right on his desk so I want to hear opinion from someone else. I just don't want to dye from cancer or something similar to that.

Thanx a lot. (Sorry for my english).

> Jim & Donna

Profanity is prohibited by part 97. But like profanity on television or commercial radio services, what is considered obsene or profane is determined by local standards. There really isn't a list (but George Carlin has one that may be a good guideline :) Most people are not offended by the words "hell" and "damn" the way they are usually used. If you are hearing a lot of it over a repeater and it bothers you, speak to the repeater/owner trustee. But don't hold your breath waiting for anything to be done about something that doesn't bother most of the people involved. You're best bet is to just ignore it and not let it bother you or use another repeater.

It is not a minor point, it is *the* point to many of the hair shirt
religionists who want to maintain the mandate. It has no place in
a secular licensing discussion, however.

>2. The Amateur Hobby is actually tolerated/encouraged by the government
>(at considerable expense! what is 1MHz at 220 worth?) not just as a fun
>thing for nerds like me, but as a national _Emergency Resource_!!!
>The advantage that a di-dah code has in an emergency is that nearly
>_ANYTHING_ may be keyed to make communication possible!

The amateur radio *service* does have emergency communications as
one of its purposes, there are three other purposes, but how many
emergencies in the last 10 years have depended on manual Morse
usage by amateurs to save the day? About as many as relied on
spark, hmmm? Most amateur emergency communications has taken place

on VHF FM phone and digital, with some routine health and welfare traffic on HF phone and digital (the first news of a recent hurricane's damage was sent by HF Pactor). Morse usage in disaster communications has become practically extinct in the same way as reliance on spark (or smoke signals) has become extinct.

The government doesn't allow us to keep billions of dollars worth of spectrum in order to maintain a pool of operators conversant in obsolecent techniques no longer used for emergency comms. The government expects us to be conversant with modern and effective techniques (advance the state of the art, and maintain a pool of skilled operators in those arts). We no longer expect our operators to know how to adjust the decrement on a spark transmitter, and we no longer need to require them to be proficient in the manual telegrapher's code (even the Coast Guard has given that up).

>(Does anyone remember the POW that spelled T-O-R-T-U-R-E with
>eye-blinks?)
>Therefore a certain minimum level of on-off expertise is important within
>that group.

Then how come the military no longer teaches Morse? And how come the prisoners in the Hanoi Hilton didn't use Morse to communicate with each other but instead used the prisoner's tap code (a matrix code)? (The prisoner's code is used because you can teach it to someone in about one minute flat.)

Gary

My have you led sheltered lived. No... neither is banned. Neither is obscene. Both are offensive to some (depending on context). While I personally would prefer less "active" verbage, I doubt that many would be so offended as to create a fuss. Ignore the people that use such language if you are offended, just as you would in everyday life. Of course you can always tell the individual that you do not appreciate such language. BTW, I can't believe you are so sheltered that you do not hear these expletives and worse thousands of times a day. TV is rife with words much worse that those. Harden your ears and prepare to come across worse language than this.

I AGREE with the people that say that Morse Code is less than useful...I took a class a few years ago, and one of the main reasons I didn't complete it, was the stupidity of having to learn code...The also agree with the guy who said that the ONLY people dumb or assinine enough to want to force you to learn code are old fartbusters who will be dead soon anyway, so why should we have to pay for their final years with our blood!

Indiana Balloon Launch Cancelled due to Weather

Windtrax 96, a series of helium balloon flights for fun and education
has cancelled it's first flight of the year scheduled for Saturday April
27th due to high winds preditcted at launch time.

Windtrax was due to carry a ATV transmitter, GPS packet system and a cross
band repeater system aloft to 100,000 feet.

According to Chuck Crist, WB9IHS the next chance Windtrax will be considered
for launch is around June 1st. Please check for announcements in
rec.radio.amateur.misc and on packet on the date and other information
regarding this launch.

>operators "and their friends". So, the only people excluded are the enemies
>of gay hams. So, my guess is the gay members of Lambda wanted a club where
>they could discuss and do ham radio without running into the kind of
>hostility we've seen right here on this newsgroup.
>
I can't believe it. This is what all the hysteria is about? Don't look now,
but many of you are probably already close friends with someone who is gay.
You just don't know who it is yet. But don't worry, you won't catch it.
It's not contageous. In the meantime, try to find something actually worth
getting excited about, like: If a tree falls in the forest, and no one is
around, . . .

Searching the Ohio State webb I found no reference to Mr. Greenhalgh as a spokesman for the School of Medicine. Perhaps you should run these posts of medical "facts" through them or drop the Ohio State University from your sig line. Using the school name lends credability to your ravings that they should not have. It looks like you got caught saying something stupid to try and get at Drew now you want to split Frog Hair to save face. Shutting up now would be good.

Jerry-- no crow on the menu :) :)

6230. This Week in Amateur Radio #161 (for air through 5/3/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-27 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5DLuYIB.sanderman@delphi.com>
Source record: 226752

Here is a summary of news items covered on edition #161 of
"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 3-May:
-
1. FCC Shifts Gears on Handling RFI in Consumer Devices
2. Atlanta Olympics Does an About-face on Hand-held Ham Gear
3. Commission On-target for Launch of Vanity Call Sign Program
4. May Eclipse to Affect Operation of AO-13
5. Dove-OSCAR 17 is Still Dead, but Some Progress Reported
6. SAREX to Fly Aboard Shuttle Missions in June and August
7. Spartan Inflatable Antenna to be Tested on STS-77
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Weekly Propagation Forecast with George Bowen, N2LQS
10. Broadcasters Ask for Digital Copy Protection Legislation
11. IC Approves New Motorola Cell Phone Encrytion Technology
12. "The RAIN Dial-up" from Chicago
13. Amateur Radio to Fly Aboard Sheboygan Rocket Launch
14. Special Event Station Calendar
15. "Amateur Radio Newsline" - Edition #976 from Los Angeles
16. Willie Steuder, Noted Recording Engineer, Dies at 84
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Due to the dissolution of the "Tech Talk Network", the
service WILL NOT be carried on satellite. Negotiations for the
donation or lease of satellite space continue in earnest. When a
new agreement is reached, "This Week in Amateur Radio" will return
to satellite air. Details will be posted as conditions warrant.
All affiliates are requested to contact the producers for further
information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

6231. Re: Selling out of ham radio

In article <4ll9h7$dps@dawn.mmm.com>, grhosler@mmm.com (Gary Hosler - KN0Z) says:
>Perhaps you are not aware of it Drew, but the CW requirements to get
>on HF IS just 5 WPM. This entry level will allow access to most of
>the HF bands on CW, and 10 Meter SSB.

yes, if you can refer to a 50 khz slice of 80, 40, 15, and 10 as being
on *most* of the HF bands. at this point of the solar cycle, not too
much is happening on 15 and 10, especially for the novice who may not
have the expertise or cash to put up a good beam. 80 also presents
a problem for erecting an efficient antenna.

so, at the moment, probably the best band for the novice to work
is 40, where an efficient vertical is easy, and there is generally
an opening to someplace 24 hours a day. but, 7100 to 7150, the novice
slice, is also fair game for the megawatt international broadcasters.
in practice, i've found 7110-7120 and 7140-7150 to be about the only
place where you can actually operate.

to make a long whine short, 5 wpm buys you about 20 khz in the
HF bands.

>
Semantics. HIV, in most cases, leads to AIDS. Nit-picking over acronyms won't
change that. If you mean to tell me that a blood transfusion from someone in
the last stages of AIDS won't pass on HIV, and ultimately AIDS, but one from
someone newly diagnosed with the early stages of HIV will, I would have to
disagree.

If you are talking about the DTMF memories, the instructions are found on
page 46-47 of the manual. Basically, have the phone icon diplayed, hold
"FM" for a 1/2 sec, and press any numbered key. Then turn the dial to
select the DTMF memory number in the memory box at the upper left, and
use the arrow keys to display each digit. Good luck.

"Relatively" rare? They seem to happen more frequently than hurricanes in
S. Florida. Would "not uncommon" be an exageration?

6235. NEED LONG RANGE PORTABLE PHONE!!!

Newsgroup: rec.radio.amateur.misc

From: K5ESW@nando.net
Message-ID: <4lt747$f3v@castle.nando.net>
Source record: 226759

A ham friend of mine will be sailing in the Carribbean for a few years. She is a new General class and has an HF transceiver. She is thinking about getting a TNC and wants to be able to send and receive messages to an HF digital node.

The objective is to have the equivalent of e-mail contact with ham friends while sailng.

I have heard about stations that operate on HF and operate like a bulletin-board-system. They are on most of the time and will store and forward messages. Does anyone have any references to this such as frequencies, callsigns, and protocols used?

73,
Paul Ferguson
K5ESW@nando.net

6238. famous hams

List of 'famous' hams

7L2NJY Dr Mamoru Mohri, Japanese astronaut
9K2CS Prince Yousuf Al-Sabah
9N1MM Father Marshall Moran, missionary (SK)
A41AA Qaboos Bin Said Al-Said, Sultan of Oman
EA0JC Juan Carlos, King of Spain
FO5GJ Marlon Brando aka Martin Brandeaux, actor
G2DQU Lord Rix (formerly Sir Brian), former actor and charity head
G3TZH Tony Dolby, brother of "the" Dolby
G3YLA Jim Bacon OBE, weatherman
GB1MIR Helen Sharman, astronaut
HS1A Bhumiphol Adulayadej, King of Thailand
I0FCG Francesco Cossiga, former President of Italy
JA5FHB Japanese Minister for Transport and Communications
JY1 King Hussein of Jordan
JY1NH Offspring?
JY2 Queen of above
K0HWY Tex Beneke, band leader
K1OKI Mickey Schulhof, head of Sony US
K2HEP John Sculley, CEO of Apple (lapsed)
K2ORS Jean Shepard, author
K4LIB Arthur Godfrey, TV performer (SK)
K6DUE Roy Neal, television reporter
K7TA Clifford Stoll, author & scientist
K7UGA Senator (US) Barry Goldwater
KB2GSD Walter Cronkite, news reader
KB6LQR Jeana Yeager, Voyager '86 pilot
KB6LQS Dick Rutan, Voyager '86 pilot
KB6OLJ Paul J Cohen, mathematician
KC4OCA Gordon Barnes, weatherman
KD6BUP James Treybig Jr, son of W6JKV?
KD6OY Garry Shandling, comedian
KG7JF Jeff Duntemann, author
LU1SM Carlos Saul Menem, President of Argentina
N4KET David French, CNN newsman (K4... ?)
N4RH Ralph Haller, FCC PRB chief
N5YYV Kathy Sullivan, Chief Scientist NOAA (former astronaut)
N6FUP Stu Cook[s], baseball player
N6GGM Laura, XYL of N6FUP
N6KGB Stewart Granger (born James Stewart), actor
N6YOS Priscilla Presley / Lou Lou Beaulieu, actress (any relation?)
NK7U Joe Rudi, baseball player

ON1AFD Count Dirk Frimouth, Belgian astronaut
S21A Head of Bangladeshi PTT
SU1VN/P Prince Talal of Saudi Arabia
SV2ASP/A Monk Apollo
U2MIR/UV3AMMusa Manarov, cosmonaut
UA1LO Yuri Gagarin, cosmonaut (SK)
VK2BL Graham Connelly, radio announcer
VK2DIK Dick Smith, entrepreneur & millionaire
VK2IG Dave Grey, Deputy Commissioner (???)
VK2KB Sir Allan Fairhall, politician
VK2YOW Bob Hughes, radio announcer
VR6TC Tom Christian, great**n-grandson of Fletcher Christian
VU2RG Rajiv Gandhi, Prime Minister of India (SK)
VU2SON Sonia Gandhi, XYL of VU2RG
W0ORE Tony England, astronaut
W2TQ Joel Miller, IEEE lawyer
W3ACE Armin Meyer, US Ambassador to Japan
W4ZG Worth Gruelle, started Raggedy Ann and Andy
W5LFL Owen Garriot, astronaut
W6EZV General Curtis LeMay (SK)
W6FZZ Samuel F.B. Morse III
W6JKV James Treybig, CEO of Tandem
W6QHS President of California Microware
W6QYI Cardinal Roger Mahony
W6ZH Herbert Hoover Jr (son of ARRL Pres, grandson of US Pres)
W8JK John Kraus (astronomer?)
WA2MKI Larry Ferrari, organ player
WA4CZD Chet Atkins, GUITAR PLAYER (alright! alright!)
WA4SIR Ron Parise, astronaut
WA6TJM President of ISD Inc
WA7WYV Andy Griffith, actor
WB4KCG Ronnie Milsap, singer
WB6ACU Joe Walsh, singer
WB6RER Andy Devine, actor (SK)
WD4SKT Donnie Osmond, entertainer (?)
K0HWY Tex Beneke Band Leader
K2ORS Jean Shepherd Author
K4LIB Arthur Godfrey (SK)
K4ZVZ Paul Tibbets Pilot (A-Bomb)
K6DUE Roy Neal Newsman
K7UGA Barry Goldwater Senator
KB2GSD Walter Cronkite News Anchor
KB4VJG Tommy Tucker
KB6LQR Jeana Yeager Pilot-Voyager
KB6LQS Dick Rutan Pilot-Voyager
KD4WUJ Patty Loveless Singer
KD6OY Gary Shandling Entertainer
KI6M Stu Gilliam Entertainer
KN4UB Larry Junstrom Musician
N4KET David French Newsman

N6FUP Stu Cook Baseball Star
N6KGB Jimmy Stewart Actor
N6YOS Priscilla Presley Actress
NK7U Joe Rudi Baseball Star
W3NOD Jacob Beser Electronics Specialist
W4WRO Emory Gordy Jr. OM of P. Loveless
W6EZV Curtis LeMay General (SK)
WA3VJB Paul Courson
WA4CZD Chet Atkins Singer
WA7WYV Andy Griffith Actor
WB4KCG Ronnie Milsap Singer
WB4KVB Paul Yandell Musician
WB6ACU Joe Walsh Singer
WB6RER Andy DeVine (SK)
WD4SKT Donny Osmond Entertainer
WP4CO Jose Feliciano Singer

Several lists have propagated through the amateur community from time to time often with errors. For example, some lists claim N6KGB was actor Jimmy Stewart, when the call was really held by another well-known actor: Stewart Granger (whose real name was James Stewart, and who became a Silent Key in 1993). Many lists claim that Russian cosmonaut Yuri Gagarin was a ham (some lists even claim his call was UA1LO); there is no hard evidence that he was ever licensed. Another rumor insists that musician Jon Bon Jovi is a ham. He is not licensed but his cousin, record producer Tony Bongiovi, is KX2Z. Other lists indicate that musician Jose Feliciano is a ham; WP4CO's name is definitely Jose Feliciano, but he's not the famous musician. Donny Osmond was once licensed as KA7EVD, but his license has expired - another Donald Osmond holds the call WD4SKT, but it's not the same person. KD6OY insists that his name is really Garry Shankling, not Shandling, even though he lives in Los Angeles. And WA7WYV's name is indeed Andy Griffith, but he's never played either Andy of Mayberry or Matlock on television.

Royalty
Juan Carlos I de Borbon y Borbon, EA0JC, (1938-), King, Spain
Bhumiphol Adulayadej, HS1A, (1927-), King, Thailand
Hussein I, JY1, (1935-), King, Hashemite Kingdom of Jordan

Political and Religious Leaders
Francesco Cossiga, I0FCG, (1929-), President of Itally
Barry Goldwater, K7UGA, (1909-), former U. S. Senator (R-Az)
Carlos Saul Menem, LU1SM, (1930-), President, Argentina
Rajiv Gandhi, VU2RG, (1944-1991), former Prime Minister, Republic of India
General Curtis LeMay, W6EZV, (1906-1991), Vice-Presidential Candidate (with
George Wallace), 1968
General Anastasio Somoza Debayle, YN1AS, (192ident,

Republic of Nicaragua
Roger Cardinal Mahony, W6QYI, (1936-), Cardinal of the Roman Catholic

Archdiocese of Los Angeles

Entertainers/Musicians

Marlon Brando, FO5GJ, (1924-), Actor
Arthur Godfrey, K4LIB, (1903-1983), Entertainer
Burl Ives, KA6HVK, (1909-1991), Singer
Donny Osmond, ex-KA7EVD (expired), (1957-), Entertainer
Patty Loveless (born Patricia Ramey), KD4WUJ, (1957-), Musician
Stu Gilliam, KI6M, (1933-), Comedian
Larry Junstrom, KN4UB, (1957-), Rock Musician (".38 Special")
Stewart Granger (born James Stewart), N6KGB, (1918-1993), Actor
Priscilla Presley, N6YOS, (1945-), Actress
Alvino Rey, W6UK, (1908-), Musician/Bandleader
Chet Atkins, WA4CZD (1924-), Musician
Ronnie Milsap, WB4KCG, (1943-), Musician

New challenge for amateur radio.

When was the last time that you read or heard
something positive about amateur radio?
I can't remember either.
Everyone recalls and enjoys the Hancock
sketch where the man himself played a
pompous, petty and technically
incompetent ham communicating with a
world where everybody wanted to talk and
nobody wanted to listen. We remember
Tony Hancock's radio amateur because it
encapsulates truth about the hobby more
accurately than any words that we might
write about it.

Amateur radio desperately needs a new
reason for its continued existence.

Radio communications was the principal
driving force behind electronics
development from its beginnings until the
end of the second World War. It was used
to tie empires to their mother countries,
and then as an instrument of war itself
when empires disintegrated. Radio hams
found themselves involved in research and
development, especially in the early days
of radio, and then as a source of specialised
skills in the war years.

There was a post-war surge of interest
fuelled by the availability of surplus
equipment, most of which required
technical competence to adapt for amateur
use. But when this was gone, radio
amateurs became simple consumers and
mostly bought their equipment off the shelf
losing much of their technical
independence and usefulness. Galton and
Simpson were now able to document
Hancock's radio ham.

Somewhat paradoxically, the intellectual
decline in amateur radio reached a trough

when the numbers engaged in the hobby
peaked in the early Eighties. Two factors
combined and contributed in this. Firstly,
the multiple choice entrance examination
as an order of magnitude easier to pass
than its written predecessor; secondly,
radiocomms as a hobby was massively
popularised by the CB boom. Most of the
new influx could contribute nothing except
self-conscious and inane chatter using
equipment which owed more to credit card
companies than the owners' technicalcompetence. We are now seeing a
decline
in the number of radio amateurs as the
novelty wears off.

Naturally, this jaundiced view does not
tell the whole story. One only has to look
to the work of Amateur satellite groups and
the activities of Surrey University to
appreciate that some aspects of the hobby
remain challenging, educational and
useful. A few enlightened souls still
manage to push the bounds of RF design
engineering, usually by combining the
demands of their jobs with the pursuit of
their hobby. But if amateur radio is to
command any respect - and retain its
frequency allocations and privileges - it
must take up new challenges.

The market requirement for cordless
communications once again casts RF
engineering as a driving technology. While
it seems unlikely that amateur radio could
contribute directly at chip level
development it has a role to play in
enthusing and educating the next generation
of RF engineers. As editor of this magazine
I hope to hear from radio amateurs
prepared to experiment with direct digital
synthesis, If band, DSP spread spectrum
communications, high performance small
signal and large signal RF systems,
broad band design techniques and packet
transmissions etc.
If amateur radio finds itself incapable of
of, or indifferent to accepting a new challenge,
then it does not deserve to survive.

Frank Ogden G4JST.

UKRS News Bulletin Part1

29 March 1996

United Kingdom Radio Society
==========

Since the formation of UKRS was announced last week, the response from packet users and internet users has been enormous. When it is realised that, as this bulletin is being prepared, there have been no more than three or four postal delivery days, the current membership figure of just under 100 is impressive to say the least. Realise too that there as many application forms again which have been downloaded from the CLIVE database in GB7OAR or requested by landmail and have yet to find their way home, and you begin see the level, not just of interest, but of support which UKRS has attracted.

Then consider that all those subscribers and enquirers are committing as Founder Members to an organisation which has been born on a wave of hope and promise, in the face of not inconsiderable opposition, and you may begin to see how great was the need. If faith can move mountains, and proper planning prevents pretty poor performance, perhaps UKRS will after all confound its critics and fill that need.

There are a number of items of interest to members and it is felt appropriate therefore to post the following:

First, the Royal Mail has advised us that a move to a new Sorting Office is now complete and that our PostCode has therefore been changed. Fortunately, no large amounts of stationery have been printed with the "wrong" code. Please note that the corrected PostCode for UKRS is now CW8 1FA. Ironic, really, since we opted for a Box number so that we would not be inconvenienced by any subsequent relocation of our Administrative Centre !

Suggestions that the move to a new Sorting Office was necessitated by the volume of UKRS mail are, of course, unfounded and the upgrade of the Postie's cycle to a shiney new moped is surely just coincidental :-)

File 11 (Membership Application form) in the UKRS topic of CLIVE at GB7OAR has been amended and members are asked please *not* to utilise previous versions. This is important because we have taken the opportunity also to include the question / vote about members'

views in relation to the Morse Code and "A" licence which does already appear on the printed version being sent from the Admin' Centre.

Incidentally, the form was drawn in ASCII format. It does not look tidy when viewed in proportional fonts (eg: via Windows software) but prints properly without need of alteration if dumped straight to a printer as a plain (ascii) text file.

Members who have already joined without registering their view of that question need not send in a new form. Instead, it is suggested that they download and use File 20, which can be returned via packet to advise their choice. To accommodate obvious security considerations, members affected will be notified by landmail of the selection recorded for them when next they are mailed.

Next, we heard today that consideration of our proposed Memorandum and Articles of Association is progressing and that the draft has been passed by our Solicitors to Corporate specialists for expert opinion. The delay is frustrating, of course, but is felt to be very worthwhile because it should enable UKRS to learn from the mistakes of others. There is, in effect, little point in trying to "re-invent the wheel".

Some members have quite reasonably asked to know what it is about the proposed Memorandum and Articles which has necessitated such careful consideration. In a nutshell, the Founders have been determined to ensure that ALL servants of the Society, including the governing body itself, are not only entirely accountable to its members but can be "brought to heel" immediately if, for any reason and at any time, such appears to be necessary. Expert opinion is being taken so that, in setting such a "backstop" in place, no person or persons are vested with powers which are themselves superior to those enjoyed by the elected members.

Serious and apparently genuine difficulties with third parties are reportedly being endured by dedicated amateurs in one aspect of our hobby. Those difficulties are already being referred to the Founders, by members curious to know what UKRS might be prepared - and able - to do to help them. Understandably, those concerned have not yet had an opportunity to sensibly assess our Society's ability or resolve and, whilst willing to speak in general terms therefore, they do not yet feel confident enough to provide the necessary details.

This is reported here so that those concerned may be assured that, even at this early stage in our development, UKRS has on board trained and experienced investigators who are as able as any to look into the problems being described and, through the Society, take appropriate action. We have all heard the expression "a stitch in time saves nine": Time is often of the essence in such

matters and it is hoped, therefore, that the gentlemen involved might feel able to consider speaking in confidence with the Founders about their concerns in the very near future.

On a cheerier note, there are two very commendable initiatives which UKRS would like to commend to your support.

UKRS News Bulletin Part 2
IMMMMMMMMMMMMMMMMMMMM;
: Continued from Part 1 :
HMMMMMMMMMMMMMMMMMMMM<

Within our great hobby, we have thousands of friends whose difficulties pass unnoticed and unremarked every day. Unless a local colleague is able to effect some simple modification to their equipment, or is seized of above average initiative, many disabled amateurs struggle mightily to enjoy interests which most of us can take for granted. With your approval therefore, it is intended that your Society will set in place a specialist with specific interests in the needs of disabled members as they affect their enjoyment of amateur radio.

It is envisaged that our commitment in that area will complement the activities of other interested clubs and organisations and, as such, may have far-reaching effects for the better.

The second initiative which we are asked to address attentively is the encouragement of young people to our hobby, perhaps by nurturing links between interested members and local schools, cadet forces, scout troops et cetera. This will obviously call for some active participation by members but, encouraged and supported by the Society, they should find it a very rewarding exercise.

An OM with specialist skills in disability issues has already volunteered his experience and labour. If any member/s are minded to step forward and offer themselves in connection with the second initiative, please let G0MAM know by any of the modes shown below.

Further details of these and other developments will be posted as they occur.

Our immediate priorities remain the recruitment of members and, from within those members, volunteers to act as either "specialist interest advisors" or "caretaker" county representatives.

We need as soon as possible to organise the inaugural meetings at which those volunteers will discuss together the ways in which we shall take our new society forward. For those meetings to be productive and worthwhile, we obviously need to attract sufficient volunteers. It would be helpful if we could look to making a start in, say, six to eight weeks: Your help will be pivotal ....

Preliminary plans include Talk-In for those arriving by road, transport from the nearest Rail stations for those arriving by rail and some kind of simple buffet for all, although all this has yet to be finalised.

Members will recall that there was a space at the foot of the Membership Application form for the name and callsign of any existing member who might have introduced them to UKRS. This was included so that we might look to making available a small treat for the member or members whose efforts lead directly to the greatest number of new members. The nature of that treat and the length of time over which the scheme will run are still under review but current thoughts are that it should run until the first AGM and that there should be at least one "prize" which will be a handheld transceiver, or better.

Finally this week, you may wish to know that a national Press Release is currently being organised as the first major step in making ourselves known. We shall be addressing not only the hobby Press but the national Press too since it is felt that the formation of a new national society is a milepost in our hobby.

Regards,

Greg (G0MAM) @ GB7PMB

20 March 1996

United Kingdom Radio Society
==========

Since the concept of a new national society was mooted, I have received an increasing number of requests for details about where subscriptions could be paid. Although I have very gratefully noted the total commitment implied by such early offers of payment I have so far refused (politely I hope) to accept them.

That is because I was waiting for wiser counsel to confirm that my own expectations - which so many of you share - are attainable and that the new society can be so organised as to ensure that its members can safely entrust it to represent their best interests without ever feeling that they have "lost control" of it.

In light of some of the bulletins which have appeared recently, I should perhaps confirm that I realise members do not join an organisation in expectation of being consulted about every little issue that comes along. I have never suggested otherwise and, similarly, it was never my intention that the new society would freewheel aimlessly from one referendum to the next.

However, I specifically _am_ concerned by the ease with which the governing bodies of so many large organisations come to believe that they know better than their members about what those members need. Equally, I am concerned by the way in which, for all practical purposes, such governing bodies cease to be accountable to their members. These problems are by no means unique to amateur radio and, whilst I am sure there must be exceptions, it has been my experience that the risk increases as the size and influence of the organisation increases. This is the pitfall of which I am so wary: It is the one thing, above all others, which would lead members to be unhappy with their society.

I have now received the professional advice I have been waiting for and I am very much more comfortable with our prospects of success.

On that basis I can now confirm that the new society _will_ be formed and that, having considered such representations as have been made on the subject of its name, it will be called "United Kingdom Radio Society" (UKRS).

Arrangements for its incorporation are in hand. Professional Accountants and Solicitors have been consulted and are actively working in our behalf. Arrangements have been made with Yorkshire Bank plc for the safe receipt of monies and the provision of banking services to UKRS on attractive terms. All are aware of our intentions and, when the Certificate of Incorporation is received, the bank accounts will be transferred to corporate status (but with the same, helpful terms) and the retention of professional accountancy and legal services will be formally reaffirmed.

Since the conduct of the society will be prescribed by its Memorandum and Articles of Association, it is not proposed that a Constitution be drawn-up in the interim. The Memorandum and Articles are being drawn in accordance with the proposals outlined in my first bulletin, "The Monopoly Ends ...."

In fairness to the society's members, no further changes will be made until and unless they are deemed necessary by the members themselves and adopted at General Meetings called for that

purpose. Since it would not be fair to members to have non-members influencing the course of the society, non-members will have no further input to the way in which UKRS conducts its business on behalf of its members.

As is normal in these circumstances, colleagues who wish to join the society at this early stage may now do so if they wish. In recognition of their early commitment, those who join before the Certificate of Incorporation is received shall be known as "Founder Members" and that status will be reflected in their Certificate of Membership and throughout their membership in such others contexts as may be appropriate.

There is, of course, no reason why any member should commit to joining until he has had an opportunity to study the society's Memorandum and Articles of Association and no-one is authorised to persuade anyone otherwise. I am asked to confirm too that the only persons authorised to speak on behalf of UKRS at this time are Michael Mansfield (G2SP) and myself.

Those of you who have already declared your intention to subscribe as soon as UKRS is willing to register your membership should please note that your signature on a Membership Application form will be required. Such forms are available from the address below. Whilst by no means obligatory, it would help considerably if those sending for a form would please enclose a stamped, self-addressed envelope (9" x 4.5" minimum).

For those of you with printing facilities, an acceptable substitute has been uploaded in ASCII format to the UKRS topic of the CLIVE database in GB7OAR (file 11). It should be available anytime after 1800hrs today, 20th March 1996. Please feel free to print it (without alteration please) and use that if you find it easier. It must, of course, be returned with your subscription by landmail.

The file may be downloaded by sending an 'sp' addressed to CLIVE @ GB7OAR, with the one-word subject line REQUEST. The rest of the message should then be entered as follows, with each command on a separate line as shown:

```
TOPIC UKRS
SELECT 21
DOWNLOAD
NAME Yourname (If you have not used CLIVE before)
WHAT (If you want a list of other UKRS files)
BYE
Ctrl-Z or /ex
```

All subscriptions will be promptly acknowledged by a formal receipt issued in the name if the society. Membership Certificates and other relevant documents will be forwarded in due course.

May I take this opportunity of recording my very real gratitude for the constructive comments and suggestions which so many of you have sent to me. Our ambition now is to help UKRS grow so that, whilst remaining firmly under your collective control, it can become an organisation of trustworthy influence.

While I am able to influence its course, it will be my personal goal to ensure, so far as I am able, that UKRS meets the high expectations which we all share for it. We must have no illusions, however, that this can be achieved without your help. I shall try to ensure that your membership of UKRS is a pleasure rather than a burden but such high standards cannot be achieved by a few of us in isolation. UKRS will always need an input from its members and I can only hope that you will feel able to support its efforts on your behalf with the same enthusiasm you have shown for its creation ....

Please see also the bulletin entitled "As promised .... UKRS :-)" which contains further details.

Best wishes - and sincere thanks.

05 April 1996

United Kingdom Radio Society
==========

There seems to be an increasing level of interest - predominantly from non-members - in the size of the UKRS membership base and this is leading now to some rather less than complimentary bulletins being posted hither and thither.

Those of you who have been "packet-players" for the last two or three years at least will probably recognise some of the calls involved as being owned by OM who have a long history of posting

quite well thought-out and thought-provoking bulls .... only to post a diametrically opposed point of view a short while later !

Perhaps that kind of behaviour doesn't appeal to everyone but it does usually help us (if we don't jump in and polarise our positions too soon) to consider more aspects of a given argument than might otherwise have occurred to us and, maybe, even allow us to change our opinion occasionally. It does, therefore, have some merit.

My concern in mentioning this is simply that I wonder whether something as positive and inoffensive as a new national radio society should be used by amateurs as a platform from which to berate one another. Once bulletins descend to a "personal" level they achieve nothing and, since UKRS will do without reference to non-members whatever it feels may be in the interest of its members, there is simply nothing to be gained by falling-out among ourselves about it.

May I, therefore, please remind all interested parties of some of the original principles which we adopted ?

1. We sought to enquire what level of interest there might be - on packet alone remember - for the formation of a new Society so that we could "guesstimate" whether there was likely to be an adequately supportive interest from within amateur radio as a whole. We undertook to help start such a society if interest sufficient to make it viable was ultimately declared.

=. In a very short space of time, it became clear from packet responses alone that there was sufficient interest. Fortunately, the original enquiries had outlined a broad framework and that framework was accepted almost unanimously by those respondents who asked us to go ahead. We have therefore done so and have no further interest in debates about whether or not there should be a new national Society - there IS one and it is named United Kingdom Radio Society.

2. On the specific subject of membership recruitment: No attempts have been made - yet - to seek memberships from anywhere other than by recommendations from those who have elected to join as "Founder Members" and this is a very important point. It renders speculation about present recruitment levels totally specious and downright misleading because those OM who have joined have done so prior to our incorporation and as "Founder Members". It has no bearing whatsoever on the likely uptake of members once UKRS is formally incorporated and duly publicised - as it shortly will be.

=. If UKRS were a commercial company, the equivalent of "Founder Member" would be "Venture Capital Investor" - one who feels strongly enough in favour of the concept to risk a small

investment before he can even be sure there is anything substantive to invest in beyond the first ideas. We are not a commercial company and we have not asked for any investment, beyond the standard membership subscription, but the analogy is accurate.

With that in mind do you suppose that, when the Marks and Spencer retail chain was first mooted by one man trading from a wheel-barrow in a London market, a reliable prognosis of its future success could have been obtained from counting the number of people prepared to invest in his second and subsequent wheel-barrows before he even bought them ? Of course not. There is very much more at stake and there are far more reliable indicators of likely success.

3. We declared an intention to be responsive to members as an absolute priority and to hold the interests of members above those of non-members (if they ever differ) as a first principle. We have never undertaken - and do not now undertake - to respond to any bulletins if we do not for any reason feel inclined so to do. Whilst I would hope that UKRS will always respond to any enquiry addressed directly to it, by any medium and from any source, members' enquiries will always receive priority and if, occasionally, that means non-members must wait in line for an answer, so be it.

=. Some bulletin authors, however, imply that by not producing almost daily updates about recruitment figures - even when "provoked" by divers bulletins from non-members - UKRS is being secretive ! There is no secret, though it should perhaps be remembered that the only persons able to competently describe UKRS growth at present are Mike (G2SP) and myself.

=. If any person feels he needs to make any enquiry of UKRS, he should feel free to contact me or Mike (G2SP). I guarantee that if he has the courtesy to contact us directly he will receive in return a prompt and courteous reply and, if appropriate, the detail he requests. I specifically do not feel, however, that UKRS should commit itself to pumping-out endless updates of information which is of questionable value, in response to bulletins posted openly to GBR by people who, in the main, are not only non-members but who appear, at first blush anyway, to be overtly antagonistic toward its aims.

4. Repeated reference has been made in bulletins to comments by Founder Members, as if to imply that those comments should somehow be accepted as reflecting the view of UKRS. We have made it abundantly clear that, for the time being, no-one other than Mike (G2SP) and Greg (G0MAM), has any authority to speak for UKRS. Members are aware of this and seem to accept it: Perhaps non-members might remark it too :-)

IMMMMMMMMMMMMMMMMMMMM;
: Continued from Part 1 :
HMMMMMMMMMMMMMMMMMMMM<

=. UKRS members are as entitled as anyone to their views and have as much right as anyone to express them when and how they wish. If those criticising UKRS members for their views paid more attention to detail when quoting and paraphrasing them, it might be easier to avoid the unpleasant inference that they are really only trying to be mischievous. There might then be less need for offended members to fire-off so many well meant but stinging replies :-)

5. Comparisons continue to be drawn with RSGB. To some extent, this was always going to be inevitable but it may be rather less appropriate than many people realise. The same may be said for comparisons about the two organisations' respective membership figures.

=. There are said to be some 67,000+ UK amateur licences currently issued. There is a less easily determined number of SWLs who are also potential RSGB / UKRS members, as well as divers clubs / societies etc which might also affiliate with one or the other, or both. If we take even the modest figure of 100,000 as a total potential membership base for the two Societies, it must still be abundantly clear to everyone that UKRS has no need to deliberately interfere with the operations of RSGB which currently has as members only some 28,500 members of that total.

6. Concerns have been expressed that a second Society might weaken the ability of amateur radio to represent its interests to the regulatory authorities.

=. Whilst it is a reasonable point to ponder, it is actually untrue. Two Societies representing the same point of view will always have considerably more influence than one, even if the

total number of members being represented remains the same because the credibility of each will be enhanced by the support of the other.

Since both Societies claim to represent the interests of similar people - ie: radio amateurs and others with an interest in amateur radio - the occasions when UKRS might find itself needing to contest an RSGB point of view should be very infrequent indeed. As amateurs, we all have similar needs and, if those similiar needs are fairly represented, there should be no need for concern that UKRS and RSGB might be representing opposing interests.

UKRS is committed to ensuring that it _does_ represent its members' views. If RSGB pays similar attention to its own members, why should there be any conflict of interest ?

6. Many comments have been made about specific membership services and whether or not they will be made available by UKRS.

=. One of the founding principles of UKRS was that it should provide for its members those services which they want but for which they do not - for any reason - wish to be reliant upon RSGB. It follows, therefore, that as the UKRS organisation develops more and more services can and will come "on-line". Arrangements for a number are already in hand and are at an advanced stage. Within the near future, UKRS members will be at least as well catered for as RSGB members and, if current plans come to fruition, arguably better so.

The provision of a QSL Bureau is one example. At present, RSGB will already deal with in-bound QSL for non-members and members alike, provided only that they comply with the perfectly reasonable requirement to send pre-paid envelopes to the appropriate QSL sub-managers. The RSGB out-bound QSL service is, quite reasonably, restricted to RSGB members.

UKRS currently proposes, therefore, to provide an out-bound service for its members. It would be happy to provide an in-bound service also but, until and unless RSGB chooses to discriminate against UKRS members, there would seem to be little advantage in causing confusion for OM overseas who, when asked to QSL "via the Bureau", recognise one national UK Bureau.

We feel that proceeding this way not only shows that we are able to service our own members' needs but that we are also able - and willing - to consider how we might do so without unnecessarily affecting the enjoyment of our hobby by non-members at home and abroad.

Finally, a short personal observation. I recognise many of the authors of bulletins to UKRS @ GBR as OM for whom I have developed

a personal respect over a long period of reading their posts. It seems to me that, by accident or design, since UKRS was first mooted some of them have begun to move inexorably toward positions from which they might not easily retreat without embarrasment if events do not bear out their present opinions.

That would be a totally unnecessary and undesirable effect. Please gentlemen, can we all try to resist the temptation to pontificate and accept that, whatever _our_ view is, others may hold different views and only time will tell who was right and who was wrong ? Let's not let something as well-intended as UKRS be the root of further unrest within our hobby, even if we do not personally agree that it is needed ?

Mike (G2SP) and I do not propose to enter the public forum to correct misleading bulletins or criticise any man for expressing a view he holds to be accurate. We are concerned, however, that in the normal course of conducting UKRS activities we may be forced from time to time to assert something or other which will, inevitably, reflect poorly upon someone for whom we may have a personal respect.

Speculate amicably, by all means, but please try to avoid fencing yourselves or anyone else into a corner. At the end of the day, amateur radio is a hobby and we are none of us more important than the whole.

Best wishes,

Greg (G0MAM) @ GB7PMB

United Kingdom Radio Society
==========

Progress this week has continued to be very encouraging and although we are still not advertising our presence other than by word of mouth, packet and (to a lesser extent) the Internet, membership figures have already exceeded 130. In addition, we continue to receive enquiries and requests for application forms although, clearly, the numbers joining from the packet fraternity must inevitably plateau shortly.

We already have members from Northern Ireland, Scotland, England, Wales, the Western Isles, Guernsey and Jersey, and shall soon have our first members in Hong Kong, Australia and New Zealand - all within a fortnight of being formed. Credit for that kind of growth must go to those of you who have been spreading the news so keenly. Thank you :-)

Our Membership Application forms now include a space for new members to indicate whether they were introduced to UKRS by an existing member. As announced last week, the member whose name is most often quoted in that context will receive a token of our appreciation which will be a very worthwhile addition to his shack.

The leading contender to date has only three referrals to his credit so there is plenty of scope for any slow starters out there to catch him up ....

Reports have been received to the effect that the UKRS contact telephone number is often engaged when members are trying to call-in. At this stage, we can do little more than apologise for that and explain that the number in use is actually the home number of Greg (G0MAM). In addition to voice enquiries from members and prospective members, the line also serves for RAYNET enquiries, as well as packet traffic (sent by modem to GB7PMB), faxes and e-mail.

We are looking toward obtaining extra lines for dedicated UKRS use but members will appreciate that we do not wish to be profligate with funds which might be used equally well for other deserving purposes. There are suggestions that BT may shortly re-introduce last Summer's offer and install new lines at approximately one-third the normal price and so, if you can bear with us a little longer, we hope to save somewhere in the order of ukp160 + VAT. In the meantime, we will continue to monitor the stuation in case it becomes necessary to forego some part of that saving for the sake of efficiency.

In the original packet bulletin entitled "The Monopoly Ends ...", one of the proposals which attracted much support was that UKRS should be contactable from the outset by packet and e-mail. To date, this has been accomplished for packet by utilising the personal callsigns of Greg (G0MAM) and Mike (G2SP), and for e-mail by using Greg's personal e-mail address.

Neither Greg nor Mike have any objection to continuing for the time being to use their own calls on packet for that purpose and, indeed, doing so saves entangling UKRS in the conditions attaching to special and club callsigns etc.

On the e-mail and internet fronts, however, wider considerations apply because there are very real opportunities for UKRS to have a much wider presence in much the same way as ARRL does with its arrl.org address. We are pleased to report, therefore, that a new domain address - ukrs.org - should shortly appear on the worldwide scene and, parallel with that, appropriate pages on the World Wide Web.

If any member feels inclined to help old dogs learn new tricks by taking an interest in the development of high-quality UKRS WWW pages, please contact Greg (G0MAM) as soon as possible.

Still on the subject of e-mail, over a third of our current members already have their own e-mail address and internet access whilst others are known to be interested. We are pleased to be able to confirm, therefore, that members subscribing to the same ISP as UKRS will be afforded very attractive concessionary terms. It is hoped that this will help those interested to realise their ambition whilst at the same time widening the avenues of communication between the society and its members. UKRS has no financial interest in the negotiated arrangements and all savings, therefore, are passed on to the subscribing members. Details are available from Greg (G0MAM).

Next a request for help. Although we are restricting our activities as much as possible to those which cannot sensibly be deferred until the caretaker Governing Body convenes, we are still finding that there are not enough hours in the day ! We are struggling mightily to accomplish just those things which we judge most urgent and there are still other, very pressing things to be done.

If any members with basic typing skills and any kind of database programme could offer to help by undertaking some fairly boring, but nevertheless essential, copy-typing for us, they would be helping enormously. Please note that whilst the choice of database software is probably unimportant, a high degree of accuracy is essential. If you can help, please let Greg or Mike know as soon as possible.

One or two enquiries have been raised repeatedly during the past week and it may be useful therefore to post the following clarification:

Associate Members:
^^^^^^^^^^^^^^^^^

UKRS has not set a lower age limit for members and, as things stand, all members receive the same benefits with only one

exception: Members aged under 18 years are not allowed a vote at AGMs etc. This is a ramification of the Companies Acts and does not in any way devalue the status of our younger colleagues. The term "Associate Member" has been applied to the under 18 age group as a matter of simple tradition but all such members pass automatically to full "Corporate" status immediately upon their eighteenth birthdays. UKRS is happy to reaffirm its commitment to encouraging young people into and within our hobby and, beyond that, is already making progress with plans which will benefit them - and the Society - on an unprecedented level :-)

Affiliated Societies:
^^^^^^^^^^^^^^^^^^^^
The number of enquiries received about whether or not UKRS will welcome clubs and groups to affiliated membership suggests that we have not previously made ourselves clear on that point and for that we apologise. It was always intended that clubs and groups which sought to join us should be made welcome and we already have some on board. The annual affiliation fee is ukp15 and this is not mentioned on the membership Application form because there is a separate Affiliation Application form for that purpose. Affiliated clubs and groups will expect the "usual" benefits of affiliation and it is hoped that, subject to input and feedback from such affiliates, those benefits may ultimately be increased further.

It is no secret that very large numbers of amateurs, whethGB members or not, are becoming increasingly unhappy about what passes these days for RSGB service.

Recent events in which I have been involved personally have led me to consider in some detail just where it is that we, its members, find the Society falls short of our expectations and what, if anything, might reasonably be done to improve matters.

Let me say straight away that I acknowledge the thousands of Society members who are apparently happy with the Society as it is. Indeed, I wonder whether it would even be fair (assuming it were possible) to inflict upon them the kind of radical changes which seem to be necessary to satisfy the rest of us.

Natural justice suggests to me that it would not be fair and, furthermore, common sense tells me that there is no realistic prospect of any significant or lasting change being made anyway.

The root of the problem seems to me to be that those responsible for managing the Society - its Council members and some of the Headquarters staff - have lost sight of the fact that our national society should exist to serve us and *not* the other way round. Members of Council change in such small numbers when they change at all, and so many Council members are re-elected when the mandatory period "in exile" is over, that attitudes seem

impossible to change.

Worse than those attitudes are the very real worries felt by many of us that the Society appears to be negotiating for itself far too many of the powers more properly exercised by the RA. Add to that the fact that so many questions remain unanswered, even when asked directly and/or publicly, and it even becomes difficult to hope that such worries are based on rumour. So little information is shared with us and rumours are so seldom properly rebutted.

I have reluctantly decided that the RSGB is of scant value to me as an individual and is, in fact, a liability in many respects. More importantly, it seems to be a positive threat to the majority of us who use packet and those of us who provide emergency communications. Other "specialist interest groups", such as ARDF, are routinely disadvantaged because, apparently, they are not "big enough".

Having watched carefully the bulletins on packet, and the postings to uk.radio.amateur on the Internet, and having spoken at length to scores of frustrated members, I think many of us have come to

4. There should be no Headquarters building, as such, until the size of the organisation and complexity of its operations justifies the expense, at which time administrative offices only should be obtained. Such offices should then be located sensibly, having regard to the motorway / rail infrastructures for members' access, and should avoid unnecessarily "high cost" areas.

5. The main postal address of the new Society should be a Post Office Box number, to facilitate non-disruptive re-location when necessary.

6. As many of the Society's services as possible should be made available locally - ie: via the Elected Members - although all should also be available when required from the administrative centre.

7. There should be no salaried staff until the size of the organisation and the volume of administrative work involved necessitates the employment of full-time administrators (ie: clerks) to assist - and be responsible to the membership via - the Management Team and Elected Members.

8. To mitigate administrative costs, the Management Team, Special Interest Advisers and Elected Members should maintain close and regular contact by electronic media where possible, as well as telephone and landmail. Equipment necessary for that purpose should be available "on loan" to those required to use it and should be subject to return or replacement when directed by the Management Team (eg: when an Elected Member steps down, is relieved or fails to be re-elected).

9. The new Society should be contactable from day one via packet and E-mail, as well as by telephone and landmail.

10. Annual subscriptions should not exceed ukp15 for the forseeable future. Subject to the views of members, it may be possible to offer reduced subscriptions to minors, those aged under 21 years and still in full-time education, and those in recept of certain State Benefits. Family membership could be considered for members living at the same address. There should, however, be no free memberships.

11. All correspondence from members should be acknowledged within 48 hours of receipt and dealt with completely as soon as is reasonably practicable. Where such correspondence needs to be passed to someone other than the addressee for action, the member's acknowledgement should show clearly to whom the correspondence was passed, when and by what medium. The individual to whom it is passed should also acknowledge receipt, both to the member and to the person referring it to him. For the member's convenience and to ensure that the correspondence is not "overlooked", it should be the original addressee's responsibility to ensure that it is dealt with within a reasonable timeframe.

12. Since it would no longer be possible for the RSGB to claim to represent "all amateurs", nor negotiate in isolation with the regulatory authorities, the new organisation should be prepared to liaise with the RSGB (so far as the RSGB may be willing to reciprocate) but, in the case of conflict of interests between its members and any other party, the new Society should, without exception, represent the best interests of its own members.

My own strengths, if I may claim them as such, lie in organisation and admnistration and I cannot claim to be an expert on any one area of our hobby. It follows, therefore, that this initiative can only succeed if a sufficient number of you agree to support it AND if a sufficient number of you are prepared to accept some responsibility, either as Elected Members or as Specialist Advisors in the fields of your own expertise (eg: planning, packet, repeaters, ARDF, ATV, EMC etc).

It has already been suggested to me that the new society should welcome membership applications from our Citizen Band friends and I tend to support that view. Many of us entered the hobby via Citizens' Band radio and, when all is said and done, the only real differences between us are the availability of our respective licences and the frequencies which we are allowed to use.

I should also add, perhaps, that some existing and previous members of the RSGB Council have already indicated their support for a new organisation. Clearly, however, some resentment may be expected from others and from some RSGB members who may be happy

with the status quo.

May I say again, therefore, that the purpose behind this initiative is simply to provide for members that support and representation which they seek, together with such services as the members deem necessary, without making any further attempts to inflict such change upon those who are evidently satisfied with the benefits of RSGB membership. It is specifically NOT intended to generate a "range war" between amateurs. Alternatives have been tried and have failed - it is surely reasonable for us now to look at this solution too.

Please let me have any comments you may wish to make, as soon as possible, by packet, e-mail or landmail. I would be particularly keen to hear from anyone who would be willing to help start the ball rolling by offering his or her services as "Specialist Advisor" in any of our specialist interest groups.

The idea is rolling now - it is no longer an "if only ...." Further details will be posted as soon as they are available but please remember - this is NOT something which can succeed if we all assume someone else will act: we do ALL need to have a say and all comments received will be influential. In view of the likely volume of response, however, it may be impractical to promise individual replies at this juncture.

Finally, a name ? Preferred among suggestions received so far is "United Kingdom Radio Society" - UKRS.

Best wishes,

Greg (G0MAM) @ GB7PMB

His questions remind me of a selection board I faced many years ago. As
part of the process I went to dinner with the board members and one course
was cherry pie (including the stones). They were very interested to see how
we dealt with the stones.
Easy enough really, I just swallowed them.

Back to the challenge. My questions Rick, should be very easy to answer.

1. Did the RSGB consult YOU about whether you agreed with the test and if
it should be scapped?

2. Is the DCC consulting you (or any of the Yorkshire sysops) as to the new
NOV being discussed with the RA?

3. Which Raynet members in your area were consulted by the RSGB before they
sacked Greg, G0MAM the ECO?

4. When the Rr 208
SGB through its Licencing Advisory Committee negotiate with RA
for changes in our licences, how many times have they consulted you (or
any amateur you know)?

5. Has the RSGB EVER asked you for your opinion about their policies?

Easier than ticking boxes.

As you rightly said in your bulletin, the New Society should be led by its
members and not the other way round. Although in a democratic society, the
wishes of the majority decide the policy, minorities must be considered.

I have of course missed one question out, and it is a question that every
RSGB member can consider:-

When was the last time the RSGB asked YOUR opinion about ANYTHING?

73, Mike G2SP@GB7NOT

Hello Packeteers,

Over the last few days I have read with great interest the bulletins
regarding UKRS. After reading the initial bulletin from Gregg, G0MAM,
I
have already sent some comments to him but as most stations seem to be
sending bulletins I thought I would join in.

I will refer to the society as UKRS in this bulletin as I feel it is
the
most suitable name. I agree with G8AMG about GBRS being too much like
our
competitor, but like his term of "gravy drinkers",

Concerning the subscription fee I think 15 is about right, however I
feel
that reduced membership fees should also be made to long-term
unemployed
who do not fall into the other categories. I myself fall into that
position but that is not my reason. Anyone who has been unemployed for
a
long period of time will understand the difficulties of raising fees
for
licences, subs, etc for a hobby with which can help keep your sanity
while
looking for employment.

I feel that the original idea of UKRS is an excellent idea and it is
up to
us, the future members, to ensure that it grows from strength to
strength
while still keeping to its original aims and objectives. I am sure
that

those that are going to be involved with the running of the society realise that the task is enormous but that they wish to contribute something back into the hobby and I personally feel that this is not possible with the "Really Selling Greed Boys". G0ULL made comments about
business plans etc, surely, as Ernie G3ZXN suggests, we need to decide on
our aims and objectives of the society first of all. If he is experienced
in this area perhaps he could give the society some help in the future.
Surely before any plans are drawn up we need to have an idea of our expected membership. It is my hope that, unlike the RSGB, UKRS will base
its expenditure upon income not upon requests from senior commitees for
comfy offices, perks, radio shacks, museums, etc.

As for the points made by Don, GW0PLP, I am sure that when enough feedback
has been received from members-to-be, a steering commitee will be appointed to construct a constitution. Personally I believe that in the
unfortunate collapse of the society all outstanding monies should be given
to charity. No member of the society should have financial ties with the
organisation and external auditors should be appointed as soon as is poosible. One of my main concerns is that UKRS does not become like so many other organisations and charities, whereby a large percentage of funds is spent on administration. Don says that it would be a risk to spend money on UKRS. What risk is there for putting 15 into an organisation that will work for YOUR INTERESTS. These services are not available elsewhere - the UKRS will be a truthful, open society that will
keep its members informed on all matters.

Like many others I am also against the diamond shape for the society logo.
I am not artistically minded but how about a collection of diamonds linked
together forming a network with each diamond showing an aspect of UKRS.
Maybe some computer artists would like to look at some designs and send
them out as 7+ files - but don't flood the packet system. I think that the
idea from Ernie, G3ZXN, is on the right lines but just amateur, CB and SWL
does not really cover the full spectrum of possible members. I am sure there will be interest from scanner enthusiasts, broadcast listeners,

weather satellite stations and radio astronomers. If we are to become a
true RADIO society I feel we must accept all of these people along with
their comments and information.

Regarding the views made by Laurie, G0LLP, I personally believe that too
much emphasis is put on the term "amateur". When one looks at the
achievements our hobby has made in terms of satellites, datacomms, etc you
can hardly call it amateur. Most ACTIVE amateurs want a better national
society, un-active amateurs are only happy with the RSGB because they
believe that they are kept up-to-date with events in the amateur radio
world. Also, not everybody finds Technical Topics interesting, I know of
amateurs that only use RadComm for adverts, contests, etc. In the
technological (throw-away) age of today do we really need to build
equipment. I am not at all technically minded but I still see myself as
proud to be a radio amateur. I am not knocking those that are, but I would
rather operate than build. Laurie says about the society working with the
RSGB, I feel that we should keep well away from them, it is the RA, IARU,
WARC, etc that we need to be working with.

I can understand the comments made by John, G4VWL, but UKRS MUST only
support LEGAL CB. Like us, CBer's are using radio communication as a hobby
and I feel that we would only attract those users that see it as such. If
a CB enthuasist approaches RSGB I am sure that they are not given a lot of
help. With UKRS those that are interested could learn about propogation,
RFI, antennas, operating techniques etc and this would hopefully encourage
their progression into amateur radio.

So long as it does not cause too much disruption to the network what is
wrong with getting initial opinions and information from the packet
metwork. This mode is very useful for people like myself who are very
interested in current matters but could not afford the cost of travelling
the country to attend meetings.

The above bulletin was prepared upon my own opinion but I would like
to
here comments from any station either in personal messages or
bulletins.
Anything I receive I will also pass on to Greg, G0MAM.

08 March 1996

On "Steering Panels":
~~~~~~~~~~~~~~~~~~~
I read with some concern an early suggestion that we should set up a "Steering Panel" which, I noted, would meet and discuss the way forward.

All I have done, to date, is to suggest that I would like an alternative to the RSGB and, so that fellow amateurs might help me decide the viability of forming one, I added an outline of how I thought we might begin. I undertook to play a pivotal role if the idea found favour with enough of you, provided only that some essential safeguards were built-in in order to prevent the new society "going off the rails" as time passsed.

Having outlined a proposed way forward, it seems to me that if potential members have aligned themselves with those proposals and offered their support, there is nothing to "steer". It behoves those who take the idea forward to set in place that which has been agreed, not to meet in committee, discuss options and present something different, no matter how well intended.

If we go ahead it would be my intention, therefore, to form the society along the lines I described, leaving it to the members themselves to determine directly what changes and refinements, if any, they wished to see.

In the meantime, we have on obvious and urgent need of volunteers to accept responsibility as the fore-runners of "Elected Members", preferably one for each county and Scottish region. Once those members have helped set in place a competent framework, and the
~~~~~~~~~~~~~~~~~~~

new society is on its feet, we can then look to organising elections which will either confirm them in post or replace them.

Between now and then, of course, we would also need to spread the news as far and wide as we can, so that as many colleagues as possible would have an option of joining us if they wished. This is something which we can all be doing, even now.

Following the bulletin which mentioned "Steering Panels", I have received only two messages which referred it and one of those was strongly against the idea. If it is inappropriate of me to take such a view of panels and committees at this stage, please let me know. In the absence of any such comment, I shall continue with the arrangements I have made with regard to taking professional advice about the best way forward and report further when I have done so.

Best wishes,

Greg G0MAM

6242. rsgb nearly 10,000 fall in membership

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-27 00:00:00 UTC
From: bert@skypilot.demon.co.uk

RSGB membership falls by nearly 10,000 in the last 9 years

The highest membership of RSGB was 1987 with over 37,600 members
now it is down to 30,600 a loss of nearly 10,000 members in 9 years.

The loss is over 1,000 members per year for the last 9 years
with a loss of revenue of around 330,000 pounds (10,000 X 33).
June 1996 28,500 reported one packet
June 1995 29,805 Latest figure in May 1996 radcom.
June 1995 30,661
June 1994 30,916
June 1993 31,018
June 1992 32,416
June 1991 34,581
June 1990 35,225
June 1989 35,868
June 1988 36,809
June 1987 37,601

The latest membership figure was not given at the 1995 agm
due to 'an oversight....' this has never happened before.

73 ian

P.S. In the 1995 RSGB Annual Report Peter Kirby G0TWW RSGB General
Manager
states 'Membership has shown a modest increase....'
thats news to me, I thought 30,661 was a decrease from 30,916!

[End of message #73494 to UKRS from G4WJR]
Msg #73412 Type:B Stat:$
To : UKRS @GBR
From : G0KIU
Date/Time : 02-Mar 22:23
Message # : 73412
Subject : Re: A challenge for the UKRS!!!
Path: !GB7BAD!GB7NOT!GB7MAM!G0KIU!

Interesting that Rick G4BLT should come up with what he considers to be a
difficult question for folks to answer.

This question has been posed so as to create discord amongst the
disenchanted Members and ex-Members of the RSGB. In the words of a TV Prime
Minister "You might say that, I wouldn't"

In the lates '40s and the '50s I was involved in politics. Amongst other
items in the training that was given tome by the party was this little
Gem:-

Party HQ expected selected members to attend the opposing parties Public
Meetings and will be provided with embarassing questions that are to be
asked!

Now you might think that Rick's question is a similar idea, I would not
dream of so doing!

However, just to show that there is an answer to this question :-

When a Constitution is drawn up and approved, then the method of settling
such questions should be included. If in this Country we believe in
democratic resolutions to problems, then there is only one way and that is
by a referendum and that the result should be accpeted by either side as

befits a Democratic Society.

If the problem in question is asking for a first time decision
then a
simple majority is obviously the answer. However if it is to be a
change in
policy or a section of the Constitution then maybe it has to be a
2/3ds
decision of either the votes cast or of the total number of Members.

This is just one of the many things that will need to be ironed out
for the
initial Constitution.

You will notice that Rick drags up the Morse issue, deliberately
trying to
cause a problem with potential recruits to a new Society. Does he
have a
vested interest in doing this ? Perhaps we might get the answer to
this, or
maybe a political answer which skates around the question!!!

NO MATTER WHAT YOUR THOUGHTS ARE ABOUT ANY OF THESE TYPE OF RSGB
SUPPORTIVE
QUESTIONS MAY BE REMEMBER ONE THING :-

THE RSGB DOES NOT ASK YOU FOR AN OPINION.

THE RSGB IGNORES ANY REQUESTS FOR INFORMATION REGARDING THEIR
ACTIONS OR
FUTURE ACTIONS.

THE GAGGING THAT OBVIOUSLY GOES ON FROM ON HIGH WILL REMAIN,
BECAUSE IT IS
NEXT DOOR TO IMPOSSIBLE TO CHANGE THE SETUP.

THE RSGB IS AKIN TO NERO, THEY FIDDLE WHILE THE RSGB FALLS INTO RUINS.

(Just in case some high and mighty person considers that libel,
FIDDLE =
playing around with a violin or in the RSGB case chanting some other
Swan
Song!

I must give Rick his due in one respect :-

>1. To any prospective 'officials' (servants?) of the UKRS.

He admits that the hierarchy of the UKRS could actually be the
servants of
the Members. That would be a novel change for a National Society in
UK!!!

He goes on to say :-

>Of course, the cop-out to part 1 would be simply to do nothing, in which
>case both camps will be alienated.

May be, but when did the Society that Rick obviously supports, EVEN
BOTHER
TO ASK FOR OPINIONS or TAKEN NOTICE when they were gratuitously given.

Later :-

s. I would geniunely like
to
>see if anyone has an answer to the dilemma; if they do not, then maybe
>UKRS will be stillborn.

Hoping for a Stillbirth Rick ?? !!! Is that what you want rather
than
something better? Still nothing could be worse and if its cheaper
that
would be an improvement.

Finally :-

>As for me; I enjoy the usual love-hate relationship with the RSGB! ;-)

Of course you do, so long as there is no opposition to get things
changed.

Having given up the RSGB because of their failure to respond to my
letters,
I know longer know if G4BLT writes for RADCOM. I wonder if he does
and if
he does then are his questions an attempt to wreck a new Society ?

You might say that, but I wouldn't !!!!

Extract from RSGB Main News for Sunday 3rd. February.

"Council has not been and is not engaged in any negotiation with
R-A-E-N,
but can see no reason why we should not co-exist peacefully."

Last year Joan Heathershaw G4CHH was in discussion with the Chairman
of
R-A-E-N about the role of the RSGB ECO.

Who was she representing, and to whom did she report?

According to the RSGB News, this was not a Council initiative so on
whose
authority has she been acting?

Joan Heathersaw was appointed ECO when the current RSGB President
sacked
G0MAM last August. Her appointment had to be withdrawn as it broke the
Society's own rules.

73, Mike G2SP@GB7NOT

Extract from RSGB Main News for Sunday 3rd. February.

"Council has not been and is not engaged in any negotiation with
R-A-E-N,
but can see no reason why we should not co-exist peacefully."

Last year Joan Heathershaw G4CHH was in discussion with the Chairman
of
R-A-E-N about the role of the RSGB ECO.

Who was she representing, and to whom did she report?

According to the RSGB News, this was not a Council initiative so on
whose

authority has she been acting?

Joan Heathersaw was appointed ECO when the current RSGB President
sacked
G0MAM last August. Her appointment had to be withdrawn as it broke the
Society's own rules.

73, Mike G2SP@GB7NOT

The Six Phases of being a member

Enthuiasum.... = a new member
Disillusionment.... = an old member
Panic..... = council member
Search for the Guilty..... = the manager
Punishment of the Innocent... = the ECO
Praise and Hounours for the non-participants... = the president

Now I bet you know another company that this applies to..

Well well well! So Mike, G2SP, purports to know who my source for the
figure of 100 letters received at Potters Bar is or was. What a pity
he

did not read what was written. My figure was for the letters
rececieved AT
POTTERS BAR (RECEIVED!) not elsewhere. That was the point I was making
that a large, but unknown to me or my sources (plural and not
including
the person he suggests) where received by the President and IPP. No
doubt
other Council members had their ears bent as well. What I would like
to
know, and have been unable to establish, is exactly how many were
received
in total. Based on past experience I very much doubt if there were
more
than two hundred all told. Hope this puts the record straight.

The second point I would like to make is to nail the myth that the
RSGB is
undemocratic and cannot be changed from within. of the 30,000 or so
members
no more than 10% ever vote in elections for Council. If the other 90%
or
even 20% of them wanted they could easily unseat Council.The other
hurdle
is the number of votes needed to call an EGM which is currently 500.
Just
ask G4AJJ and G3GJW who tried to get 500 votes how difficult it is.
For
this reason alone I believe the UKRS will fail to attract significant
membership.

Hi All,

Some two weeks ago I sent out the following bull regarding the calling
of an EGM. I've had several requests for a note of the present
position. To date I've had 25 write agreeing with my actions. I've
also written to Practical Wireless, Ham Radio today and Radcom (I am
still an RSGB member and it will be interesting to see if they print
it). I had hoped for more but I've had many packet messages to say
people would support me but they had already resigned!!

I will endeavour to get the requisite number and if you are of a like mind then please send me your letter and spread the news.

Thanks.

Regards Roger G8XAN
(Raynet and RSGB Member)

~~~~~~
Hi All,

Having read the bulletin from Mike, G2SP, and spoken to Greg, G0MAM, I am disgusted at the treatment that Greg has received. I lay the blame for this squarely on the shoulders of the present President Mr Sheppard, G4EJP, and with this in mind I intend calling an Extraordinary General Meeting with the purpose of passing a vote of no confidence in the President of the RSGB and asking for his resignation.

To do this I will need the support of 499 other corporate members. If you feel the same way as I do could you please write to me at:

Roger Woods G8XAN

Stating:

****

Dear Sir,

I fully support Mr R B Woods, G8XAN, in calling an Extraordinary General Meeting with the Sole purpose of passing a vote of no confidence in the existing President Mr Sheppard, G4EJP, the motion will be:

" This Extraordinary General Meeting has no confidence in the President of the Radio Society of Great Britain, G4EJP, Mr P R Sheppard and calls for his immediate resignation."

Yours sincerely etc.

11 March 1996

Gentlemen, please !

.... and I use the term "gentlemen" for I have seen no bulletins here from the ladies.

At the risk of causing offence - which I assure you is not my intention - may I ask you all to remember what started this debate and ask you to relax a little ? Please ?

I asked for some feedback on an idea which I thought might be useful. You've all responded marvellously and I have exactly what I asked for - not just support, but FEEDBACK. Come on lads, that includes the negative view as well, doesn't it ?

The last thing I wanted to do was provide another excuse for folk to start criticising one another. Obviously there are strong feelings abroad. I've got a few myself if it comes to that but,
~~~~~~

seriously, what does negative or spiteful criticism achieve ?

There have been some extremely relevant postings to UKRS @ GBR and I do most definitely include the "negative" views in that observation. There has been an increasing number of facile postings too. Just as this important issue was demonstrating how, when something serious crops up, we can discuss it sensibly the needling creeps back in :-(

While I'm presuming thus upon your good nature, could I make another couple of quick points ?

First, the formation of a new society is intended to be a POSITIVE action, something to fill a need which a number of us apparently perceive. It is specifically NOT intended to be a NEGATIVE action to knock RSGB or anyone else. That's why we're thinking about forming the new society in the first place, isn't it ? To provide something new and positive WITHOUT forcing change, much less criticism, upon colleagues who are evidently happy with what they have already.

Second, when it's occasionally necessary to explain to someone why we are unhappy with RSGB, or don't want to try again to "change it from within", there's no need to start adding sarcasm and vitriol, is there ? Not everyone has had unpleasant experiences of RSGB and some folk will be upset enough, or puzzled enough, by what we are proposing to do without us deliberately "adding insult to injury".

Sorry to carp so but I do find myself wondering: If bitterness is going to creep in now, while we are on the brink of such a major and positive step, what kind of struggle lies ahead for those of us who do NOT want to see the sort of OM -v- OM bickering which, for example, attached itself to the RAYNET divide of 1991 and is still smouldering to this day ?

There is no need for anyone to justify his thoughts fellahs, much less squabble about them. If enough of us agree to form a new society, we will do. It is inevitable that some of our friends will disagree with us and maybe even wish we wouldn't. Let's at least stay friends .... we're ALL entitled to a view and it would be a poor auld world if those views were all the same.

Whinge over. Soapbox to let :-) Thanks.

08 March 1996

On 7th march, Peter (G6JNS) apparently posted the following
to RSGB @ GBR:

==========
Sources not a million miles from Potters Bar suggest that the ECO
and his supporters have been very economical with the truth. They
further suggest that the ECO made a number of ludicrous demands at
the recent meeting with RSGB. Can anybody throw any light on this?
If, has been suggested, the Society libeled the ECO then it
beggars belief that he was not accompanied at the meeting by his
solicitor. A statement in Radcom is expected shortly.
==========

Awright Guv, it's a fair cop ! I am undone ! I confess.

I have indeed been economical with very much more than the truth !
There is so much I have not told you ! Here I am, sat sitting upon
so much data which of course I should have released. Fancy
revealing only the bare bones and upsetting all those very
important gentlemen so ! I am wretched with remorse !

Selfishly, instead of serving upon my fellow man the
corroboration which my account of events so richly demands, I have
clutched it closely to my bosom, the better to protect my own
selfish ends for when I appear before the learned, some would say
grand, gentleman who shall pronounce the extent of the porkies
told about me but who, 'tis said, takes ye very grand exception to
not being the first to read such tales.

Bad of me, I know. I realise now that I should not have listened
to the clever gentleman who makes all that money advising wretches
like me how to go forth and shamelessly extract satisfaction from
their very much betters. I am gobsmacked that I had not earlier
seen the error of my ways. How very coarse of me to want to
defend my name ! What's in a name after all ?

How shall I bear it if the truth should ever leak out ? There
shall surely be so much egg on so many faces that my very much
betters may resemble the feathered ends of careless hens. Who,

I wonder, shall be blamed for THAT ?

But enough: I have seen the light and indeed, I do unreservedly wish my very much betters all that they so richly deserve.

Now that I am cured of my innocence, of course I accept that it's their ball and it's up to them who plays in goal. Of course they should proclaim their innocence, for if they will not who will ?

Besides, that nice man I mentioned has already told me not to be upset. He says he can't make them let me play, but if they don't know the rules who wants to play with them anyway ? AND he says I'm going to get a lot more pocket money from somewhere and that's bound to make me feel better. He says why I don't I just buy my own ball and find some nicer friends and then it won't matter who plays in goal. Nice man really. Made me feel lots better.

Only he won't let me tell tales. Not yet. "Be good", he says, "or I may not get you any pocket money after all".

A word, however, for the wise:
~~~~~~~~~~~~~~~~~~~~~~~~~~~
Take care, Peter, that this is a game you want to play. This time, your mole has crawled very close to the flame and he has taken care, I promise you, to ensure that he is covered by the Society's insurance policies. You are not. He can be perfidious in the extreme. Are you absolutely sure that he knows what he is talking about (for that was not our impression), and that he treats you fair ?

Are you being used - again - to weigh the opinion of our peers, or just to vent his spleen ?

All _will_ become clear in time and this, I promise you, is one mistake which will _not_ be lost in the mists of time. The schoolyard bullies have finally picked the wrong 2nd year to taunt.

Humour is fine but do you _really_ want to jeapordise your hard won reputation for spilling truthful beans, by taking sides when neither you nor, for that matter, your myopic friend have yet seen the evidence or heard the full story ?

Someone has been telling you porkies, auld son. I know - I was there with my recorder :-) Bad, bad boy :-)

Remember this message .... I shall and, being only human, I may yet return to gloat :-)

Yours etc

Disgusted of Cheshire

08 March 1996

On Discounted Subscriptions:
~~~~~~~~~~~~~~~~~~~~~~~~~~
In my original bulletin, I outlined a suggested framework of subscription rates which I thought, subject to your approval, might help us to start the ball rolling. They were only my own thoughts and, as such, were subject to revision. It has become clear from your responses, however, that they have been accepted as they are and so, if we go ahead, we shall probably do so with those subscription levels. We can always revisit the question of subscriptions later if that is the wish of members generally.

Some points have been raised, however, which should perhaps be addressed before anyone actually commits to joining.

The first concerned what one contributor described as the "topsy turvey" way of doing things. He felt that it might have been better to establish what the new society's financial requirements were before deciding on appropriate subscription rates. Fair comment, in a commercial sense. We are fortunate, however, in that we are not required to fund large stock purchases or production processes. Our immediate fund requirements are much easier to assess, especially if we are agreed that we need not employ paid staff for the time being and will not require formal office accommodation.

Like every business, the new society would need to "cut its coat according to its cloth", and maintain careful controls on expenditure, but it is possible for us to predict "start-up" costs and to determine that operating costs will rise in relation to the increasing membership. The suggested figure of ukp15 was reached after careful consideration of those issues and in the knowledge that, if services required by members should exceed predicted cost levels, full disclosure of the details would enable the members
~~~~~~~~~~~~~~~~~~~~~~~~~~

themselves to decide whether to increase the subscriptions or economise on the services required.

Three questions have been raised, which were not satisfactorily addressed in my original bulletin and I therefore expand upon them now. It is probably not necessary to reaffirm your agreement but, if you disagree with the following, please do either raise the issue in a bulletin to UKRS @ GBR or contact me directly.

The first concerned mature students. I had originally thought that their position was catered for when I suggested that fulltime students upto the age of 21 years might qualify for discounted subscription rates, and that discounted rates be available to colleagues in receipt of certain State Benefits. Although I did not offer an exhaustive list of such Benefits I was comfortable in the belief that eligibility for State Benefits might qualify any "needy" applicant for discounted subscription rates.

I have since been asked to consider a situation, however, where a mature student does NOT receive any State Benefits because he has a small amount of savings. This raises an interesting question because, if we are to introduce the consideration of folk's savings, I am not sure that we could justify being quite so intrusive and, even if we could, how would we establish whether an applicant had truthfully declared them ? On the other hand, there may very well be cases where a mature student genuinely is in some financial difficulty but does not qualify for State Benefits.

The best suggestion I have been able to arrive at is that we allow for the application of discretion. If a potential member objects to providing sufficient information to enable us to determine his eligibility on a case-by-case basis then he either pays the full subscription or, perhaps, decides not to join. If he is happy to do so, perhaps we could allow him to make a case for the discounted rate ?

I am not entirely comfortable with this arrangement but, given the anomalies which might occur, would prefer to take some responsibility for applying discretion than to high-handedly say there can be no exceptions.

The second question concerned "free" membership for people registered as disabled. I had suggested that there should be no category of "free" membership and I am entirely happy with that. No-one has objected to it and there has only been one query.

My own view is that disablement itself is not a reliable criterion for determing whether or not someone can afford to pay a membership subscription. Many "registered disabled" receive divers State Benefits and are, in truth, rather better off in financial terms than their able-bodied peers, notwithstanding that their Benefit payments may actually have been intended for other

specific purposes (eg: mobility, carer allowances et cetera).

Lest I be accused of insensitivity to the needs of the disabled may I add, for no other reason than to validate my opinion, that I am myself registered as "significantly disabled" and have a wife and four children to support, as well as what they rather unkindly describe as my "amateur radio and revolting tobacco habits".

Unless enough of you have serious objection to my proposal, therefore, I would anticipate offering members who are in receipt of one or more of the "disability allowances" the discounted rate of subscriptions but not free membership.

The final question concerned senior citizens. There is an increasing tendency in Society today to offer concessions to senior citizens but, as has been pointed out to me, most of us know senior citizens who are wealthier than we shall ever be as well as others who have acute financial difficulties.

This is a subject upon which I would appreciate some feedback. My own feeling is that the discount rate should be _available_ to senior citizens, if they wish to take advantage of it, but that it should not be applied automatically. This might allow those who prefer to do so to pay the full subscription (have you decided to go forward
with ukrs
and yes, many of our
elders do still have personal pride and a sense of honour) whilst helping those who cannot afford the full rate.

If anyone has views which differ from those which I have expressed above please let me know, either directly or via a bulletin to UKRS @ GBR. If no significant objections are raised, I would anticipate amending my original proposals to accommodate the above changes.

We need to decide these issues fairly promptly although, as with everything else, we can fine-tune the arrangements later if necessary. I am concerned primarily to ensure that whilst we do have a realistic attitude toward subscriptions, we do not needlessly cause embarrassment to any of our colleagues by prevaricating.

Best wishes,

Greg (G0MAM) @ GB7PMB

On Flood Complaints:
~~~~~~~~~~~~~~~~~~~
Some of the contributors to UKRS @ GBR have very sensibly
suggested that an alternative to forming a new society might be
for anyone who is unhappy with the RSGB to write in and say so.

One particularly interesting suggestion, albeit "tongue in cheek",
was that those of us currently in favour of forming a new society
might do well to consider pooling our resources, make a
concerted effort to oust the present management of RSGB and work
toward having our own candidates elected in their places ;-}

Although such suggestions appear to have provoked a rather
negative response, I really do believe they were generally quite
sensible and, certainly, they offer a nice alternaive to all the
work involved in starting again "from scratch".

Those who kindly offered the suggestions, however, may not have
considered two factors at least one of which, though painfully
obvious to same of us, may not be general knowledge.

The first is simply that there are thousands of our fellow-
amateurs who are apparently happy with the RSGB as it is. There
are very many of us who are apparently agreed upon the need for
fairly sweeping changes. If we were to achieve those changes, by
whatever means, we would effectively have forced them upon RSGB
members who evidently do not want them.

In all probability, whilst we were satisfied with our
achievements, those who are happy with the status quo would be
most disgruntled by the change. Would that really be fair of us ?
Better, perhaps, that we leave the RSGB as it is for those who
like it that way, and accept the extra work involved in making our
own arrangements.

The second is, unavoidably, a serious condemnation of the RSGB.
Its response to members' letters has been the subject of growing
criticism for several years but is often dismissed because
specific details are not available. This is no longer the case.

Since Augusdo you like geoff's idea of taking a 'notice of intent'
t last year, hundreds of members have written to the
~~~~~~~~~~~~~~~~~~~

Society's Council members, via Headquarters and directly, and complained "in unison" about the same subject. The majority of those letters were written on behalf of numerous others by their Chairmen and the number of members' views being represented, therefore, ran into thousands. None of those complaining has yet received a satisfactory response. Worse, such responses as have been received have almost all been the same "form letter" dated 4th August and signed by the General Manager, notwithstanding that the letters being acknowledged may not have been written until November and may have been addressed directly to Council members !

One Group, rather than have its Chairman write on its behalf, asked him to photocopy the letter and distribute copies to each of them so that they might sign their own copies and forwaryour bull about g6jn
s was well written
d them
individually to RSGB Headquarters. They reasoned that this should show their collective feelings more credibly than having one man write the letter and sign it in their behalf. The RSGB derided those letters particularly, and chose to discount them on the basis that "they were just photocopies of the same letter" !

One enterprising soul asked the RSGB General Manager to help him procure a reply and, when he was fobbed-off, politely asked again and reminded him that it was, after all, a part of his job as General Manager to look after the interests of the members who paid his salary. In his reply, the General Manager stated that he "resented" being told that he was in office to serve "the members who pay (my) salary" ! He added that "so many letters have been received on the same subject that it would be a waste of that precious resource, time, to answer them all individually" - this despite the fact that many of the letters contained specific queries which would have needed simple, but specific (as opposed to form-letter) answers.

Other members pressed individual Council members for a reply and received a variety of critical, even derisive responses which, without exception, failed to address the queries raised. None, it seems, enjoyed the experience of being asked to answer specific questions, much less deal with the core issues.

I very much regret that these explanations must appear critical of the RSGB but it is probably important for colleagues to know that, as sensible as the suggestions are, they have been tried already - many times - and have failed completely to have the desired effect. I can vouch personally for the accuracy of what I have reported because I have seen many of the letters and have copies of them.

Whilst I sympathise, therefore, with those who have innocently suggested the obvious and have been rounded upon for their

efforts, I wonder whether it might not help us all, when offering our ideas, to allow the possibility that they may have already been considered and rejected. Similarly, when we comment upon the ideas of others, should we not bear in mind that their authors may not yet have had quite the same, sad experiences as we ?

Personally, I am very grateful for all the comments received because they enable us to know what our colleagues feel about the idea. I would be particularly disappointed if such an exciting project were marred by fall-outs among friends, for the want of nothing more than a little understanding.

Best wishes,

Greg (G0MAM) @ GB7PMB

On Past failures:
~~~~~~~~~~~~~~~~
Although I have not considered this issue important enough to research, I am not aware of any previous, serious attempts to form a new national society.

I attach little importance to it for the simple reason that I am not inclined to be discouraged by other people's failures, even when they are known. My feeling is that, if a goal seems desirable and sensible investigation shows it to be achievable, it is better to look forward and be constructive than look back and regret. I recognise one proviso, which is that there may be lessons to be learned from previous failures which might avoid a further failure.

Of far more concern to me is the knowledge that failure would not only leave us without the benefits which we seek but would also make it very much more difficult for anyone coming after us to even raise enough support to try again.
~~~~~~~~~~~~~~~~

There are some "high profile" and very experienced people willing to give the new society every support: It would be all too easy for detractors to stop any future attempts at forming a society by pointing out, in uncharitable fashion, that the idea was a non-starter because "not even so-and-so and so-and-so could do it in 1996 and _everyone_ knew them" and so on.

If enough of us share the same general ideas about the need for a new society, and the way in which it should function, we need only ensure that it functions as promised in order to satisfy us all. I have already offered the opinion, in an earlier bulletin, that societies are not torn apart because members have differing views. They are torn apart when members feel that their views are being ignored or manipulated.

It must be obvious to everyone that we cannot start from day one with all planned services available, all support systems in place and all the bugs ironed out. It would be ridiculous of us to even hope for that. We must start in a controlled manner, with our goals clearly established and with realistic plans for their attainment.

With all this in mind you may recall that, when I first asked for your opinions, I did broadly outline the principles which I personally would like to see the new society adopting. I went further and suggested that, if there was enough support to justify the effort, I would even undertake to make it happen provided only that enough of you agreed to chip-in with your own enthusiasm and expertise.

My only reservation - and this was also expressed in different ways by some of the earliest contributors to UKRS @ GBR - is that there will need to be safeguards in place to ensure that, having started on the right lines, the society does not stray as time passes and the original supporters stand down, as they eventually must, and are replaced by colleagues who may never have considered the original, high ideals with which the society was born.

I am still watching response with interest and am being very much assisted by some of the suggestions which have been offered. You can all see the levels of interest being declared daily in bulletins to UKRS @ GBR but I can assure you that I am receiving an equivalent volume, if not more, by 'sp', e-mail, landmail and telephone.

In my considered opinion, the formation of a new society is a realistic proposition. Its success is an attainable goal. The benefits to its members could be enormous and the disadvantages to non-members neglible. I can see very few reasons for not going ahead.

At this stage, however, I am taking professional advice about one or two matters, not least of which are the safeguards I mentioned.

If I am advised that adequate safeguards can be built-in, I would anticipate detailing them for you to consider and then, if they meet with your approval, we might go ahead.

Those of you have any experience of working with me will know that I tend to be cautious rather than impetuous - a feature of ageing cynicism I fear - and will be able to feel confident that I would be unlikely to commit to a venture which I did not believe we could achieve. I regret that I can give no further meaningful assurance to those of you who do not know me but I willingly confirm that I, for one, shall not in any way be offended if others prefer to "wait a while and see".

To avoid any potential disappointment later, may I take this opportunity to clarify one point ? If adequate safeguards cannot for any reason be built-in to the new society or if they are not acceptable to you, its potential members, I shall not be inclined to take the idea any further. I mention this not to be pessimistic but to avoid building-up friends' hopes too soon.

Best wishes,

Greg (G0MAM) @ GB7PMB

On Competing with RSGB:
~~~~~~~~~~~~~~~~~~~~~~

It is inevitable that the presence of a second society will qualify for the description of "competition" for RSGB but, in my view, it is important to realise that competition is not the motive for forming the new society.
~~~~~~~~~~~~~~~~~~~~~~

My purpose would be to facilitate the coming together of people like me who, whilst requiring certain support, services and representation, do not wish to rely upon RSGB to provide them. I am not even concerned about why folk may not want to rely upon RSGB - only that the support, services and representation we seek are currently not available elsewhere. The solution seemed fairly clear to me: Come together and provide them for ourselves.

On that basis, concerns about whether a new society could offer the same range of services as RSGB are unimportant and may even be irrelevant. Of course we cannot expect to run before we can walk. My idea would be for the new society to provide what its mem73 ian
/ex
bers
asked it to provide, as they asked. It would only be necessary to evaluate whether there was sufficient demand for a particular service and whether enough support could be found among us to organise it.

The new society would make clear what it was able and willing to do and colleagues could then decide, on that basis, whether or not they wished to join. Having joined they could, if they wished, exercise some influence by indicating what additional services they might like to see.

It may be helpful to consider some figures. We are told that there are some 67,000 UK licensed amateurs and yet we know that RSGB has only 28,545 members - which figure is believed to include SWL's and other non-licensed members. That leaves almost 38,500 UK licensed amateurs who are not RSGB members, and a further, indeterminate number of SWLs. In membership terms therefore, we do not need to "compete" and most certainly do not need to concern ourselves with persuading contented RSGB members to transfer their allegiance.

These figures, of course, take no account of the thousands of Citizen Band users who might wish to join also if we agree to welcome them.

It follows that we should have no interest in denigrating RSGB, nor in responding in an unfriendly fashion to those who may misunderstand our motives. Cliches such as "actions speak louder than words" and "time will tell" spring to mind but it is my firm belief that if the new society were to follow the proposals I outlined - which have attracted unprecented support - two things would very quickly become abundantly clear to any observer:

First, the new society's membership would be unusually content by current standards - in itself an attraction to non-members.

Second, the new society would be demonstrating inarguably that people do, in the main, know what is best for themselves and that the common good _is_ best served by observing the wishes of the

majority.

At some stage, probably sooner rather than later, it would obviously be necessary for us to spread the news of a new society further afield than has presently been done.

Far from perceiving ourselves as competition for RSGB, I personally would prefer that we explained the simple fact that we had chosen to form a new society rather than force change upon those who are evidently happy with RSGB as it is. In my view, that is the fairer course. I do not believe that those of our colleagues who urge us instead to join RSGB and change it from within would really be happy with the "new" RSGB after we had changed it - even assuming that we _could_ change it.

In so far as any new society would be viewed as competition, it might be helpful to observe that "competition is good for trade". BOTH societies would have a vested interest in delivering what they promised, for fear of losing members, and the beneficiaries would then be the members of both organisations. If that wouldn't worry a fledgling new society, why should it worry an established one like RSGB ?

Just my views, for what they may be worth. TTFN.

08 March 1996

Hi,

Since I posted my original bulletin, "The Monopoly Ends ....", response has been astonishing. I am sure that most of you will have observed the volume of mail being addressed to UKRS @ GBR and I can tell you that I am receiving a similar volume by 'sp', landmail, e-mail and telephone.

I have been reluctant to continually post bulletins expounding upon my original suggestions because my prime purpose, as I made clear at the outset, was to learn whether or not there would be enough support for my proposals to justify the very considerable work involved in making them a reality. I did not want to unduly influence the responses, not actively encourage support: at this stage I need to assess it without influencing it.

That said, however, a number of issues are re-appearing quite regularly and some of them are being addressed to me privately for comment. There is the added factor that some of them are serving to divert attention now from the main issue and may shortly start to cause offence between amateurs if they are not "put to bed".

For those reasons, I would like to offer my own opinions on some of the points raised. As before, to avoid posting long bulletins and to enable readers to choose which subjects, if any, are of interest to them, I shall do this by posting a number of short bulletins, one per topic, instead of one large composite.

You may wish to note that the bulletins posted today are entitled as follow:

on Competing with RSGB
on Recognition
on Division of Representation
on Past Failures
on Flood Complaints
on Discounted Subscriptions
on Steering Panels

It is not necessary for anyone to reply to each bulletin but if anyone wishes to comment on any topic I, for one, shall be interested to read his opinion.

Best wishes,

Greg (G0MAM) @ GB7PMB

On Recognition:
~~~~~~~~~~~~~~
Much importance has been placed by some contributors on the need for a new society to be "recognised", by the RA and by internatinal societies. It has even been suggested that any new society would be worthless unless it was so recognised.

With respect, I am not sure that the authors of those remarks fully understand either the way the RA works or what we are proposing that the new society would do.

The only recognition which the new society would require - and this _would_ be crucially important - is from its own members. Without its members' respect, no society can flourish.

The RA does not "recognise" any society in the context which has been presented to us. Indeed, there is nothing in statute which requires or specifically permits it to "recognise" RSGB. It does so because, through RSGB representations, it can maintain a understanding of the wants and needs of its "customers" - for which read you and I.

The RSGB does have a close working relationship with RA but it is important to understand why that is. It is a matter of convenience for both parties - the one because it is interested in its customers, the other because it thus has a route to the policy makers on behalf of its members.

No-one has commented yet, however, on why they believe the RA should wish to exclude anyone, much less a national society, from discussions. It is currently no more than scaremongering, even if well intentioned, and tends to reflect an appallingly low regard for the integrity of the RA.

Furthermore, no-one has commented yet on how the RA might view RSGB. It could very well be that RSGB is regarded as a "useful nuisance" - useful for the reasons quoted above, a nuisance because of the frequency with which letters are received by RA from amateurs stressing that RSGB is not representing their views, and other complaints. Unlike some of the concerns expressed to date, this is not just supposition. The RA is known, for example, to have been less than delighted with the way in which RSGB handled the Morse issue recently.

It may very well be that the RA would positively welcome a new society - a "breath of fresh air" - and the respect which RA attached to the new society would almost certainly increase as it became known for the demonstrable credibility and honesty of its representations.
~~~~~~~~~~~~~~

International recognition is a completely different subject and concerns are fuelled largely by the fact that IARU will accept as national representative only one society per member country.

I have no concerns about this at all. As long as RSGB is willing to undertake that role, I do not see why the new society should wish to do so. I have never heard any suggestion that RSGB would refuse to take into account the views and wishes of any group of amateurs and, indeed, I would be acutely interested to observe the reaction from IARU if it just once did refuse.

But even that is of scant relevance because the fact would remain that, regardless of where we paid our subscriptions, UK amateurs are UK amateurs. What is good for amateurs who happen to be RSGB members would also be good for amateurs who happened to be members of the new society too .... wouldn't they ?

Perhaps the most difficult issue here would be the inevitable cries of "Freeloader" from the small per centage of RSGB members who might be aggrieved that the new society's members benefitted from the labours of RSGB. I am not sure that such accusations would
bother me over much - not when the same could be said of the 38,500 amateurs who are not RSGB members regardless of whether or not they join the new society.

If it did become an issue, what is there to say that the new society would not be willing to share the responsibility with RSGB, perhaps on a rota basis ?

In summary therefore, the issue of "recognition" seems to me to have been taken out of context. As it happens, I have no doubt at all that the new society would very quickly earn considerable respect but I truly do not believe that recognition, in the terms implied by some contributors, is a matter for concern.

If I have missed something, I am sure someone will be good enough to help me understand ....

Regards,

Greg (G0MAM) @ GB7PMB

08 March 1996

On Division of Representation:
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Some very sensible concerns have been expressed about the possible effects of two societies being at odds with one another. At least one contributor has referred to the expression "United we stand, divided we fall".

That expression is based upon reality and, when support or influence is needed, it is certainly true that there is "safety in numbers". That is probably the principle argument in favour of us forming a new society: It reaffirms the need felt by many of us for membership of some kind of collective or co-operative, even though we do not wish to rely upon RSGB.

I would like to suggest, however, that the advantages of having two societies exceed by a considerable margin the advantages of having only one.

A monopoly benefits the monopoly holder, not its members. Introducing a second society would effectively force _both_ societies to remain "on their toes" and deliver what they promised, for fear of losing members to the alternative society.

Those who raised the subject, however, were concerned with what they perceived as the risks of "weakening" the case of amateurs generally when, for example, it came to discussing matters of importance with the regulatory authorities. I tend to think that there are advantages even then.

In my view, when two societies are in agreement about something, and toiling side by side to achieve it, their combined credibility and influence exceeds that of the sum of their members. To put it another way, if one society claims (rightly or wrongly) to have the support of, say, 40,000 members it will obviously have influence. If two societies claim (rightly or wrongly) to have between them the support of 40,000 members, they will jontly have disproportionately more credibility and influence. This may seem irrational but, in my experience, it is human nature to be swayed by multiple representation: It creates the impression that the assertions of the first society are more likely to be accurate because they are corroborated by the second, and visa versa.

Since we all have similar needs and interests, regardless of where we pay our subscriptions, I would anticipate that the incidence of the two societies being at odds about a serious matter would be very low. In most cases, therefore, we would all benefit from
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

"multiple representation" of our common ideals.

Of course, there may very well be occasions when the new society, for example, felt that its members might be disadvantaged by RSGB proposals. On those (hopefully rare) occasions, I would be very pleased to see the new society firmly oppose the RSGB proposals - indeed, I would consider defence of its members' interests the primary concern of the new society.

If that was felt by anyone to be counter to the interests of other parties, my view would still be simply that any society is duty bound to consider its own members' interests first. Consideration of the wider issues is very commendable, and is to be encouraged, but NOT at the expense of the society's members.

I say again, however, that since licensed amateurs have similar interests and needs, regardless of whether and to whom they pay subscriptions, I do not believe the two societies would very often stand opposed before a third party. It follows from this that I believe the advantages to individual members, of having two societies to choose from, considerably outweigh the disadvantages.

Best wishes,

Greg (G0MAM) @ GB7PMB

Mainly what you need is a 3-volt meter movement (or so) and the schematic. The trick is to read the proceedure and figure out what stage you're tuning/adjusting. Look on the schematic for a metering point on the input of the section following the one you're adjusting, and follow it out to the meter connector. Usually you can tell what the correct polarity will be with a little study. Most stages are referenced to ground, but look at the circuitry in question. If you're connected to the positive supply through a small value resistor, look for a metering point that comes from the other side of the resistor and use your meter between those points. This should get you through at least 90% of the basic alignment issues. I've also found this to be true of the GE MVP mobile radios too.

Hope this helps - it's what I do when I've got one to align.

Hell and Damn, are both really tame expressions. But you are right. There is no need for the expression in talking on a community repeater.

The rule to follow is, to speak like you're being recorded, and the tapes will be played back 10 years from now. Could you stand to listen :-)

Sadly, the answer is yes for many Hams.

The best way to handle this is to set an example. If all you do is listen, then you can't change anything. If it's your contact that is swearing, handle it as you would anywhere else: tell him you don't appreciate foul language on the community repeater. As Dr. Laura says on the radio program each day: "You two need to talk."

Actually not. The GE Master II alignment sheets specifically say
that you can use a 20,000 ohms-per-Volt multimeter in place of the
test set. That's what I use.

6252. Connecticut QSO Party Next Weekend

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-27 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4ltrkr$59e@newsbf02.news.aol.com>
Source record: 226774

1996 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 4 until 2000Z May 5, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single Multi-multi classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange report and state/province/DXCC country.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low end; Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150, 144.200, 146.580. RTTY - Normal RTTY Bands (No WARC Bands)

Score one point per phone, RTTY QSO and two points per CW QSO. QSOs with club station W1QI and ARRL HQ station W1AW count 5 points. CARA will be operating W1AW on Sunday, May 5 from 1400z to 2000z, on or near the above-mentioned frequencies.

Connecticut stations multiply QSO points by states/ provinces/Connecticut counties worked (DX only one multiplier); others multiply by Connecticut counties worked.

Plaques and certificates (100 point minimum). Special certificate for working all 8 Connecticut counties.

Send entry and SASE for results by June 5 to CARA, P.O. Box 3441, Danbury CT 06813-3441.

Good luck and 73 de Jim, KD1YV

6253. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-27 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4ltr3a$p9p@lyra.csx.cam.ac.uk>
Source record: 226775
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief sample.

* Following discussions last year the full collection is
* not now posted to alt.usage.english.

Brian Kelk bck1@cl.cam.ac.uk
27 April 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1956 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.
See also <http://aviation.jsc.nasa.gov/alphabet.html>, which
includes information about pronunciations)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

(See also <http://aviation.jsc.nasa.gov/old-alphabet.html>)

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle

cgreenha@magnus.acs.ohio-state.edu (Christopher K. Greenhalgh) wrote:

>Nope...anybody with an IQ over 60 knows that AIDS is not a virus,
>and can NOT be contracted via blood transfusion.

(typical Greenhalgh nonsense deleted)

Go ahead, Chris. Nit-pick over names and terms all you want in an attempt to back your way out of this one. You proved your ignorance on here big time, and everyone else seems to agree. HIV can most definitely be transmitted through a blood transfusion, and HIV causes AIDS. Therefore, AIDS can and is most definitely transmitted through a blood transfusion. Maybe those weren't my "exact words", but my intention was crystal clear. I know it, you know it, and everyone else knows it.

If you're still so sure of yourself, certain that you cannot get AIDS from a blood transfusion, why don't YOU go get one yourself. Maybe we'll all get lucky.

Great article in CQ VHF this month about the need to reduce the outdated Morse code requirements as they currently exist in Amateur radio licensing.

The author doesn't advocate the total abolishment of Morse requirements (although that would hopefully be the end result after the ITU gets it's act together), but rather, a reduction to 5WPM as the requirement for all grades of licenses.

This article tells it like it is, and asks the hard questions...like why, in this day and age, are 13-20 WPM code speeds still required for obtaining Amateur radio licenses? It goes on to answer the question with the true and correct answer: because YE OLDE FAHRTZ, which is where the large majority of the ARRL's operating budget comes from, has convinced them to maintain a pro-code stance. The reason for this, of course, is so they can keep their own little "private club" on the HF bands and keep others from using the frequencies. The FCC continues to consider the ARRL as the official "voice" of Amateur radio operators, although their continuing membership decline as a percentage of total licensed amateurs would clearly suggest that this is not the case.

Finally, someone puts in print what I've been saying all along. Read the article when you get a chance.

>> cursory inspection reveals that socialism extracts a higher toll
>> from those who are capable than from those who aren't.

> Oh really, based on what facts?

Surely you're not claiming not to understand the basic tenets of
your own beliefs? Socialism inherently requires that the needs of
those who don't produce be met by those who do. Who carries the
burden in this situation, and conversely, which party is relieved of
the consequences of their (in)actions?

> By the way, you may not indeed have a written contract, but there
> is a social contract between the government and its electorate.

Nonsense. No person who enters into a contract with another can
morally bind a third individual to it involuntarily. There is not
even a contract between elected officials and the specific individuals
who vote for them. If such a contract did exist, most politicians
would spend their time in court defending non-performance suits.

> If you don't wish to be taxed in order to help your fellow man,
> Jack, you have every right to campaign for that.

Taxation doesn't help my fellow man. It fosters resentment and
mistrust in both the taxpayer and recipient, and it establishes a
debilitating dependence that is passed on from one generation to the
next. Taxation also presumes that every person, by virtue of merely
being born, is legally indebted to all others for the remainder of
that person's life. There is not an ounce of morality in any of this.

> But the social costs that you will pay down the road will be far
> greater. Pay me now, or pay even more, as the man once said.

What you're saying is that the end justifies the means. This claim is
the strongest argument in favor of socialism and it has been used by
the worst tyrants in history as justification to murder millions of
their own citizens.

As for the economics of paying now or later, history says you're wrong. Socialism is self-defeating and every nation that has taken this path had ended in economic if not also moral ruin.

> Pray, tell me which mystery is it that I do not wish to discuss? I
> would be most pleased to know what is that I fear not discuss for
> which I have no idea to what you refer.

In the first post, you wrote "An irony that is almost pervers." In your second post, you wrote "Please desist."

The only irony is the self-proclaimed morality of socialists. The perverseness you pointed out is the outcome of their philosophy in action. Socialism requires an abandonment of freedom and near-total withdrawal from logic. Situations like the one under discussion are the inevitable result.

>> This reminds me of an English couple I met a few years ago. First
>> they stated that Thatcher would be greatly offended by anyone who
>> called her a socialist. Then, in the same breath, they justified
>> their government's behaviour on the grounds that most people prefer
>> guardianship to freedom.

> The point being?....

The fact that a superior intellect such as Thatcher would be offended by the accusation was ample "evidence" to this couple that their views weren't socialist (or that if they were, they were based on "good" socialism). This is the withdrawal from logic that I mentioned above.

>> It takes some pretty tall boots to wade in on that side of the
>> fence.

> .. and even taller boots to wade through the accompanying bovine
> scatology.

Jim, if a thief steals property and donates that property to charity, he has violated the rights of the property owner. Those rights are no less violated when the government commits the same act, even if the majority of the owner's fellow citizens condone it.

You can only successfully propose socialism if the truth of all this is buried in convoluted logic. Unless you can show that the rights of individual persons are no more legitimate than those of ants and bees, your arguments will fail from any objective perspective.

Stupid comparison. Rare for tornadoes and rare for hurricanes doesn't
imply the same frequency. I like my analogy better -- it does snow here
in the Piedmont, but everybody freaks out and doesn't know how to handle
it, and the same goes for tornadoes, because they aren't frequent enough
that people know how to respond properly as do people in, for example, the
midwest.

Subject: The ARRL Letter, April 26

The ARRL Letter
Electronic Update
April 26, 1996

IN THIS UPDATE:

* FCC drops pilot RFI program
* H-Ts okay at Olympics after all
* FCC proposes 5 GHZ spectrum for wireless LANs
* FCC denies W5YI petition
* Action by Skywarn hams saves lives in NC tornado
* "Sparks" victim of satellite system
* Solar update
* In Brief: Vanity call sign status; DO-17 still down;
Scouts take to the mall; SUNSAT satellite launch set

FCC DROPS PILOT RFI PROGRAM

The FCC has quietly ended a pilot program in Tampa, Florida, that referred consumer-electronics interference cases to a local repair shop for resolution. Jim Dailey, the FCC engineer in charge in Kansas City and head of the FCC's privatization task force, says the FCC's data showed the program "had no takers" because the complainants did not want to spend money to eliminate the interference.

Fear was another reason, says Roy Lewis, W4WLY, whose Vulcan Electronics in Tampa was the only shop certified by the FCC (from August 1995 until February 1996) to deal with interference problems. Lewis reports that all of the approximately two dozen complaints of RFI to televisions, stereos, telephones and even air conditioners, stemmed from unlicensed, high-power operations that the customers already had identified. He said the customers not only didn't want to pay to have the problems resolved, "they were afraid of retaliation if I went out there."

In an April Public Notice, the Commission said it cannot resolve most of the thousands of complaints of interference to TVs, radios, stereos and televisions "because the cause of this interference is the design or

construction of these products and not a violation of any FCC rule." Resolving interference problems will be the responsibility of manufacturers and consumers, Dailey said. "We are separating the issue of interference from the issue of compliance. We are not in the television or telephone repair business." Daily said consumers who buy an electronic device "have a presumption that it ought to work when they buy it."

The FCC's Telephone Interference Bulletin encourages consumers experiencing telephone interference to write equipment manufacturers, and it even provides a sample complaint letter to make it easy.

Lewis said the consumers complaining about RFI problems believe the government should do something about it. Extremely high-powered 11-meter operations are common in the Tampa area, Lewis reports. He said the scofflaws often cascade several illegal power amplifiers to obtain extremely high power levels, and he'd like to see the FCC beef up enforcement, "at least in metro areas."

In the same Public Notice, the Commission emphasized that its Compliance and Information Bureau "will continue to take appropriate enforcement action where it has been determined that the interference is caused by violations of the Communications Act or the Commission's rules or policies."

ARRL Lab Supervisor Ed Hare, KA1CV, says he's cautiously optimistic about the FCC's stance on interference, as reflected in the Public Notice. "I truly hope the Commission's statement represents a shift in the way the FCC will handle these matters," he said. But he noted that the FCC has not taken "appropriate enforcement action" in any of the cases referred to Lewis' shop. Ralph Barlow, engineer in charge of the FCC's Tampa office, agrees that such illegal operators generate lots of interference complaints, but says it would take more than complaints before his office would treat it as a compliance issue. For example, a properly operating amplifier could cause telephone interference, but "it's still the telephone's problem," he suggested, until the FCC has good reason to believe the interference source also is breaking the law. Then, "we would address it only as a compliance issue" and on a priority basis. "Which probably means we'd never get to it," Barlow conceded. Tracking down an offending operator can sap a lot of resources the FCC needs to apply elsewhere, he said. "We go after the worst first."

Dailey concurred that the FCC's staff is thinly spread and that other issues--primarily those involving safety--come first. After the FCC's reorganization is complete, he'll have one person for each of the four states in his region. "We have to look at what we can accomplish with the resources available to us," he said.

Hare says the ARRL will continue to cooperate with the FCC and manufacturers in cases of interference that involve Amateur Radio.

The FCC provides basic consumer information about interference problems via the Internet on the FCC Compliance and Information Bureau's home page at http://www.fcc.gov/Bureaus/Compliance/WWW. (The list also is available

through the Commission's Fax on Demand service at 202-418-2830. Request document 6904.) Documents available for viewing and downloading include the Interference Handbook and the Telephone Interference Bulletin. The Interference Handbook includes a list of equipment manufacturers who provide specific assistance with interference problems.

The ARRL makes available several RFI-information packages through its Technical Information Service. Specific packages are available for interference to TV, cable, VCRs, telephone, computer and audio equipment as well as on electrical and automotive interference. Each package costs $2 for ARRL members and $4 for nonmembers, postpaid. Write to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. Most are also available on the Hiram BBS (860-594-0306) or the ARRL FTP site ftp://oak.oakland.edu/pub/hamradio/arrl/infoserv/tech.

HOLD THE PHONE: H-Ts WELCOME IN OLYMPIC VENUES AFTER ALL

The latest word from Atlanta is that Amateur Radio will be welcome at the Olympics this summer after all. ARRL Southeastern Division Assistant Director Jim Altman, N4UCK, reports that ham equipment, including hand-held transceivers, is not on the list of items excluded from Olympic events. "There was some thought at one time of banning all communications devices, including cellulars," Altman said. He said he had assurances "straight from the horse's mouth" that H-Ts would not be banned from Olympic venues, as had been announced earlier and confirmed by Michael Smalls of the Atlanta Committee for the Olympic Games' technology department.

Altman said he's been in close contact with the top security people in ACOG in his capacity as head of the ad hoc group under the ARRL umbrella that's coordinating the Amateur Radio volunteer force for the games in July, and the security heads have assured him that ham radio H-Ts--as well as CB transceivers and cellular telephones--will not be kept out and may be used in Olympic venues. Altman said not only will ham radio be allowed through the gates, hundreds of ham radio volunteers will provide "contingency communications" to support the security force's radio system. He expects to have approximately 350 ham radio volunteers.

Altman had no explanation for the earlier, contradictory announcement, but he did offer a word of caution: "ACOG's decision-making process changes daily. This is the state of affairs today," he said. "But I don't see any indication that it will change."

FCC PROPOSES 5-GHZ SPECTRUM FOR WIRELESS LANS, INTERNET ACCESS

The FCC has adopted a Notice of Proposed Rule Making to make available 350 MHz of spectrum at 5.15-5.35 GHz and 5.725-5.875 GHz for use by so-called NII/SUPERNet devices. The spectrum includes part of the shared Amateur Radio allocation at 5.65-5.925 GHz. The unlicensed devices provide short-range, high-speed wireless digital information transfer and could support new wireless local area networks (LANs) and facilitate access to the Internet. The proposal is in response to Petitions for Rule Making from Wireless Information Networks Forum (WINForum) and Apple Computer Inc.

The FCC has proposed regulating NII/SUPERNet devices under its Part 15 rules. "Unlicensed Part 15 status would facilitate spectrum reuse and provide protection to incumbent and proposed primary operations," the Commission's announcement said. The Commission also has proposed only the minimum technical standards necessary to prevent interference to other unlicensed devices as well as to services already using those frequencies and to ensure efficient spectrum use. Proposed rules specify power limits, out-of-band emission limits and a basic "listen-before-talk" protocol. Details of the proposed rules are not yet available, however, according to ARRL General Counsel Chris Imlay, N3AKD. The FCC said it was encouraging industry to develop additional standards it believes necessary.

In a separate statement, FCC Commissioner Susan Ness said such unlicensed devices "can play a vital role in meeting established and incipient needs for communications offering mobility, flexibility, versatility and economy." She said she was "especially enthusiastic" about WINForum's proposal, and said the proposal sets the FCC on a course that will "bring substantial benefits, with no intrusive governmental intervention."

FCC DENIES W5YI PETITION TO END ONE-WAY TRANSMISSIONS

Citing overwhelming opposition, the FCC has denied a Petition for Rule Making, RM-8626, filed last year by Frederick O. Maia, W5YI, that would have prohibited one-way transmissions of bulletins and code practice--such as those aired by W1AW--on frequencies below 30 MHz. Maia had argued that such transmissions were outmoded and that some one-way, broadcast-type transmissions have interrupted two-way communications already in progress.

Maia publishes the commercial newsletter the W5YI Report, manages the W5YI-Volunteer Examiner Coordinator and publishes training materials for amateurs.

When he filed his petition, Maia expressed concern over the level of anger directed at certain one-way transmissions. "The proliferation of these stations has caused chaos in the amateur community that has now reached crisis proportions," he said.

The ARRL said that Maia's arguments were overstated and inflammatory, and the League urged the FCC "in the strongest possible terms" to deny or dismiss the petition without further consideration. The League cited W1AW's 65 years of free service to amateurs; other countries whose amateur societies also conduct informational bulletins on the air; the absence of any allegations that W1AW creates any significant interference to ongoing amateur communication; and the value of W1AW's bulletins in alerting amateurs to emergency situations.

The League said that "any on-air anger perceived by Maia" ought to be the subject of FCC enforcement action, not rules changes, saying such situations were the direct result of the Commission "allowing abuses to continue for months and years" rather than addressing them in a timely manner in the context of the existing rules.

The ARRL also said that W1AW code practice as a free alternative to Maia's retail sale of code practice products "is sufficient rebuttal to the

allegation that the code practice has 'outlived its usefulness'."

During the comment period, the FCC said it received 371 comments opposing Maia's request and 20 comments supporting it. While acknowledging some disagreement about the propriety of one-way transmissions on HF bands, the Commission said the overwhelming opposition to Maia's petition "persuades us that the amateur service community continues to view the one-way information bulletins and the text for telegraphy practice to be of great value to the service."

SKYWARN HAMS SAVE LIVES DURING CAROLINA TORNADOS

Thanks to early eyewitness reports of tornado activity by Skywarn hams, no lives were lost when tornadoes hit the Raleigh, North Carolina, suburb of Zebulon around suppertime on April 15. The storms damaged or destroyed nearly 100 homes and caused some minor injuries. Eyewitness reports of the tornadoes on the Amateur Radio Skywarn network, intercepted and broadcast by Raleigh TV stations, gave many people the few minutes they needed to take cover.

The Skywarn network is a voluntary effort by Amateur Radio operators and other weather spotters, working in cooperation with the National Weather Service. Because of a severe thunderstorm watch, the Raleigh Skywarn network had been on the air since midday April 15, with an operator at the ham station at the Raleigh NWS office. Just before 6 PM, sightings from hams on the Skywarn system prompted a tornado warning from the weather service. WRAL-TV monitored the Amateur Radio traffic and broadcast its own warning before the official NWS warning.

The Skywarn net stayed on the air late into the evening, as a tornado watch continued until 1 AM. Then, as telephone circuits in Zebulon were disrupted and cellular channels became overloaded, Wake County Emergency Management called in additional Amateur Radio operators to provide communication between the county emergency operations center and several sites in Zebulon, including emergency shelters.--Gary Pearce, KN4AQ, Raleigh Amateur Radio Society; Wake County Amateur Radio Emergency Service

"SPARKS" GIVES WAY TO SATELLITES?

The nostalgic image of the shipboard Sparks getting the message through with his trusty telegraph key took a reality hit April 5 when the FCC voted to drop the requirement that vessels equipped with the Global Maritime Distress and Safety System also carry manual Morse code radiotelegraph gear. The Commission requested that Congress authorize the change, and it was included in the Telecommunications Act of 1996.

Previously, US-flag cargo vessels of more than 1600 gross tons and US-flag passenger vessels were required to carry a manual Morse code radiotelegraph installation when navigating in the open sea or on international voyages. The radiotelegraph-based vessel safety system, however, is being phased out internationally and is scheduled to be replaced by the GMDSS on February 1, 1999. Qualifying vessels won't have to carry CW equipment if the US Coast Guard determines the vessel has GMDSS equipment installed and in good

working condition.

The rule change exempts GMDSS-equipped vessels from the radiotelegraph requirement, provided that each vessel is inspected by the Commission or its designee, and is issued a safety certificate or endorsement. The Commission noted that the US Coast Guard intends to accept the safety certificate or endorsement as evidence that the GMDSS has been installed and found to be operating properly. The FCC says the action "will reduce economic burdens for vessel operators, enhance worldwide competition in the shipping industry by eliminating a requirement generally applicable to only US vessels and increase safety at sea by promoting the timely implementation of the GMDSS."--FCC

SOLAR UPDATE: MORE OF THE SAME

Solar observer Tad Cook, KT7H, reports that solar flux remained low during mid-April, but the geomagnetic field was quite active, making conditions, in a word, lousy. There were several more days of no sunspots, but frequent periods with a K index of 4 and 5 increased absorption of radio waves. When conditions stabilize, look for 30 and 40 meters to provide the best chance of worldwide DX. As of this weekend, the K and A indices should be quite low again, and though there won't be much ionizing radiation from the sun, at least conditions will be stable.

Look for a return to unstable periods after May 10. Solar flux should stay around 70 or lower, falling into the high 60s after April 26.

The 199 solar flux figure forecast for August 2000 (and reported earlier), is a projected average for the month, and it is also a guess based upon previous solar cycles. We hope that peak levels in the summer and fall of that year will be higher on some days. Sunspot numbers for April 11 through 17, respectively, were 0, 13, 13, 0, 0, 12 and 14, with a mean of 7.4. The 10.7-cm flux was 68, 68.3, 68.8, 68.7, 68, 68.3 and 69.3, with a mean of 68.5.

In Brief:

* The long-awaited vanity call sign program is still in the works, but the FCC has not yet announced when the program's various gates will open. As of press time in late April, the FCC was saying it was still on track for a mid-year start. According to the Commission, the delays have been a result of having to deal with a second wave of Petitions for Reconsideration, and wrapping up their computer-system preparations for the vanity call sign program.--Bart Jahnke, KB9NM

* The DOVE-OSCAR 17 satellite remains down following problems first experienced last December when an onboard computer apparently crashed. Jim White, WD0E, of AMSAT reports that ground controllers have ruled out a few hardware problems, but have come no closer to identifying the actual cause of the satellite's onboard computer problems. "Work continues," White said. "We are continuing to develop further ways to test the hardware." The satellite is transmitting occasional packets on 145.825 MHz. DO-17 is not

transmitting on S band.--Jim White, WD0E

* Explorer Post 80, sponsored by the Mount Vernon (Virginia) Amateur Radio Club, will operate from the National Mall in Washington, DC, Saturday, May 11, 1996, as part of the "Scouting on the Mall" activities. KF4CNF will be in the General phone bands on 40, 20, 15, and 10 meters, as band conditions dictate. Hours of operation will be 1400-2000 UTC. KF4CNF will accept traffic from Scouts on the Mall and operate 2-meter FM as well.--Bill Stewart, KE4BAE

* Reliable sources indicate that the launch date the Amateur Radio SUNSAT satellite has been set for March 6, 1997. SUNSAT is sponsored by the University of Stellenbosch, in South Africa. One of the more unusual projects riding on SUNSAT is an experiment to monitor the internal sounds of the spacecraft during the early part of its mission in space. Sounds from the spacecraft will be available in real time through a 2-meter FM downlink transmitter.--AMSAT News Service

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 APRIL AND FORECAST FOR 28 APRIL - 30 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 26 Apr
Daily Proton Fluence >1 MeV: 5.6E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.1E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Apr 29 Apr 30 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Apr: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 26 Apr
Learmonth 5 2121 2122
Fredericksburg 4 6
Planetary 5 5

Observed Kp for 26 Apr: 2211 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
28 Apr 8 Quiet to unsettled
29 Apr 5 Quiet
30 Apr 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
27 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
28 Apr Normal Normal Normal-fair
29 Apr Normal Normal Normal
30 Apr Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
27 Apr 2

Observed Australian Regional MUFs:
Darwin: Depressed 15-30% 07-12UT,spread F observed during
the period 15-17UT, otherwise near predicted monthly
values.
Townsville: Depressed 15-30% for the period 01-08UT, after
which returned to near predicted monthly values.
Sydney: Near predicted monthly values,apart from 15-30%
enhancement observed during the period 14-20UT.
Canberra: Near predicted monthly values.
Hobart: Depressed 15% for the period 01-09UT, with spread
F observed during 11-14UT, otherwise near predicted
monthly valus.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
28 Apr 5 near predicted monthly values
29 Apr 5 near predicted monthly values
30 Apr 10 near predicted monthly values

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.sarrio.com.

This new classified section will allow Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access, direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting will go on-line, in our classified search engine, immediately. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line within 1 hour. I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

>cleaned your rifle. As a result you could not always clean this part.
>And that is what the Army wanted. You see, if it were cleaned all the
>time, it would get WORN, the gas would leak, and the rifle would lose its
>re-cocking capability.

Actually, not true. As the FM says, the gas piston is not to be
mechanically *scraped* to remove carbon deposits, but it does
need cleaning periodically to prevent it from sticking due to
carbon deposit build up, and soaking in carb cleaner (GI bore
solvent) is the recomended method. Since the part is stainless
steel, since GI bore solvent is a potent carcinogen, and since
ROTC cadets don't fire the M1 very often to generate carbon
deposits, routine cleaning is not required. The idea that
routine cleaning (not scraping) would cause the gas piston to
become loose is just myth, however.

> This is relevant. Suppose anyone who wanted to could become a ham.

They can. Not very many want to become hams under the present system,
though, and that's a problem for the future of the service. Prior to
the code test free Tech, the average age of US amateurs was 59. That's
dropped to 54 since the code test free Tech, but the average age at HF
hasn't dropped proportionately and may now be well above 60. That's not
healthy for the future of the service.

>The frequency bands are a LIMITED resource. Lots of people become hams,
>since there is no talent required (as the illogical extension of the
>argument). Terrible crowding. Then you will have something else to
>complain about. But there will be no solace for ths, as there is simply
>no more room to fit hams on the bands.

That's what was said in 1934 when there were 16,000 amateurs, and
was the excuse used then to impose a higher speed Morse test for
phone access to HF as a means of rationing spectrum (partially

reversed in the 1950s). But of course better techniques were developed, and now there are almost half a million amateurs with HF phone access, and the crowding is no worse than it was for 16,000 in 1934. Necessity is often the mother of invention. Without pressure to drive invention, there is no need to make improvements. Better modulation techniques, better receivers, and improved operating techniques made the difference that allowed the increase in number of operators to be accomodated.

If there were still only 16,000 operators, there would have been no need to abandon AM, no need to abandon broad receivers with low intercepts, no need to prohibit music (that was allowed in 1934), and no need to move to VOX instead of 10 minute monologues. That's the sort of stagnation fostered by the distortion of the market brought on by rationing. And indeed, that was the situation up until the early 1950s when Generals were given full phone access. That increase in numbers forced amateurs to update their techniques to accomodate the growth.

> So you see, it IS possible that some things that are perceived as a an
>impediment to access actually can have a purpose.

Indeed, but the purpose is often ill founded, being based on myth, misinformation, or a selfish desire to preserve the status quo.

Well, I've done this in the past. I mounted a single headphone element and a mic element inside a Bell full face helmet (buried in the foam inside) with an old mic cable carrying ground, rx audio, and tx audio to a stereo 1/4 inch phone plug. The mating 1/4 inch stereo headphone connector was mounted in the fairing near and just above where my right knee would be. This way, if I wanted to dismount, a simple tug on the connector and I was free.

The radio itself I mounted in the fairing instead of a broadcast receiver or tape deck. I made a PTT switch from an old Triumph kill button, mounted where I could easily reach it with my left thumb while riding. (VOX operation is simply not practical due to the variability of traffic and wind noise at various speeds. Or unless you really want to demonstrate your command of ...er... the use of language when someone does something really dumb in front of you.)

I used a standard Larsen 5/8 Antenna with a 3/8 inch hole mount in the grab rail that ran behind the seat, and fed that to the radio in the fairing. It was inconvenient for the passenger, though. Not too bad for the rider. Keep the coax well away from the HT leads, though, or stuff the coax through a bit of tubing when near the coils, though.

Motorcycle electrical systems also tend to be - or used to be, anyway, pretty dirty. Almost no filtering, or electrical noise consideration at all. I had the best success by putting a series voltage regulator right at the radio, and restricting power to the radio to no more than 12.0 volts. This meant all the really nasty stuff got wiped right off the incoming power to the radio. If you plan to use a handheld instead of a mobile, it may be necessary to lower the voltage even more - say 10.5 or 11 V, like I did when I used my old Yaesu FT-207R in the tankbag.

Lastly, be more careful when riding and using the radio. I found using the radio a BIG distraction when riding. Enough that I didn't even change channels or volume until stopped. Of course, if you really want a challenge, try operating 40M CW motorcycle mobile.......

Ohio/Penn DX Bulletin No. 252

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 252
BID: $OPDX.252
April 29, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA2FIJ, KQ4QM, WA4JQS, AA5AU, W5ZPA, DF4RD, DL7VOA, DL9GOA & DX News Letter, F6AJA, G4BUE & DX News Sheet, I1JQJ, IK1DPA, JR0GFM, ZL2DX and ZS1AFZ for the following DX information.

3A, MONACO. Tony/IK1QBT, Frank/IK1HLG and Mauro/IK1CJO will be signing 3A/homecall from May 11-13th. Activity will be on all bands, including the WARC bands. Operations will be mostly CW (by Tony) and RTTY with some SSB (by Frank and Mauro). QSL via their respectives home calls.

3V, TUNISIA. Hrane, YT1AD, will be activating the club station 3V8BB from May 23-30th. Band activity and operations are unknown at this time. QSL to his homecall.

9A0, CROATIA (ATTENTION PREFIX HUNTERS!) The DXNS report 9A0CW will be active in the CQWW WPX CW Contest. This will be the first time that the 9A0 prefix is to be used). QSL via 9A2AJ.

9M2, WEST MALAYSIA. Presently there are plenty of 9M2 stations active daily between 1200 and 1700z on 20 and 40 meters. 9M2JJ can be found on 40 meters CW, while 9M2IY and 9M2/G4JVG can be found on 20 meters SSB somewhere on the band.

9M8, EAST MALAYSIA. Chang, 9M8FC, can be found operating CW on 20/30 meters between 1330 and 1830z. QSL via CBA (1995).

FO, CLIPPERTON ISLAND DXPEDITION 1997. Jay, WA2FIJ, has reported he is interested in returning to Clipperton (projected date is around March of 1997). It has been 5 years since the activation of Clipperton. Jay is trying to keep costs down by looking for hams or friends of hams with boats capable of making the trip. The last trip was on an 88 ft. power vessel and was comfortable, but expensive. If a few 45/55 ft. sailboats could be found, a flotilla could be established which would result in (1) capability to carry enough gear and personnel and (2) improved safety.

If you know of any hams or friends that may have access to a boat that can make the trip and would be interested in participating in such an adventure, please drop Jay a line via InterNet: pcb4u@ix.netcom.com

IOTA NEWS. Takeyasu, JR0GFM, will be active from Kamisaka-Park (about 300 meters above the sea) in Tsushima Island (IOTA AS-036), May 5-7th. He will be using some QRP transceivers to be active on 30 meters CW, 20 meters CW/SSB and on 10 meters FM.
F6EXQ and some others will be active as F6KSA/P from Cordouan Island (IOTA EU-159) located in the Aquitaine Region Group, from June 28th to July 5th.

IZ, ITALY (New Italian Prefix). The IK#AAA-IK#ZZZ series, which had started in the early 1980s, has run out. Italian radio amateurs are therefore being given the new IZ#... callsigns (3-letter suffix, from AAA, AAB, AAC etc. up to ZZZ).

JD1, MINAMI TORISHIMA. JG8NQI/JD1 is active on Marcus Island and can be found on 30/20 meters CW. Check between 1000z and 1330z on 30 meters or around 0745z on 20 meters CW/SSB. QSL via JA8CJY. Also, JD1YBJ was heard this past weekend on 21177 kHz around 0550z.

JX, JAN MAYEN. Per, LA7DFA, is now operating as JX7DFA, and he will be on the island for a six month stay. He has been heard active on SSB and RTTY. Per currently has a problem hearing North America due to the mountain that blocks N.A. from his location and his yagi has a bad rotor hich is stuck pointing to Europe. There is good news. He has a replacement rotator in hand and he plans to to work North America by mid-June with a new Icom rig and an amplifier. QSL via LA7DFA, Per-Einar Dahlen, N-8099 Jan Mayen, Norway or via PO Box 105, N-6520 Rensvik, Norway

NEW DX NET: As of April 20th, a new DX net started with OE6EEG as net control. This net will be held every Tuesday at 0600z on 14220 kHz and every Friday and Saturday at 1400z on 14220 kHz.

NEW DX WORLD-WIDE WEB PAGE. George, KQ4QM, reports he has setup a new DX WWEB page (He calls it the "Unofficial DXCC Web page".) George states he just did not want to design a WEB page with a bunch of links to other sites but instead he has made the DXCC list with a new twist. For each country he has made a page that includes geographical information (population, area etc.) and DXCC information (admission date, country number, etc.). The URL is http://www.webbuild.com/~geo

THE SOUTH SANDWICH ISLAND ANTARCTIC DX GROUP NEWS. Tony, WA4JQS, has announced that Gary Jones PH.D, W5VSZ, of Hattiesburg, MS, has been added to the SSIDXG team. Gary is an Extra Class operator who has been a ham for 35 years and has operated as HS0AC in August of 1993. Gary will fill two roles with SSIDXG. He will fill the spot for CW operator on the team and he will help in designing and running a WEB site for the SSIDXG. Once the WEB site is on-line, SSIDXG will release information as to their next major DXpediton to an Antarctic island.

TL8, Central African Republic. Eric, F5SEC, still continues to be active as TL8ED until end of May. He usually can be found on 20 meters SSB between 1530 and 1700 (sometimes as late as 1930z). QSL via his homecall.

VOLUNTEERING HIS SERVICES. Chet, KA3NUM, would like to offer his services as a QSL manager for a DX station. He has been an active ham for 10 years, DXing for 5 and sure appreciates the stateside managers. Chet can be reached at: Phone - 1-412-271-7151 or via E-Mail: dandr@pgh.net

ZF, CAYMAN ISLANDS. Mike, W5ZPA, will be active from the Grand Caymen as ZF2PA, from May 19-25TH. Activity will be on CW, SSB, and RTTY. QSL to his home call W5ZPA: Michael W. Mayer, 5836 Marcia Avenue, New Orleans, LA. 70124

ZL8, KERMADEC ISLAND (UPDATE). ZL8RI should be active next weekend (May 4-14th). Chris, ZL2DX, one of the operators, has suggested the following frequncies to look for them:
CW - Will be 5 or 20 kHz above the bottom of the band.
RTTY - Will be on 14080 and 21080 kHz or if conditions are bad 7040 kHz.
SSB - 1830, 3775, 7065, 14195, 18120, 21295, 24940 and 28395/28495 kHz.

ZS8, MARION ISLAND (UPDATE). Chris, ZS6RI, is reportedly on his way by boat to this very environmentally controlled island. There are only about 10 individuals on this island and each individual stays on the island for only about 14 months. Chris will be on the island until June or July of 1997. His callsign will be ZS8IR and Chris plans to be active on CW, SSB and RTTY, with operations on 160-6 meters. Chris hopes to be active in the CQWW WPX CW Contest. For more details read OPDX.247

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the two following addresses: kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

be the first on your block to own one of these...

now you can own your own - most likely a one of a kind item...

it is a radar set used by department of public safety and other law
enforcement agencies in the late 50's early 60's.

operates on 12 volts dc, and measures speed up to 100 mph.

works and is in pretty good shape. comes in two cases. consists of a
power supply, metering unit, and a transmitting unit.

would make a VERY interesting conversation piece.

In response to Drew Durigan:
Far from being a great article, the CQ VHF piece represents nothing more
than an extention of Dick Ross' belief that we should have a slow code
license, with editor Rich Moseson naturally supporting that view. I'm also
attempting to confirm the report that ARRL First VP Steve Mendelsohn has
truly chimed in. That's well to be expected, but it must also be remembered that VP
Mendelsohn does not even believe amateur radio need be a technical hobby!
(see previously posted quote of his Ham Expo speech in Long Island,
New York on 10 Nov 1990). Which also brings the interesting question
of how his personal views would impact on the special committee ARRL
President Stafford has convened to discuss the no-code issue in a seemingly
impartial atmosphere.

It should also be well noted that ORACLE, the 6-man team that first placed
thoughts of an international HF no-code license in the minds of some
amateurs, would be against the CQ "editorial," as they stated in
Westlink Report, 27 October 1994, page 6:

"We (ORACLE) are firmly against the lowering of standards, and would
not support the "slow code" lobby as that is tantamount to a LOWERING
OF STANDARDS. We want to hold standards, and also want new tests
or examinations that are equally as challenging as the existing code
tests..."
"USA amateurs should be aware that the technical examinations in other
countries...have not been lowered in standard...Examination questions
are not part of a published pool...But if any amateur examination system
could be said to have been 'dumbed down,' then the current USA
methodology is a candidate. But presumably it could be 'undumbed'
if there was a need."

The last sentence, by the way, also exposes the flaw in ORACLE's
argument for a no-code license in this country. Exams can be 'undumbed,' at
least not in the US. Once a deregulatory policy is established, returning to the
former policy, i.e., restoring standards, is virtually impossible, and no major
decision-making policy concerning the Amateur Radio Service has
EVER been made along those lines in this country. The problem turns
out to be a legal one: once that barn door is open towards easing of
a requirement, any attempt to return to former standards generally
will attract a cry of "discrimination," "elitism," and eventually,
a lawsuit. That's one major pitfall to restoring theory exams in this
country. And since theory exams won't be restored, we can't
'undumb' the exams in the U.S.

Before the shortsighted proposal for a slow code license takes hold,
amateurs would do well to understand what benefits will be lost if

the Morse requirements are eased. The issue, again, has absolutely nothing to do with the Morse Code as a mode, and ORACLE obviously understands that which amateurs here do not understand! Here, in the U.S., the issue has to do with easing of requirements, and economic factors. But as we have eased requirements, we have lost precious spectrum (see Amateur Radio Spectrum Protection Act initiated by ARRL, 1989). Indeed, amateurs would do well to understand the history of the entire issue before being duped into taking a step in any direction. Or allowing any committee to lead them down the garden path.

Regards,
Vince, WB2EZG
(Life Member, ARRL)

P.S. If the results of a recent poll in an ARRL Division are to be believed, two out of every three amateurs believe Morse Code requirements should be either RETAINED or made tougher! Thus, amateurs again would do well not to believe ANYTHING until some official documentation arrives to support it. Ultimately, a binding referendum would be
the idea way to settle this issue. The ARRL, however, does not appear too anxious to conduct such a poll. Failure to do that, however, is at odds with their statement that WE are the ARRL.

6288. Watch those "Rig Control" Programs!

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-28 00:00:00 UTC
From: bruces@mpd.tandem.com
Message-ID: <4lujar$ejo@news.mpd.tandem.com>

Subject: PC Rig Control program caused "brain dead" TS-850!

I recently used a PC-based "Radio Control" program available as shareware to see how it would perform with my radio. I wanted to use this program to download to my Kenwood TS-850S, so I had created a file with all the frequencies I planned to load into my 100 memory channels. Most of the memory channels I had plans for. In the case of memory channels I did NOT plan to use, I loaded them with "000000000" instead of leaving them blank. This may have been the first/last mistake....read on!

When I downloaded all memory channels from my PC, the first channel with a non-zero frequencies appeared to work fine, however, when I selected the first memory channel (supposedly) loaded with "000000000", the Kenwood display flashed and then went out. I wasn't expecting that! I cycled power on the Kenwood and found out that the radio was now dead (i.e. all display panel indicators lit but dim, nothing else operational, including I/F port.... brain damaged!)

At first, I thought I was a victim on coincidence and that something had just failed in the radio at the time I downloaded the memories. I checked various voltages/circuits and found nothing out of line. After looking at everything that might give me a clue as to the problem, I decided to see how the HW was designed related to storing information, like the memories. The design is fairly straight forward, with a microprocessor booting from ROM and some battery backed-up RAM for memory (no pun intended!) channel storage, etc.... It was the "etc." part that got me thinking.

In my past life, I had designed a Terminal (remember those?!) that would boot from ROM (since it is non-volatile, you can always count on it...assuming the part doesn't fail ;-)). In the ROM code design, we had include a "jump" statement to some battery backed-up RAM for 2 reasons.

1) If there was a bug discovered over time in the ROM, we could jump to the RAM and patch around it.

2) If we wanted to add a future enhancement, we could easily grab control of the code before it went to far....great for debugging also.

Anyway, we applied this theory to the TS-850 and decided to "remove" the battery (unfortunately, it was buried in the front section and was soldered in..."removal" was done by clipping an inductor lead in the path of the battery to the BB RAM.

After re-soldering the inductor, we fired up the radio and "presto", everything was back to normal (or at least the defaults with

nothing in the memory channels)

Since this was successful in clearing the "brain damage", all I can figure is that Kenwood has some "reserved" bits in the BBRAM or it checks some bits at power up to determine how to operate. The program we ran loading a "0 Hz" frequency into the BBRAM must have caused the Kenwood to get REAL confused!

Two suggestions I'd have for Kenwood are (since the 850 is being replaced by the 870, I wouldn't expect any action...however, if the 870 is similar in design....hhhmmmmmm.....)

1) Socket the battery for easy removal/replacement

or

2) Provide a HW reset switch that can reset BBRAM
in the system.

The program I used is KF6PU's Kenwood Controller program (1994). This is NOT(!) an attack on KF6PU's program. It's actually pretty good, just found one of the unique bugs (See, they DO exist and need to be planned for AFTER the product ships!). I suspect there are other controller programs that also put the Kenwood into a strange state. I also assume this may apply to the other Kenwood radios but don't know for sure. Maybe even non-Kenwood radios. Hence the reason for the wide distribution on this message.

Bottom line, if you get your radio into some unknown state, you may want to try this before you send it in for repair. Make sure you're VERY familiar with tearing things apart, soldering, putting them back, etc. If you don't feel comfortable, then SEND IT BACK!! ...don't risk your radio unless you know what you are doing!

By the way, I talked to Kenwood Service before I went down this "brain damaged" path and they were very helpful, however, they had not seen/heard of this problem before and weren't sure how to fix it.

I hope this may help some folks if their radios go "brain dead" as an alternative to sending it back to the repair houses. I have nothing against repair house (used to work in one myself some years ago!).

A correction to my last posting:
Paragraph 4, sentence 2, should obviously read: Exams CAN'T be 'undumbed'...

I wish they could be, for then we might have a way out of this debacle. As it is, however, those who believe that amateur radio is a constitutional right, and those who wish to gain entry into amateur radio as a constitutional right, essentially block those efforts.

I haven't spent a great deal of time mobiling cross-country, but my wife and I are planning on a roundtrip from California to New York and back later this summer and will be taking an HF-equipped car.

I understand that 40 meters is the common daytime mobile frequency and that there are nets whose sole purpose is to keep track of those mobiling around the country. Could someone give me the frequencies of these nets and perhaps some additional information on them?

Thanks very much.

Looking for the specs on the TS-520 when it's hooked up to a TV-502 2M transverter. I've successfully modified the transverter for receive on a TS-850, but there's nothing in the TV502 manual about drive input levels. THe 850 puts out 0-10dBm. Any info would be appreciated.

Thanks

How about the ARRL Repeater Book? Look in the section for Ontario they are
all there.

To quote your own phrase..."for the N-th time", I passed a code test. It doesn't keep me off the radio, much to your dismay. It does, however, keep several qualified would-be amateurs from getting their licenses since they cannot see any possible reason for investing the time and energy in learning an obsolete mode of communication like Morse code. Just doesn't make any sense in the digital age.

My guess is that it will soon be a legal issue if the code requirements are NOT eased. The current policy is most definitely discriminatory, as there is no convincing legal reason to continue requiring Morse code knowledge as a condition of obtaining an amateur radio license with full privileges in this day and age. If the code requirements aren't eased, and ultimately removed, the issue will eventually be decided in the courts.

Yeah, I was really surprised when I listened to this repeater too. I
programmed just about all of the repeaters in a card I picked up at Jun's
Electronics. Took me about a month to abandon 2m and join a closed 70cm
system. I wonder why this repeater is still going. Perhaps it's a place
for these hams to hang out and not bother anyone else. Maybe one of the
people involved is the repeater trustee!

On 2m, I tried the local repeaters and was jammed repeatly. I guess my
KF... callsign indicates I'm a new Ham and probably a no-code Tech (which
I am) and the old timers immediately don't like me. I've had better
experiences using my CB when I was back in Elementary School!

On our 70cm closed system, there a control operator monitoring the
repeater most of the day who doesn't hesitate shutting down the repeater
if any unidentified stations transmit or anyone messes around.

Stumbled across a repeater in LA on 147.435 MHz, sounds worse than CB
(if that is possible). Routine use of the "F" word, "S" word, the
"A--hole" word, and such similar stuff I would think think wouldn't
pass "community standards" (as the FCC says). Also, noone ever
seems to do any legal callsign IDs
(not quite, the few people IDing, only a few but there are some, seem to
not use the dirty words). People jamming each other every
so often.

If I was the trustee, I'd just shut this machine down, or use the repeater for
a packet BBS machine or something.

I use dirty words off the air as much as anyone else does, but not
ON THE AIR. Guess I don't like to see radio equipment to be abused.

: >ferrite toroids. This link prevents RF injection into the mains, but
: >makes sure that my set is grounded to the mains earth. There is no direct
: >connection between the rig and the mains earth apart from this.

: While this may be the thing to do in the U.K., I would recommend
: against it. From the wiring faq (misc.consumers.house, sci.answers,
: news.answers, and other places):

: Furthermore, there should only be one grounding system in
: a home. Some codes require more than one grounding electrode.
: These will be connected together, or connected to the neutral
: at a common point - still one grounding system. Adding additional
: grounding electrodes connected to other portions of the house
: wiring is unsafe and contrary to code.

: Your connection connects extra grounding electrodes to the wiring
: of the house. The FAQ is written for North America (U.S. and Canada),
: but I would suspect that multiple ground (earth) connections is
: inappropriate for good reason. Your connection through a toroid
: is a fairly direct connection at power line frequency.

: Alan

Keep in mind that he is talking about an RF ground, which is very much
different from a DC or mains ground. If the DC/mains ground is to be
pressed into service as an RF ground, it may not work. Consider, if
the ground wire, including that in the wall, froim the radio to the
actual ground point is a quarterwavelength of the operating frequency,
the wire will act as a transmission line and transform the low
impedence at the actual ground point to a high impedence at the rig.
While the rig may be safely grounded for mains/DC, it will at the same
time be well above ground potential for RF.

Apparently, the FAQ referenced does not consider RF grounds. However,
all is not lost as there are a number of clever ways to provide a good
RF ground that is not tied to the mains ground and in fact is a
lousy mains ground! The trick is that what is a good ground at DC or
50/60Hz may be a transmission line at RF and needs to be handled as such.

Your Divisional Council welcomes your decision to join the growing
number of Amateurs and Short Wave Listeners who form the NSW
Division, by now all of the above mentioned should have received
their new-member's information kit together with a Certificate of
Membership.

Membership of the Institute entitles you to receive all the
services that are provided for members in their pursuit of the
wonderful hobby of Amateur Radio.

Should you have any questions, suggestions and even some
constructive criticism don't mhesitate to contact me, at any time,
by one of the following means:
Telephone (02) 831-8450 or by
Fax on (02) 621-1516

Cesar Miranda, VK2TCM
Membership Secretary

WICEN News
WICEN News

All WICEN members are reminded that subscriptions are now due; for just $10 you will continue to be a member of the only amateur radio organisation accredited by the State government to take part in a disaster situation.

Don't forget that WICEN is raffling a "Green Slip", donated by the NRMA; second and third prizes are generous orders upon a leading electronics retail firm. This raffle is open to everyone, not just WICEN or WIA members; for further details please contact any WICEN member.

This is a quiet time for WICEN, at least for Sydney members, and little is heard from other regions, although doubtless they are busy. Looking ahead to May, there is the Dobie Camping Area exercise, organised by Frank VK2XVJ, over the 3rd-5th May; the Senior Rescue Instructors' Conference is on 4-5th May; the Central Coast meeting at Wyong is on the 10th May; the closing date for the "Green Slip" Raffle is on the 11th May; and the Management Committee meeting is on the 11th May.

Future events for the calendar include the close of nominations for the Management Committee on the 8th Jun; the WICEN AGM is on the 14th July; the annual City to Surf Fun Run is on 11th August; JOTA is over 19th-20th October; and the Hawkesbury Classic Paddle is over 26th-27th October.

Those regions wishing to have their activities publicised on this broadcast are requested to have the details with the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Mid South Coast ARC

Members of the Mid South Coast Amateur Radio Club Inc. invite you to join them at their next quarterly meeting and social get together to be held Saturday 4th May at the usual venue of "Hancock's Ranch" in Little Forest Rd. Milton.

Little Forest Rd. turns off the highway 3kms north of the historic town of Milton. Follow the signs to the ranch.

Bring the family and your lunch. B.B.Q. facilities are available and the club provides tea, coffee, milk and sugar and afternoon tea.

We look forward to seeing you there.

from David VK2CX, Hon. Secretary

VHF DX Group

The Group is an informal grouping of active VHF and UHF operators. VHF DX Group meetings are held every second month and consist of technical lectures, equipment demonstrations and workshops.

The Group was formed to promote non-repeater VHF activity and to assist newcomers to the bands. Anyone is welcome to come to the meetings.

The next meeting of the Group will be held on the third Tuesday in May. This meeting will be a workshop on the "no tune" 1296 MHz transverter. At least one working example will be available for demonstration at the meeting.

Don't forget the Tuesday activity nights on 144 MHz and the Group's Sunday morning net on 146.0 MHz FM starting at 11.00 am. Please note the net frequency has now moved to 146.0 MHz to clear the prime FM calling frequency on 146.5 MHz. The Group apologises to anyone inconvenienced by the use of 146.5 in the past.

[146.000 MHz FM??? VK2KFU]

Submitted on behalf of Richard Soulie, VK2ARS

St George ARS

The Annual General Meeting of the Society will be held on ednesday evening the 1st of May at 7.30pm in the new venue, which is in the hall under the main floor of Grandviews Bowling Club, located at 821 Forest Rd Peakhurst.

Grandviews is next door to the Catholic Church, which is on the corner of Forest Rd. ans Isaac St. and direct access to the hall is available from the off street parking area at the rear of the club.

All club members are earnestly requested to attend this very important function, where they will have the opportunity to thank the outgoing officers for their service to the Society during the year and also to show their confidence nad high regard for the incoming office bearers by participating in their nomination and selection for the ensuing twelve months.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and other refreshments are available from the bar of the licensed bowling club above.

i don't have the 850 manual handy here, but most kenwoods do have a
memory reset function. on the 940 and 870 you hold in the a=b button
while you turn it on to clear everything. i would think the 850 is
probably the same. they usually bury that little fact in the back of
the maintenance section of the users manual.

What is all this I see on packet about gun control? Are we to have the big guns controlled? Are they working too much DX? Will the Brady bill affect the DX contests? I see where multiple transmitter DX stations are being regulated OUT (no more assault stations). I see where some communities are offereing $5O to 1OO for a gun (is a gun like a DX-40 or a QRP transmitter?). Those trying to control guns think they operate bands I never heard of (.22, .45 and a real strange band 30-30). Have the ARRL and N.R.A. gotten together promote big guns?

I guess hams do need big guns because from what I hear their "XYLs" are always complaining about pee shooters.

Burt

I get QSL cards that say "A.R.S. K1OIK", why would anyone write that?
The post office has N O idea what A.R.S. means.

I hear hams say "clear and listening." Why would anybody say that?
Clear means you are leaving the air, listening means you are staying.
Which is it?

On repeaters I hear a station call another but when there is no reply,
the calling station comes back and says "nothing heard." Does the caller
think we are all deaf and feels a requirement to state the obvious?

After I sent the above I did get this response ON PACKET:

To: K1OIK
Subject: Re:A.R.S.
Path: KQ1K

Shame on you Burt - you rambunctious little devil!! Did you not realize that
ars means "always ready for sex!!"
stay frosty and keep blowing on the coals!

6308. CQ DX, ham superiority

Message-ID: <318359D0.65BE@ccsnet.com>
Source record: 226724

Who the hell am I to call CQDX. I have been a ham for over 34 years and in 28 of those I could only afford crummy rigs and antennas. There were so many stations I could have worked (and called) if they were not calling CQDX. I have NEVER called CQDX, although today I am much better equiped. Many times when I call CQ I would prefer DX, who am I to EXCLUDE anyone. If someone wants to talk to me who am I to be selective? When my beam is headed towards DX and I get a domestic call it is usually from a station using a dipole, remember all hams are not "Big guns." And in reality to be a "real man" is not predicated on how much money you have. When you call CQDX, think about what you are really saying (calling anyone but no Americans need answer).

That reminds me of the Black Caucus in Congress. How about a White Caucus,
or in the USAF we had the Black-American of the year, yet there was never a
White-American of the year. Later they changed it to African-American of
the year, and I guess you don't have to be Black anymore, as there are a lot
of White South Aficans who after coming to America, refer to themselves as
African-American...

In response to Drew Durigan, who writes:

>My guess is that it will soon be a legal issue if the code requirements
>are not eased.

If that is the best reply you can come up with, knowing that not even
ORACLE would agree to a slow code license, and that ARRL's First VP
doesn't even believe amateur radio need be a technical hobby, then both
you and amateur radio are in trouble. For we will not be speaking of
amateur radio any longer. That's because your argument regarding
requirements can logically extend well beyond Morse Code: The same argument
you advanced can be extended from technical theory requirements,
to courses in high school and college that one takes but never uses again.
(The fact that there are those at Extra Class who don't know basic electronics
quite conclusively shows that knowledge of how things work is not necessary
for an Amateur License). What you suggest, Drew, is Anarchy, not Amateur Radio.

>The current policy is most definitely discriminatory, as there is no convincing
>reason to continue Morse....

As Jack Palance said in the movie Shane, "Prove it." One can argue all the
way down the line, from Amateur to Zoology, that exam standards of any
kind are, in the limit, discriminatory. But proving it will ultimately be very
difficult, because the opinion is based on nothing more than opinion, not
fact. In addition, getting in the door by the back door, as you suggest, will
have no other effect than to ultimately open the flood gates to most every
other licensing process in all other endeavors, besides Amateur Radio.
I well note that this "discriminatory" tactic is already in full force in
the country's educational system. One not need be a genius to recognize
that exercise has been devastating to the country. Which may explain
why, legal considerations aside, the mayors of big cities (the most recent
one being New York) has called for a no-holds-barred return to standards.
Students don't pass tests don't graduate. That's an extreme case of mayoral
backlash, and it will be interesting to see how it turns out.

In the last reckoning, what your statement simply says, in total, is that
amateur radio is a constitutional right. A few others are saying
the same. But should amateur radio become such, we will no longer have
amateur radio. We will have a personal radio service, which many already
argue (and with good reason) is already here. That's all fine and good,
assuming ARRL and FCC officially declare the new purposes and goals of the
Amateur Service. But de-facto deregulation, as I've said before, is
what is creating Amateur backlash now, the kind of excitement that
apparently frightens you.

Regards,
Vince, WB2EZG

I hear hams say "clear and listening." Why would anybody say that?
Clear means you are leaving the air, listening means you are staying.
Which is it?
<<
Yeah.. it does sound dumb... but it could be that the operator changed his
mind... and decided to stick around. Even more likely, "clear" is short
for "clear WITH xxx" (i.e. done with the QSO he was having) and
"listening" means "sticking around for another conversation.

"clear" doesn't always mean leaving the air.

Well, I've launched a few RS-232 devices into sub-orbital trajectories
before, in moments of frustration, but never so well as to require
tracking software to figure out where it came down.

There are two situations that I can recall:

1. International third party traffic needs logging.
2. If requested by an FCC inspector.

Burt,

If you offered all your packet gear and your computer tied to
irrevokable contract to never post again on any media I suspect we
could generate a bunch of cash quite quickly. Most of us are rather
bored by the same lame stupid insults repeated over and over and over.
Gosh Burt does this mean you're, shudder, boring.

Hi Robert:

In rec.radio.amateur.misc you write:

>Stumbled across a repeater in LA on 147.435 MHz, sounds worse than CB

Well known repeater for hundreds of miles here in Suothern California!

>If I was the trustee, I'd just shut this machine down, or use the repeater for
>a packet BBS machine or something.

Just want to mention a very, very positive aspect of the 435 machine.
It is on one frequency :-) . It provides a lot of people who seem to
want to rough ride in ham radio a place to do it! This is what the
frequency control knob on my rig is great for, I never need to listen
to it. The really great thing about it is that I get to hang out on
very family oriented repeaters. Most of the 435 boys and girls don't
seem to have the need to come over and mess with us there. They have
their own anarchic repeater for their activities. I applaud the
trustee for taking such a bold step in free speech, and giving the
rest of us the space to have more well-behaved repeaters.

i bought a stack of 1988 and 1989 QSTs at a hamfest yesterday. its interesting, in retrospect, to read the hemming and hawing, and finally the grudging admission that a no-code might be a *good thing*.

also, imho, is the 'dumbing down' that QST has underwent since the no-code revolution. do no-code techs really need instruction to turn their HTs on, or does the ARRL underestimate the intelligence of anyone who doesn't want to clutter their brain cells with didahs?

>IZ2ADI, Maurizio

Maurizio:

I have a high-gain DX-88 sitting in my basement. I used it for about 1 year, and concluded that in all but a few circumstances, a G5RV dipole at 10 meters high is a better antenna.

The DX-88 is a good omnidirectional antenna for 10, 12, 15, 17 and 20 meters. The 40 and 80 meter performance was marginal, at best. I didn't install any ground radials, which is recommended for this antenna. Installation was easy; my antenna was ground mounted. It took me about two hours to put the antenna together, but I could do it again in 25 minutes (experience!).

My impression of this antenna is that it's a good compromise if you can't put up a dipole; however you must have ground radials if you expect to transmit on 40 and 80 meters. You should ask around about the R7 and GAP verticals, as well. Good luck, Maurizio.

[Jim Nitzberg WX3B]

6327. conference 5/18

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-28 00:00:00 UTC
From: crm@oes.CA.GOV
Message-ID: <9604282323.AA20557@nic.teale.ca.gov>
Source record: 226743

EDUCATION CONFERENCE 5/18
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EDUCATION AND FAMILIARIZATION CONFERENCE, SACRAMENTO, MAY 18/19, 1996
This is the 9th annual Emergency Response Institute)ERI).

The purpose of ERI is to bring together the emergency communications response community to enhance knowledge and familiarity with people and systems, and increase our skill levels.

Founded in l987, past ERI sessions focused on emergency communications issues presented by earthquakes, wildfires, flooding, civil unrest and other topics.

ERI '96 will focus on:
(1) effect of new technology - cellular, computers, internet, etc.
(2) changes from mandated systems coming on line, and
(3) assisting managers enhance unit status with the local agency
(4) interactive networking

Panelists and speakers include (alphabetically):
ARRL Sacramento Section Manager Jettie Hill;
California Department of Forestry (CDF&FP) VIP Expert Charlie Jakobs;
CDF&FP VIP (Volunteers in Prevention) PIO Marty Wyatt;
CDF&FP Batalion/ECC Chief James Parrish;
CDF&FP ECC Officer Steven Beightler;
California Department of Transportation ACS Coordinator Tim Plaza;
Chief of Police City of Martinez Jerry Boyd;
Chief State Radio Officer Cary Mangum;
Civil Air Patrol CA Wing Director of Communications Gary Belda;
ERI Director and State ACS Training Officer Dave Larton;,
Past San Diego RACES Chief Radio Officer Ben Green;
RF Team Leader and Broadcast Engineer Dick Epting;
State OES ACS/EB-EAS/RACES Coordinator Stan Harter;
State OES Fire Branch Deputy Chief Paul Beckstrom;
State OES Inland Region Administrator John Passerello;
State OES Information/Technology Branch Acting Chief John Bowles;
State OES Planning James Watkins, former chief Telecommunciations;
Technical Specialist Scott Hensley;

ERI '96 dates: MAY 18-19, 1996 Conference Registration $20.
Saturday Evening Dinner and Workshop $16.50. Registration 8 AM 5/18.
Ends 12 Noon 5/19.

Conference facility is the Energy and Technology Center Rubicon Room, in the NEW SMUD Customer Service Center, 6301 S Street, Sacramento. Result is increased seating, superior facility. Fascinating building - situate in a Redwood grove - displays exemplary energy conservation.

IF you are SERIOUS about Emergency Communications you'll find this conference well worth the attending and mingling with like people.

CDF&FP Mobile Communications Center (COM 45) will be on display as will other agency emergency communications response vehicles including the OASIS Satellite transportable - equipment actively involved in emergency communications.

ERI '96 (ERI - Copyright 1987,1996 - The Larton Company - All Rights Reserved) is being presented with the cooperation of (alpabetically):
- American Radio Relay League (ARRL) Sacramento Valley Section,
- California Emergency Services Radio Association,
- California Governor's Office of Emergency Services, and the
- Sacramento Municipal Utility District.

To illustrate the use of the Incident Command System in action, the 1996 ERI steering committee was setup under the ICS system, with the ERI Director (Dave Larton) as Incident Commander. Plans Chief Stan Harter, 916-262-1603, can answer questions, as will Operations Chief Cary Mangum at 916-966-2291 or 916-262-1670 (eMail crm@oes.ca.gov or cmangum@mail.macnexus.org)

REGISTRATION FORM FOLLOWS, WITH ADDRESS FOR MAILING:

6328. QST CDROM

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-28 00:00:00 UTC
From: ac224@detroit.freenet.org
Message-ID: <4m0u9s$hnu@detroit.freenet.org>
Source record: 226744

Review: 1995 ARRL Publications CD-ROM

About 2 months ago, I ordered this disk based on USENET discussion and the ad in QST. The idea of dumping a years worth of magazines (I give them to charity, well, actually to N8EA) was appealing as I ran out of shelf space in my shack years ago. The lady on the other end of the phone line took my credit card number and promised delivery "in about 2 weeks". The disc arrived April 18th.

The next morning I tried to install the reader on my workstation at work. I may be the only person in history to actually get a CD-ROM drive working on the NCR 386SX computers we were given three years ago. For reference, these have 8 megabytes of memory and a built in SCSI interface. Long story. Really long...

The QST disk installs directly from the CD-ROM in about 10 minutes. All of the 380 megabytes of ARRL data remains on the CD-ROM, but the DynaText reader copies to 6.5 megabytes of hard drive. All 12 months of the 1995 QST, QEX and NCJ are on the CD. You get literally everything that was in the issue, including all the wordy QST "Departments", and endless lists of ARRL activities and membership information. There are even some advertisements. The index is quite good and quick though so it's not hard to get to those areas you are particularly interested in.

There's no printed documentation on the reader. The six page pamphlet that comes with the package describes how to install the software, then points you to the "Help" menu option to learn how to use the program. There are two annotated screen snapshots with enough information to get you started, and the remainder of the pamphlet is legal boilerplate.

The first thing I noticed was that it's *REALLY SLOW* on the 386, especially on the figures. A complicated drawing can take many minutes to draw on the screen. Luckily, figures are stored in standard Computer Graphic Metafile (.CGM) and Tagged Image Format (.TIF) format which are readable and printable by many other programs such as Microsoft Word or Corel Draw. I'd recommend a drawing program like Corel if you need to work with a figure rather than attempting to use the reader, although DynaText can print a whole article with pictures and drawings at one time. Printing is even slower than reading. You can easily have lunch while DynaText prints an article. I'd recommend at least a '486 at 66 MHz to comfortably use this software.

Text is another matter. There appears to be one huge file containing the whole years text on the CD (which makes the drag bar on the left somewhat useless for browsing) but you can cut and paste from the DynaText screen into your word processor. Here is the entry for the Livonia Swap and Shop pasted from the February QST:

}Michigan (Dearborn)_Feb 26, 8 AM to 3 PM. Spr: Livonia ARC. Dearborn Civic Center, 15801 Michigan Ave, SW corner of Michigan Ave and Greenfield Rd. SKYWARN, RACES, VE sess (prereg). TI: 144.75, 145.35, 146.52. Adm: adv $4 with table reservation, door $5. Tables: $15. Send 49 SASE to Neil Coffin, WA8GWL, c/o Livonia ARC, PO Box 2111, Livonia, MI 48151; 313-261-5486.

There is a good Search tool that will quickly find any text. On my '486 laptop, a search for all occurrences of the text "QRP" took less than five seconds, with 462 hits in the QST files. You can also search only titles, authors names and authors calls with the fielded search option. Searches can have concatenated arguments with the operators "and", "or", and "not", and the tool also supports proximity searches using the keywords: "after", "before", "of", "near", "within", and "word".

A method of creating your own bookmarks and Hyperlink tags is available. There are many ways to customize the display and most of the common options are available in a user positionable toolbar.

This disc is going to be a sellout, it has tremendous value. It costs about the same as a year's membership to the ARRL, and considerably less than an ARRL membership and subscriptions to QEX and NCJ. All of the software that's relevant to any article is on the disc as well. My only comment to the ARRL is, when are you going to issue earlier years on CD so I can clean out more shelves in my shack?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 APRIL AND FORECAST FOR 29 APRIL - 01 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 67/0

GOES satellite data for 27 Apr
Daily Proton Fluence >1 MeV: N.A.
Daily Proton Fluence >10 MeV: N.A.
Daily Electron Fluence >2 MeV: N.A.
X-ray background: N.A.
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Apr 30 Apr 01 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Apr: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 27 Apr
Learmonth 6 2322 1211
Fredericksburg 8 8
Planetary 7 7

Observed Kp for 27 Apr: N.A.

2B. MAGNETIC FORECAST
Date Ap Conditions
29 Apr 5 Quiet
30 Apr 5 Quiet
01 May 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
28 Apr Normal-fair Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
29 Apr Normal Normal Normal
30 Apr Normal Normal Normal
01 May Normal-fair Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
28 Apr 0

Observed Australian Regional MUFs:
Darwin: Depressed 15-30% 01-12UT, after which returned to
near predicted monthly values.
Townsville: Depressed 15-30% for the period 01-08UT, with
sporadic E observed 09-12UT, otherwise near predicted
monthly values.
Sydney: Near predicted monthly values,apart from 15-30%
enhancement observed during the period 13-20UT.
Canberra: Near predicted monthly values.
Hobart: Depressed 15% for the period 02-06UT, after which
returned to near predicted monthly values.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
29 Apr 5 near predicted monthly values
30 Apr 10 near predicted monthly values
01 May 10 near predicted monthly values

I'm a recently got my Tech. licence. I also couldn't afford much of a "rig". So I went out and bought the Radio Shack HTX-202. Can someone tell me how long a battery should last? I haven't been doing much more then listening and it seems the battery light goes on after about 30 min.'s or less. It takes ten hours to charge. I think you should be able to use the battery longer. Is this normal with all HT's, is it beacuse it's a Radio Shack, or do I have a bad battery?

Thank you for any help.

Well said Nick - I wholeheartedly concur.

Incidentally, re the original text which inferred that nothing good is
ever reported about amateur radio, there are magazines who do say a
great deal about amateur radio and where the bounds of expertise,
experimentation and knowledge are constantly being challenged, and these
magazines are Amteur Rdaio magazines, mostly written by amateurs. Per
se Dubus for one, and another whose title I seem to have forgotten!!!

I heard about this club and also sought some info from them. I from what I have found out. It was origonaly set up as a service org for the Gay community, and still is sort of. But it seems now to be more of an in your face type of thing. They have their main meeting at the big Ham convention each year and don't require members or elected officers to be licenced Hams.

Now I have no problems with anybody's personal life, lifestyle, religon, or whatever, I have no qualms about helping out at activites where my radio skills could help others. But I dont care for politicalizing and socal grandstanding in any form from left, right or center.

I reminds me of my days working at the shack. We once got in a stereo receiver that the repair center said they could not fix. Mind you, it was one of our own products. Anyway, something shorted out and damaged about two square inches of the main circuit board and all the components in that area. The board was really damaged (burnt). So instead of telling the customer the receiver was damaged beyond repair, I got the service manual, rebuilt the circuit board using some copper foil tape, installed new components, and the receiver worked wonderfully. All in all, about a three hour job for a non-technician.

You really have to wonder!

To extend the TX (RX is already extended) do the following:

1) Remove the 4 screws that hold the back cover of the unit on.

2) CAREFULLY pry the case apart (It's helps to remove the VFO/Mem/etc knob first)

3) On the FRONT portion (DTMF Pad) of the case, in the upper right-hand corner you will see a BLUE wire. Cut that carefully.

4) Reassemble the unit.

5) While holding the FUNC key, press POWER to reset the unit.

6) Viola! You know have extended TX!

Hope this helps all DJ-5GT users.

Sincerely,
Kevin Bednar

My beef is not that RS doesn't have an staff of RF engineers awaiting my questions, but rather that the staff is not even familiar with the products they sell. I never go into RS looking for advice, but I will ask questions about a product and expect that the salesperson can answer questions on basic functionality. Example: I was looking for an RF modulator to convert composite video into RF channel 3. The sales person directed me towards a CATV distribution amp, that they belived would accept composite video. When I told them that this wasn't what I was looking for, they further tried to convince me that this was what I needed. This usually isn't a one time incident either, it happens frequently.

>
I wish there were more managers like yourself in the San Diego area. I did find one store in Grossmont Mall where the staff and management where knowedgable of their products and their function. I'll be shopping there more.

The other beef I have with RS, which I can't blame them completely for, are the prices. Basically all I will by there is connectors and cables, and that is more of a convienience reason -OK, so I have to pay for convienience -like 7-11.

> If you want "horror" stories, I could tell you about all the various scams

>
Yea, true. At least RS doesn't try to scam customers by policy, like some autoshops where the Mechs are told by their manager to break something on your car, so they can sell you parts you don't really need.

SB QST ARL ARLB021
ARLB021 H-Ts OK at Olympics

The latest word from Atlanta is that Amateur Radio will be welcome at the Olympics this summer after all. ARRL Southeastern Division Assistant Director Jim Altman, N4UCK, reports ham equipment, including hand-held transceivers, is not on the list of items excluded from Olympic events. ''There was some thought at one time of banning all communications devices, including cellulars,'' Altman said. He said he had assurances ''straight from the horse's mouth'' that H-Ts would not be banned from Olympic venues, as had been announced earlier and confirmed by Michael Smalls of the Atlanta Committee for the Olympic Games' technology department.

Altman said he's been in close contact with the top security people in ACOG in his capacity as head of the ad hoc group under the ARRL umbrella that's coordinating the Amateur Radio volunteer force for the games in July, and the security heads have assured him that ham radio H-Ts--as well as CB transceivers and cellular telephones--will not be kept out and may be used in Olympic venues. Altman said not only will ham radio be allowed through the gates, hundreds of ham radio volunteers will provide ''contingency communications'' to support the security force's radio system. He expects to have approximately 350 ham radio volunteers.

Altman had no explanation for the earlier, contradictory announcement, but he did offer a word of caution: ''ACOG's decision-making process changes daily. This is the state of affairs today,'' he said. ''But I don't see any indication that it will change.''

SB QST ARL ARLB022
ARLB022 FCC 5 GHz news

The FCC has proposed making available 350 MHz of spectrum at 5.15-5.35 GHz and 5.725-5.875 GHz for use by so-called NII/SUPERNet devices. The spectrum includes part of the shared Amateur Radio allocation at 5.65-5.925 GHz. The unlicensed devices provide short-range, high-speed wireless digital information transfer and could support new wireless local area networks (LANs) and facilitate access to the Internet. The proposal is in response to Petitions for Rule Making from Wireless Information Networks Forum (WINForum) and Apple Computer Inc.

The FCC has proposed regulating NII/SUPERNet devices under its Part 15 rules. ''Unlicensed Part 15 status would facilitate spectrum reuse and provide protection to incumbent and proposed primary operations,'' the Commission's announcement said. The Commission also has proposed only the minimum technical standards necessary to prevent interference to other unlicensed devices as well as to services already using those frequencies, and to ensure efficient spectrum use. Proposed rules specify power limits, out-of-band emission limits and a basic ''listen-before-talk'' protocol. Details of the proposed rules are not yet available, however, according to ARRL General Counsel Chris Imlay, N3AKD. The FCC said it was encouraging industry to develop additional standards it believes necessary.

In a separate statement, FCC Commissioner Susan Ness said such unlicensed devices ''can play a vital role in meeting established and incipient needs for communications offering mobility, flexibility, versatility and economy.'' She said she was ''especially enthusiastic'' about WINForum's proposal, and said the proposal sets the FCC on a course that will ''bring substantial benefits, with no intrusive governmental intervention.''

ARLB023 FCC denies petition

ZCZC AG03
QST de W1AW
ARRL Bulletin 23 ARLB023
From ARRL Headquarters
Newington CT April 29, 1996
To all radio amateurs

SB QST ARL ARLB023
ARLB023 FCC denies petition

Citing overwhelming opposition, the FCC has denied a Petition for Rule Making, RM-8626, filed last year by Frederick O. Maia, W5YI, that would have prohibited one-way transmissions of bulletins and code practice--such as those aired by W1AW--on frequencies below 30 MHz. Maia had argued that such transmissions were outmoded and that some one-way, broadcast-type transmissions have interrupted two-way communications already in progress.

Maia publishes the commercial newsletter the W5YI Report, manages the W5YI-Volunteer Examiner Coordinator and publishes training materials for amateurs.

When he filed his petition, Maia expressed concern over the level of anger directed at certain one-way transmissions. ''The proliferation of these stations has caused chaos in the amateur community that has now reached crisis proportions,'' he said.

The ARRL said that Maia's arguments were overstated and inflammatory, and the League urged the FCC ''in the strongest possible terms'' to deny or dismiss the petition without further consideration. The League cited W1AW's 65 years of free service to amateurs; other countries whose amateur societies also conduct informational bulletins on the air; the absence of any allegations that W1AW creates any significant interference to ongoing amateur communication; and the value of W1AW's bulletins in alerting amateurs to emergency situations.

The League said that ''any on-air anger perceived by Maia'' ought to be the subject of FCC enforcement action, not rules changes, saying such situations were the direct result of the Commission ''allowing abuses to continue for months and years'' rather than addressing them in a timely manner in the context of the existing rules.

The ARRL also said that W1AW code practice as a free alternative to Maia's retail sale of code practice products ''is sufficient rebuttal to the allegation that the code practice has 'outlived its usefulness'.''

During the comment period, the FCC said it received 371 comments opposing Maia's request and 20 comments supporting it. While acknowledging some disagreement about the propriety of one-way transmissions on HF bands, the Commission said the overwhelming opposition to Maia's petition ''persuades us that the amateur service community continues to view the one-way information bulletins and the text for telegraphy practice to be of great value to the service.''

6348. Re: "CB radio" repeater, with dirty words, why not off the air?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-29 00:00:00 UTC
From: spress@pacificnet.net
Message-ID: <31855106.28435743@news.pacificnet.net>
Source record: 226614

Bob,

I am a frequent user of the AA6TK Repeater (or what we call here in Los Angeles "435". Yes, it is an absolute toilet, however, it is the ONLY free speech repeater around (vis a vie you can discuss ANYTHING you want.) We enjoy having 435 around. Most of the people who use 435 are quite intelligent and very good people.

Every Wednesday night at 8-9:30 we have the "renegade" roundup with N6TK (the repeaters OWNER) and his wife Cathy AA6TK.

On Sunday Night at 8-10 we have one of the LARGEST trivia nets around with well over 100 checkins.

On the last Friday of the month we have the Antique Radio Roundtable, which may add has been going steady for 13 years with only 3 interruptions.

This repeater may not meet your standards of good amateur practice, but, let me ask you this. What other repeater can you discuss masterbation and diahhrea in the same QSO without it being shut off?

Don't tell me have not experienced either one.....

On Sun, 28 Apr 1996 01:41:47 GMT, wa2ise@netcom.com (Robert Casey) wrote:

IMCT is a DOS based Morse code training package designed not only
for beginners but for the advanced student (1-20+ wpm). It includes
several testing methods, adjustable pitch, speed, etc. Plus an
on-screen radio lets you tune for QSOs!

Download a copy today at...

From: server@GRAFex.sbay.org
Date: Mon, 29 Apr 96 00:15:05 PDT
Message-ID: <gate.uNP5mD1w165w@GRAFex.sbay.org>
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

Hi ...

The following packet users at the NO8M BBS are marine mobile:

VE3COE, K3OJC, W6LJL, W7IJ

I have a few others ... maybe five or ten others. VE3COE is the
most applicable to your situation. He sails around all winter and then
heads back to Ontario during the summer. Tough life, eh? He has wind
generators, etc.

Packet is out. HF Pactor is the best choice.

Huh? TouchTone (R) (which later became known as DTMF) is a US invention
from back in the early 70s. If other countries have different tones
then that's their own fault - it has nothing to do with "commercial
imperialism."

So many kooks on here, so little time to respond to all of them...

Curtis, while monitoring sci.electronics.design, I noted several more or less polite requests from an antique radio newsgroup specifically requesting no more amateur radio posts - as forbidden by their charter.

If you would really like to convice the usenet user community you are not lazy, can I recommend you trim your address line to groups likely to be interested in what you have to say?

Take a look at my slimmed down list - perhaps that would be more suited to your purpose.

Sincerely,
Brian

I can't tell from reading the above who said what, but as a
physician I think I can speak with a litte authority about
HIV transmission.

1. HIV IS a virus...the letters HIV stand for (H)uman (I)mmuno-deficiency (V)irus.

2. AIDS is the clinical condition that develops when one has been infected with HIV for a long time.

3. HIV is spread by contact with ANY contaminated body fluid. The ones that most commonly carry the virus are semen and blood. This is because both of them have a large number of cellular elements, and the virus lives inside cells.

4. HIV is MOST CERTAINLY spread by receiving a blood transfusion. That is in fact the most reliable way to spread it. It cannot however be spread by GIVING blood. Blood banks have been testing for HIV since 1985, and the currently used tests are 99+% reliable; the main people who get missed are those who have just recently (within the 6 weeks prior to donating blood) become infected.

Is that sufficiently clear? If not please e-mail me & we can discuss it privately as this is not a subject that is within the charter of this news group.

It is usually less expensive to buy four 1/2 W resistors (widely available) and connect them in series and/or parallel to obtain the desired resistance and a 2W capacity. Many TV's, for example, use this approach for the collector load resistors on the final video amplifier. Not pretty to look at or historically authentic, but it does work.

What a complete load of junk text. Why not say it in less that a 1000 words? If you can't, it isn't worth saying.

Reminds me of one of the type of person who will just not shut up in a radio interview until the producer disconnects them or the other interviewer thumps them. They don't actually say anything worthwhile, they just like to choke everything else.

Frankly I don't care what the UKRS stands for, if it needs to use so much verbage, it hasn't clearly determined what it is about at all and I will not be joining.

How many times do I have to read messages from hams that send a "Thank You" addressed to ALL. When one seeks help and someone takes the time to respond, the least the receiver of help can do is send a simple individual reply for thanks. After all-the respondents to this call for help responded one by one. I have received up to 75 messages in a call for help and sent individual thanks to each. It was very time consuming, but it was the right thing to do.

Would you at your wedding, if you were the groom, get up at the end of the reception and yell out, "Gee, Thanks everyone for the gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to respond to someone who H E L P E D you.

Thankyou, Frank, for your honest views on the hobby. I felt rather sad after reading your article, but my sadness was reflecting your feelings rather than my own about our hobby.

I am an amateur who discovered the joy of radio communication through CB. I get the feeling that you believe that those who have come through this way are not the sort of amateurs you really wanted in the hobby. But I believe you are wrong - because those who have joined from CB are those who wanted to go further than local communications; those who suddenly saw a wondrous challenge in wanted to 'catch the DX'; those who were fed up with inane chatter and wanted to meet the discipline of amateur radio practice.

Your statement that says that multiple-choice questions made the RAE easier is, in my opinion, untrue. The questions are far from "guessable" and randomly choosing answers is statistically very unlikely to obtain a pass. That means that we really had to study and get our heads around electronic circuits - something alien to me at the time. These days I understand them but I recall at the time it being a hard struggle to understand how transistors were somehow able to amplify and oscillate and so forth. The RAE is a toughie and if you haven't got the sort of mind to get stuck into the theory then you will lose.

You talk sbout some amateurs being "consumers" rather than building or altering gear. I am such a "black box" amateur. I am hopeless with a soldering iron. My circuits have never really worked, although I am going to have a try with some kits soon to see if I can follow the instructions(!). But so what? What's wrong with off-the-shelf? Look at other hobbies - take photography - some are more intererested in composing pictures, and others in doing darkroom printing. Does that mean that one group is "lesser" than the other? Of course not. I buy off-the-shelf because I know the thing is going to work and that I can concentrate on building good aerials to catch those signals. Nothing I build is going to be as compact and advanced, and as good performing as my multimode! Why? Because I am hopeless at soldering - I say let the nice people at Yaesu do it for me!

Yes of course I get depressed when I hear some loud-mouthed yobbo on a 2m repeater here in London. But remember that Amateur Radio can be used as a source of company with like-minded souls. The people who frequent the London 2m repeaters are those whose day jobs are in vans etc..They are a hard-nosed lot but so what? Why not use Amateur Radio for this? Don't tell me that these are ex-CBers - they may be but I

heard abuse even in the days just before CB when I occasionally tuned my Airband radio to the 2m band (for some reason it could go that high!). I don't excuse bad operating practice - what I do is avoid 2m repeaters in London! I suggest you do the same.

The people who build to 'catch the DX' are a different lot. They're dedicate people who tune the systems to tweak evry ounce of performance from equipment they know well. They stay up late at night. They watch the weather and go chasing up a hill with a portable rig and talk to people in Yugoslavia (like I did last weekend!). They get on with each other. Respect each other. There's a camaraderie I have not experienced anywhere else. Their operating practices are shining examples of how Amateur Radio should sound on the air.

There is a feeling in 'old-timers' circles that Amateur Radio is not what it once was (whatever that means!), but that's just nostalgia kicking in. I have never got so much pleasure from our hobby than when I sold my 2m/70cm FM-only dual bander and bought a 6m multimode portable. My nostalgia is living it now - I am saying that I am 'currently never having it so good'. You say that the numbers of Amateurs are declining. Maybe that's true - but it's likely to be a mix of people who aren't into DXing and just got bored of FM local chatter along with a few Amateurs who have convinced each other that they are disillusioned by the hobby. I say "let them go". Where I work we call these people 'dead wood' and the hobby is likely to be better off without them. Excepting some unseen financial crisis sometime in the future, I'm not going anywhere, and I'm more than happy to fight to keep our band allocations - just let them TRY to remove any - we'll send in Walt (who writes a lot on this newgroup) - they won't know what hit 'em!

Let me conclude: Amateur Radio is a great hobby. It is as deeply challenging and wholly satisfying as it has ever been and that's not going to change. If you (and I mean any individual amateur) are bored then set yourself new challenges. If you've Worked All Britain, and have mananged to get nearly all the Locator squares then why not do it all again but use QRP! Do it on a VHF! You get what I'm saying?!

Oh, and if your friends who are amateurs are saying that the hobby is not what it once was - go and meet some enthusiastic ones - we're here!

After being in the publishing business and using Macs for many years I recently acquired a 586/100 PC running windows 95. Now that I have a computer to run the multitude of available ham software I would like some advice on a good logging program (commercial or shareware). Most of my QSOs are DX or rag chew but I would not rule out contests. I have a serial connection to a Kenwood TS 870 and would like that to be part of the application features. Any suggestions and remarks about existing software and sources would be appreciated.

Sounds like they're just making excuses for being lazy, since there are
codeless licenses in the US that give access to the vast majority of
amateur spectrum, and clearly there is no reason why they could not
take those tests.

>David
>KF6DGN

Hi David,

Although I am not extremely happy with the battery life of the 202, your
experience seems a little extreme. Mine will last just about all day when
I am just listening, maybe 7 or 8 hours. I use Radio Shack's hi capacity
AA nicads in the alkaline battery pack and they hold up better than
the sealed battery pack. (850 mah compared to 600 mah)

Check out the information on the HTX-202 on the DCARA Homepage.

Commercial tickets can be renewed just as always. You'll need a new
photograph (Telegraph tickets only), the proper form (call you local
FCC office for the number - it escapes me at the moment) and the
FEE (I think it's about $70).

Get that telegraph ticket renewed - they might not be issuing them much
longer!

Not nit-picking, or backing out of ANYTHING I have penned. Everything I have stated is fact, and I can prove it.

>You proved your ignorance on
>here big time, and everyone else seems to agree.

Is that right? Out of all the messages I got over this, all but 2 agreed with me, and stated, in so many words, that you are a homo-phobe buffon, who has his head up his a**. (direct quote from one writer)

By the way, it should be mentioned that out of the 2 that didnt agree, one was confused on the terminoligy, and the other was an anonymous troll trying to get a rise out of me.

>HIV can most definitely
>be transmitted through a blood transfusion, and HIV causes AIDS.
>Therefore, AIDS can and is most definitely transmitted through a blood
>transfusion.

AIDS itself can NOT be transfered this way. The *VIRUS* that *CAUSES* AIDS (HIV) can however. This is a medical fact, and I can prove it. Its ignorant and mis-informed people like Drew who perpetuate falsehoods, myths, and rumors about HIV and AIDS.

> Maybe those weren't my "exact words", but my intention was
>crystal clear.

Your original words, and your above words are incorrect...that is the only thing clear about your writings.

> I know it, you know it, and everyone else knows it.

You may have THOUGHT it, but everyone and myself knows the truth (fact) about HIV and AIDS.

>If you're still so sure of yourself, certain that you cannot get AIDS
>from a blood transfusion, why don't YOU go get one yourself. Maybe we'll
>all get lucky.

I know for fact that you cant get "AIDS" from a blood transfusion, however, one CAN get the VIRUS (HIV) which may, or may NOT, cause AIDS in humans.

This is a medical fact, but still off topic for this group. I will no further comment about it here, as it would only be responses to ignorant uneducated buffoons anyway.

My apoligies to the rest of the group for having to listen to me set some ignorant ones straight.

Take care.

Most people consider the code test you passed to be practically
"no code". Nevertheless, code does not keep those you were
speaking about from getting their license. The simply do not want
it badly enough to endure learning the code or perhaps memorizing
the answers to the questions for Tech.

I still think, getting your license and working from within the
Amateur Service to eliminate the requirement(s) you don't agree
with, is far more impressive than not.

6387. Re: Skywarn Organization?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-29 00:00:00 UTC
From: Gary Ross Hoffman <gary@carcs3>
Message-ID: <4m2kp1$8vh@newsreader.wustl.edu>
Source record: 226686

SKYWARN is a national PROGRAM run by the National Weather Service. It is managed by local offices of the NWS. I can't speak for other locations, but in St.Louis, Missouri the NWS holds several free classes/seminars during the spring. They teach the basics of weather spotting and how to report severe weather. Upon completion of the class, attendees are given a certificate and a "weather spotter ID number". The essence of being a SKYWARN spotter is that when you call in a report, the NWS knows that you've had some training.

The St.Louis SKYWARN training is a joint effort between the Nation Weather Service and St.Louis County Office of Emergency Management. If an attendee is a ham operator, he/she also receives a R.A.C.E.S. certificate from the county.

The SKYWARN program is not limited to just hams. St.Louis County, for example, also accepts weather reports on G.M.R.S. and C.A.P. frequencies. If don't have any kind of radio license, you can phone in your report.

22nd ANNUAL EASTERN VHF/UHF CONFERENCE

REQUEST FOR PROCEEDINGS PAPERS

April 29, 1996

The 22nd Annual Eastern VHF/UHF Conference is to be held August 23, 24, & 25, 1996 at the Quality Inn and Conference Center, Vernon, CT.

We are once again requesting articles to be contributed for the Annual Proceedings which is published in conjunction with the ARRL.

All material is to be forwarded by July 8, 1996 in a hardcopy format to Lili Lopez, N2RDN.

Documents must be "ready for press" quality, material cannot be reworked due to time constraints. Photographs are reproducible, black & white preferred for better resolution. Color will be accepted if b/w is not available.
Photo mounting positions must be identified on an 8 1/2 x 11 page with a 1 inch margin on all sides. Draw boxes and label within the box Photo 1, Photo 2, etc.
Label the backs of photos as Photo 1, Photo 2, etc. with a self-stick removable note.
Captions may be typed above or below the photo outline and text should be presented within the same margin if possible.

Please do not hesitate to contact us with any other questions.

Thank you for your continued support in making the Conference better than ever!

73,

Stan Hilinski, KA1ZE - contact Stan if you'd like to give a talk,
Conference Chairman - or conduct a bandsession at the Conference.

: soldering iron. My circuits have never really worked, although I am
: going to have a try with some kits soon to see if I can follow the
: instructions(!).

At least you haven't given in. Be warned that a lot of kits aren't
too wonderful. Some are a bit dodgy in the design department and need a
bit of knowledgeable tender loving care to get them going, some are so
bad that the quickest way to get one going is to dump it and start
designing from scratch (I jest not), some are OK, though. Very few are
good at detailing fault finding and setting up. You need to find

yourself a guru for the odd bit of help. Something finally going can do wonders for you, you learn a bit and get a bit more confidence to try something a bit more daring next time. Contacts are at least a thousand times more satisfying on something you built, and it is the first step towards your own designs (how do you think those who currently design things got going?) - and contacts are a million times more satisfying (that's 60 dB more smugness factor) on something you designed.

: But so what? What's wrong with off-the-shelf? Look at
: other hobbies - take photography - some are more intererested in
: composing pictures, and others in doing darkroom printing. Does that
: mean that one group is "lesser" than the other? Of course not. I buy
: off-the-shelf because I know the thing is going to work and that I can
: concentrate on building good aerials to catch those signals. Nothing I
: build is going to be as compact and advanced, and as good performing
: as my multimode! Why? Because I am hopeless at soldering - I say let
: the nice people at Yaesu do it for me!

Sorry, you're far from right here. The off the peg stuff looks great and tries to do everything, but don't be dazzled by the fancy boxes, all the features. When it comes down to the actual foundations - basic radio performance, they are fairly disappointing. You may not be able to match their appearance or load your homebrew stuff with as many bells and whistles, but you CAN build things at home, targetted specifically at your own mode and band interests that will allow you to work things that you would have missed on shop-bought gear. This is not a joke. This is not exaggeration.

: The people who build to 'catch the DX' are a different lot. They're
: dedicate people who tune the systems to tweak evry ounce of
: performance from equipment they know well. They stay up late at night.
: They watch the weather and go chasing up a hill with a portable rig
: and talk to people in Yugoslavia (like I did last weekend!). They get
: on with each other. Respect each other. There's a camaraderie I have
: not experienced anywhere else. Their operating practices are shining
: examples of how Amateur Radio should sound on the air.

The VHF people who go in for DX, meteor scatter, moonbounce seem a pretty lively lot who do not fit into the buy-operate stereotype. On HF, the QRPers are well worth meeting. Amongst these bunches there is the cameraderie you mentioned, and a refreshing change from the CW test/no test wars, RSGB love/hate business.

: Let me conclude: Amateur Radio is a great hobby. It is as deeply
: challenging and wholly satisfying as it has ever been and that's not
: going to change. If you (and I mean any individual amateur) are bored
: then set yourself new challenges. If you've Worked All Britain, and
: have mananged to get nearly all the Locator squares then why not do it
: all again but use QRP! Do it on a VHF! You get what I'm saying?!

Perfect sense to me! and applicable to many things

I once won the local clubs dressage championship, but the following year entered on a much more difficult horse. Most people couldn't understand why. It wasn't a challenge, there was little chance of winning, but the purpose was to work on the second horse and improve both of us. It was more fun this way, too. It's nice to get your moniker on a trophy, but once is sufficient to prove that you can.

Thanks for such a well-reasoned posting,

Cheers

David GM4ZNX

>David
>KF6DGN

I have the same radio and the battery lasts 1 - 1 1/2 days on
listening only. I can't transmit yet- I just passed my test and
haven't gotten my ticket yet. I think you must have a bad battery. I
have two and they both last a long time.

> she gets the info.

As radio amateurs under FCC jurisdiction enjoy it, Field Day originated in 1933 as an initiative--so far as we know--of ARRL HQ staff. The announcement of the first one appears as a sidebar--"International Field Day--June 10th-11th," taglined F.E.H. (for the ARRL Communications Department's Francis Edward Handy, W1BDI)--on page 15 of June 1933 *QST* (Its ending paragraph is so wonderfully, innocently portentous, considering how popular FD went on to become: "Besides offering an opportunity to get out in the open in this fine spring weather, the real object of this contest is to test "portables" wherever they may be available. If successful we want to make it an annual affair.")

The reason I write "as radio amateurs under FCC jurisdiction enjoy it" is because Handy was careful to credit earlier originators of the idea elsewhere in that sidebar: "The R.S.G.B. [Radio Society of Great Britain--WJ1Z], N. V. I. R. [the Netherlands society, I believe--WJ1Z] and R. B. [you've got me there--WJ1Z] are sponsors of similar national field days in Europe, and we hope this may assume an international complexion."

Hi all,

A non-connected friend of mine would like info about the Force 12 antennas
type: 5BA and 4BA.
If you have this info or have such an antenna, I would like to know what you
think of it. How does it perform??

Thanks a lot for answering (pefer e-mail).

Just my 2 cents, Your mileage may vary
Opinions are my own (most of the time).

David,
I think you do have a battery problem. I assume you are referring to
the NiCd pack. I have left mine on overnight on several occasions and
never run the battery all the way down. I think it should be good for
at least 10-12 hours on standby and low audio gain. How does it
compare with the other supplied battery pack when you put in alkaline
AAs? I have been very pleased with mine, use it as a mobile rig with
5/8 wave Larsen, as well as hand held.

The only reason to increase power is to allow the 1000MP to drive a
pair of 3-500's to full power. You can only increase power by 20 to
30 watts with the available heat sink and PS.

I really want to know WHY homosexuals feel the need to flaunt their aberration at the rest of us.......Can anyone enlighten me without getting too emotional about it. I'm really curious about this.

Amateur radio is supposedly based on equality and a certain amount of anonymity ...."From Champions to Newsboys", remember? I don't want to start a club of hetrosexual hams or any such nonsense.....I am interested in my fellow hams as kindred souls interested in radio communications, period! I have no interest in whether they are white, black, yellow, pink, what their ethnic background is, religious beliefs, sexual interests, etc. The fact that the person has a ham license (hopefully) is good enough for me and if they share some of my radio areas of interest so much the better. After all, its hard to be judgmental if all you hear from the other person is a bunch of dits and dahs!

So I guess I just don't understand WHY homosexual hams feel they should be treated any different than anybody else - and have their own special organization based on something that has NOTHING whatsoever to do with their common interest in amateur radio. I do not judge people for their sexual proclivities but I am really curious why this group in particular feels it necessary to do everything not as a person, but as a homosexual person and at the same time forcing it on the rest of us who may find the notion unpleasant. And, quite frankly, I find it offensive and I suspect many others do too.

I sincerely hope that someone can provide me with a rational answer that will make sense to me so I can try to understand it. I'm certainly ready to try.

However, for those who would get emotional on this hot issue, please be advised that I have donned my asbestos suit and am ready for all flamers (pun intended).

I guess both will qualify provided one is well-known enough.
There is, however, one person whom I missed in the list.
He was neither a politician nor an actor, but a very
important figure in the history of radiocommunication:
Ernst Krenkel, RAEM (silent key).

He was the radio operator on the Soviet ship "Chelyuskin"
which tried back in the 1930s the north-east passage in
the Arctic Ocean, but failed and sunk. With the saved radio
equipment, Krenkel maintained the communication between the
camp on the ice and the land, thus helping the rescue teams
to find the shipwrecked. For his merits, he was later
entitled to keep the callsign of the sunken ship as his
own radio amateur callsign.

In response to Drew Durigan:
If and when Borer files his petition, he will do well to initiate one
that accurately documents the whole spectrum of affairs.
That means stating that applicants for amateur licenses will have been
subject to a higher level of technical (theory) exam and Morse Code
requirements, which a "minority" of amateurs have passed. For if
he does not mention the former condition, he'll be called to
task by those amateurs filing counterpetitions. If Borer
should truly believe he will prevail in calling to task the entire
exam structure, both in and out of Amateur Radio, he's in for
a shock. The issue of exams, in and out of ham radio, is coming
full circle now, as issues often do in life. No more giveaways, as
government, and amateurs, realize the country is suffering from
an advanced case of compassion fatigue. ESPECIALLY in the
area of technical education.
.
Amateurs don't need that, and even new hams don't want to be
given anything. Even a good percentage of those entering the
hobby understand the issue here; they ALREADY understand the
entire exam has been "dumbed down." ORACLE knows it as well,
and now, so does the rest of the world. If the Service wishes to be the
laughing stock of the world, then carry on.

>components, and the receiver worked wonderfully. All in all, about
>a three hour job for a non-technician.

>You really have to wonder!

I used to work for Radio Shack too and have had similar problems.
After giving people the old "We service what we sell" BS, it was quite
embarrassing when the service center sent back a unit saying it was
"unrepairable". I have looked at some of these "unrepairable" units
myself and was successful at getting about 75% of them to work. Most
of the time it was cold solder joints due to poor quality control to begin
with.

I think these service centers are too lazy to look into any problems
that are not obvious or require more troubleshooting. If they can't simply
replace a board or a single component they balk and choke. Oh well, as
I have said before, good technically qualified people would not work
for the peanuts that Radio Shack wants to pay. That is why I left. I was
not making any money. I was stuck in a neighborhood store solving
the residents chronic fuse, patch cord and watch battery problems while
the employees who had the mall jobs were raking in the bucks selling
stereo systems, computers and other high dollar items.

Again this is not true. I draw your attention to the General Radio
Regulations, Part II, made thereunder in accordance with the provisions
of the Radiocommunication Act, (Revised Statutes, 1985, chapter R-2).
Section 42 of these regulations state:

42. Any person who hold one of the following certificates or licences
is elegible to operate an amateur station:

..

(k) a station licence for an amateur station issued to a citizen and
resident of the United States by the Government of the United States;...

Therefore, in order to operate an amateur station in Canada with a
licence issued by the FCC, one must be an American citizen in order to do
so legitimately.

>even mentioned...

>Is there a compromise in the CW debate?

I think there should be Bill..however, your proposal seemed to be a
bit comprehensive :)..
The key word in my proposal was "IN LIEU OF"..meaning no code
requirement AT ALL..
I like CW and I am proficient to 40 WPM, but I understand that it
is outdated and many of the new hams will not support it as a
continued requirement...I am proposing that a written test be offered
where the questions and answers are not made available so that you
cannot memorize them....you know I see more and more EXTRA class
licensees that require assistance in putting up a dipole!

There is something wrong with the current testing system, as far as I
am concerned. If a prospective ham can pass a real test and prove that
he/she knows what they are doing, then I have no problem with deleting
the morse requirement.. Do you agree? If not, why not??

Not sure of that, they still advertise both. I recently bought the FT-8500 with the MH-39 mike.

> What are people's impressions of this unit? Any rumors about the next
> model (an FT-9000?). Hopefully more characters (>6) for the alphanumeric
> display?

Six is all.

I like mine, but it did have a problem with a slight high frequency background noise on its audio. This was solved by putting a 220 uF 16V cap across the speaker leads, according to a Yaesu tech bulletin. Several other FT-8500 owners said they had the same noise, mainly noticeable when earphones are used. Yaesu tech support people think it is internally generated from a PLL circuit.

The radio does not come with the remote mount kit, so if you plan to use the removeable faceplate, you'll have to buy it.

All reports on my signal and output quality are positive. Several hams have asked what kind of rig I'm using - remarking that it sounds exceptional. The unit is very compact and solid. The case is nicely finished. Display is very easly to read. I like the way it flashes the frequency which is being received, so that if you monitor both bands, a quick glance tells you which one is active.

Operating it with a Cushcraft AR-270 on my chimney, I can hit repeaters all over the metro Dallas area with 10W very solid and easily. No sign of intermod problems yet, but I have not taken it into the downtown area yet.

It has a miniature multi-speed fan, thermostatically controlled (I think) integrated into the heat sink at the rear of the unit. It is fairly quiet, but I wonder about the long range reliability of the fan - no indication of problems yet.

My only complaint about the rig is that the power leads - about a foot long - come through the back of the unit to a modular connector (wires directly soldered to pads on the board) rather than having a jack on the radio.

The only controls on the radio itself are via one small knob which switches power and can change band and frequency. All other functions must be accessed via the buttons on the mike. It has a fairly complex menu system to get to some of the control functions like sub-band operation, but after a few days the operation of most functions is not too difficult.

I like the feel of the MH-39 mike, and when used with a remote speaker the audio out of the rig is good and reasonably strong.

Take all this with a grain of salt as I'm a rookie and have not operated any other mobile rigs more than a few minutes. I can compare only to my HT, and it of course gets out much better.

Jeeze, people. Picky picky picky. If you want to be technial about this
subject, then you should note that AIDS doesn't kill people either. Not one
person has been documented to have died by cause of the HIV virus. They all
died because their bodies couldn't handle pneumonia, and a multitude of other
common ailments.

And this is confirmed by its being entirely consistant with the US side of
that bilateral agreement:

The FCC's Rules for Amateur Radio (CFR 47 Part 97)

Subpart A - General Provisions

S 97.5 Station license required.
(a) The person having physical control of the station apparatus must
have been granted a station license of the type listed in paragraph (b), or
hold an unexpired document of the type listed in paragraph (c) ...

(c) The types of documents are:
(1) A reciprocal permit for alien amateur licensee (FCC Form 610-AL)
issued to the person by the FCC.
(2) An amateur service license issued to the person by the Government
of Canada. The person must be a Canadian citizen.

>Burn 'em up in no time. Series will be OK.

Of course, the resistors have to all be the same resistance so they share power equally. A series connection is no solution for that, as the larger resistors will then burn out first, since the power dissipated in each is I*I*R, and all resistors in a series string will have the same current flowing through them, thus more power in the ones with larger R. In a parallel connection, the smaller resistors will burn out first, as the power in each one is (V*V)/R, and the voltage is the same for all units. If resistors of unequal value are to be combined, then you would need to analyze both the total resistance and the power distribution. One way to do that is to compute equivalent resistance and power ratings to each series or parallel group, then treat the groups as single resistors.

There are 3 immediately obvious ways to interconnect four resistors of the same value so they share power equally:

Series:
```
---R---R---R---R---
```
Combined resistance = 4R
Resistance of each unit = desired combined resistance / 4

Parallel:
```
---R---
|--R--|
--|--R--|--
---R---
```

Combined resistance = R/4
Resistance of each unit = desired combined resistance * 4

Series/parallel:

```
------R---x---R------
|--R---x---R--|
```

The center node 'x' may or may not be connected, it makes no difference electrically since the voltage at both x's is always the same anyway.
Combined resistance = R
Resistance of each unit = desired combined resistance

The choice of how to interconnect the resistors depends mostly on the resistance values available and physical constraints of where they are to be mounted. Usually parallel works better in replacement applications since there will be only two connection points. Another factor to consider is stray inductance and capacitance. The parallel connection will have low inductance, but high capacitance. A series connection has the lowest capacitance, but higher inductance. To a first approximation, the series/parallel connection has the same capacitance and inductance (as well as resistance) of each single resistor.

You might note the judgemental tone of your "question" (which seems to
me awfully argumentative to be a serious request for enlightenment) and
think about how people might react to continual oppression by people who
seem obsessed with others' sexual practices. That is, your "question"
seems to me to be as "in your face" as the behavior of which you complain
and so maybe you shouldn't be surprised at the reaction.

After a while people who have some confidence in their own self worth
may choose to take a more assertive position that they had heretofore.
You may deprecate this a "flaunt their aberration" but others may see
it as an entirely healthy assertion of individuals' rights to have their
own identities. This probably happens more now that the gov't seems more
willing than in the recent past to keep "democratic" forms from being used
to institute a "tyranny of the majority" with respect to issues of race,
religion, sex, etc.

I think this misses the point. As Tom (W8JI) pointed out, it is extremely difficult to find true carbon composition resistors now. Nearly all are carbon or metal film, with the resistive element formed in a spiral around the body of the resistor. Newark still shows carbon comps in their catalog, but they have a large minimum quantity requirement and you won't know for sure if the resistors are actually carbon comp until you receive them and break one open.

None of this may be critical in an HF dummy load, but for parasitic suppressors in an amplifier, or for VHF/UHF work, it might cause problems.

Drew,

Having trouble passing the CW exam? Having trouble with a speed over 5 WPM. Why test on digital if one is never going to use digital? Why test on the knowledge of HF or VHF or UHF is one is never going to use a given piece of spectrum? Hell, why test on anything at all? Lets just give away the license. People in the U.S. don't want to have to work for anything anymore. Just add ham radio licenses as another entitlement program.

No point in asking G4JST - this was an old editorial of his in
'Electronics World + Wireless World', copied for us by our kind friend
Bert.

Frank Ogden isn't even Editor of EW+WW any more, so there's no point in
writing to that magazine either.

Don't think you can blame the no-code revolution. Most of those guys at the ARRL are generals, advanced, and extras. How they can look at a conjugately matched system, generate a second signal off-frequency from the first, not see a conjugate match at the second frequency, and conclude that a conjugate match doesn't exist at the first frequency is beyond "dumbing down". It is beyond belief.

Source record: 226532
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Folks,

I'm searching for PC software to demodulate RTTY and Morse. Ideally, this would be downloadable shareware or freeware for Windows 95 (although Win 3.x or even DOS software would be acceptable) and not require any additional hardware between the PC and receiver. If a software-only solution is not considered practical, please recommend an inexpensive interface I can purchase as I can not built any circuits due to color-blindness.

Any and all information and suggestions appreciated! Thanks.

Ridiculous. Firstly, unless the values of each resistor are wildly
different when in parallel the power dissipation will be about the same,
i.e put 4 resistors of four times the value you want in parallel.

Secondly, series resistors dissipate power by exactly the same rules so
the higher value ones dissipate more power.

Now, to answer the question try the following suppliers:

RS
Farnell
Maplin

Mike

It seems odd to me that you are offended that people want to choose their
friends; I don't usually associate with people who are rude or unfriendly
to me and find it odd that this itself should offend you. If it does however,
we need only avoid each other.....
>
>I sincerely hope that someone can provide me with a rational answer that
>will make sense to me so I can try to understand it. I'm certainly ready
>to try.
>
You might consider that many amateurs want to enjoy their hobby in the
company of other amateurs who are not hostile; many minorities are
excluded by aggressive action by members of various majorities. So, the
reason that Blacks, for example, might choose to join OMIK might have to
do with the exclusion perpetrated by (some) white amateurs in other clubs.
There are clubs composed of people who share interest in, for example, a
particular religion and also share an interest in amateur radio; for
some years an organization of Jewish amateurs and their friends advertised
their existence in QST. Likewise with LAMBDA and lesbian and gay hams.
Minorities need a "special organization" because bigots will attack anywhere
they can and minorities, like most people, want to enjoy their hobbies in
a congenial atmosphere - and this takes special effort for them.

It is the fact of exclusionary tactics (such as language like "flaunt
their aberration") that drives the people thus discriminated against to
form groups where they can enjoy their hobby free from such harassment.
If they had actually been treated "like everybody else" (which means being
accepted for what they are rather than lectured about "their aberration")
they wouldn't be forming their own clubs. Unfortunately, all it takes is one

aggressive racist, or homophobe, or religious zealot to make life miserable - and the chances of getting at least one in a large club are pretty good.

So, it seems to me entirely reasonable that members of any minority should form a "special" club so that they can enjoy their hobby in peace and tranquility and entirely unreasonable that those who practice discrimination should object even to this....

Discriminates against? Last I heard, a license was a PRIVILEGE,
not a right. Like a driver's license. If you can't read well
enough to read a road sign, you can't pass the test, ergo you
won't be allowed to drive.

No one forces you to get a driver's license if you don't intend
to drive a car or other motor vehicle.

I hope to heck they DON'T totally drop the code because of this;
complain, complain, complain, and they'll finally cave in to
your whining. Your energy could be much better spent on just
jumping over the hurdles placed in front of you.

Consider it a challenge (or is that contrary to the way Americans
think these days?).

Remember that nobody owes you anything. If you wanna wait until
1999 when they drop code as a licensing requirement to get on HF,
more power to you and more bandwidth for the rest of us. Have
fun waiting.

Well, sometimes it is. :-)

There are a number of rec.radio.* groups that are collected by
listservers, and e-mailed to subscribers.

That's why you often see 500+ line digests posted to the newsgroups,
caused by subscribers whose mail is bouncing. :-(

6441. screwed up icom mod

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-30 00:00:00 UTC
From: Ben Hastings <benh@concentric.net>
Message-ID: <3186BBC9.4F8D@concentric.net>
Source record: 226540

I got a mod for a icom z1a radio and of coarse, removed the wrong diode. I found the right diode, removed it, and used a meter & dummy load to test it. it works on extended TX, but the first diode in or out, doesnt seem to do anything. This diode is a very small one below the 4 diode pads but above and a little to the right of D15 (the one you are supposed to remove). It also has an inverted V on it. If anybody has any info on this diode and what it does, please post or E-mail me. Also, if you know what kind this is, only 2 connecters, please tell me the Icom part number because I partially melted it (when trying to reinstall it and it moved) and now the "reward" voltage is down to 1.8 volts (I have no idea what this does to the circuit).
Thanks in advance,

Unfortunately no, there is not. It would be too politically incorrect!
But its a great idea! I'm tired of all these special interest groups
rallying around for special privileges when we, the so-called "normal"
guys have to pay the freight.

Everybody comes down on the guys who refuse the homosexuals to march in
the Saint Patrick's Day parade here in South Boston. Well, what they
don't tell us is that anyone is welcome to participate in the parade.
What they don't want is a group of people marching and proclaiming
themselves to be homosexuals. South Boston is a place that has certain
community standards and they don't want to have to explain to their
children what homosexuality is when they are too young to understand. Its
really about community standards, a term that is used as a definition and
test of obscenity and pornography in this country.

Hams should define each other based on their common interest in radio
communication - and leave the special interest groups out of it.

Source record: 226556

>>...I also couldn't afford much of a "rig" ... a HTX-202...

The HTX-202 is a solid performer, David. Do not let anyone tell you differently.

>>...Can someone tell me how long a battery should last?

Everyone's experiences are different, of course. But 30 minutes is, indeed, too short for one of those batteries.

Have you "deep cycled" it? I mean, let it run ALL THE WAY DOWN - then charged it overnight? Did that change the batter life?

If you have a voltmeter, check the output of the wall charger. Maybe it is not up to par - although when they blow, they usually go completely dead.

If not, take it back to your local Radio Shack and obtain a replacement. They carry them as a stock item. If out of stock, have 'em pull one from another HTX-202 or HTX-404.

Your unit will also accept Icom CM-8 / BP-8 batteries! Periphex makes compatibles...so do other reputable companies. It is best to have an "intelligent" charger. But that adds another 90-100 bucks to your investment.

Please consider joining (a) your local Amateur Club and (b) the ARRL. Your local club will be invaluable to you - with assistance, guidance, and used equipment(!). ARRL Membership carries MANY benefits...one of which is an excellent insurance policy for your equipment.

Let us know how the battery situation goes, please!

I worked 30 countries+ this winter with a 21feet vertical made od #12 wire
hanging from a tree, with just 12 radials throwned on the ground and 100W.

You can also build a compact 80m center loaded or element loaded. I have one
on 80m 60feet wide apex at 15 feet and can work Europe no problemo on SSB
with my 100W. Its even easier in CW....

If you use the services that the local or national governments provide, directly or indirectly, then you have to pay for such services (every April). Just by getting in your car you utilize city/county streets and appropriate traffic control devices that you must help pay for. Heck, the DOT spent lots of money to ensure your car is safe to drive. Consider all the seimic studies conducted to make that federal highway safe. The examples number in the tens of thousands. Pay up, Jack.

>I couldn't have said it better myself!

That's too bad since Spew didn't say anything that made sense. His
major contradiction is that the frequencies the commercial folks want
are freely available to those with a code-free license. And these
frequencies make up over 90% of all US amateur wavelengths.

90% available for code-free licensees? So who's being kept out of the
hobby again, Spew?

I'm guessing that logging of spread spectrum communications is essential,
and that the content of transmissions be made available for inspection.

Is that true for third party traffic too ?

: and connect them in series and/or parallel to obtain the desired resistance

Bad idea to connect them in paralell. The smaller resitors will
draw most of the current and disapate most of the power.
Burn 'em up in no time. Series will be OK.

>
>Thanks
>Paul
>wb2oyc
>
I don't know if this will help or not, because the TS-520S uses a 9-pin
socket for the external VFO, not a 7-pin socket. Assuming the TS-520
also uses a 9-pin socket and is the same as the TS-520S, the pins that
are jumpered are pin 8 and pin 9.

Well, guess what? The FCC considers it perfectly acceptable for the class of license obtained, and that's all that matters. Personally, I consider it to be 5WPM more than what SHOULD be required, and I would guess that in time we will see changes made that will make that the case.

Borer says it all in the last paragraph of the article "...to force the rest of us to reach the higher proficiency level just to satisfy a MINORITY of long-licensed operators and thereby preventing the vast MAJORITY of us from accessing the HF bands, is not just wrong, it is CRIMINAL DISCRIMINATION and we must band together to bring about the needed change."

And band together we will. Unfortunately, I don't have the necessary resources to initiate legal action in this regard. But when someone else does (which will probbaly happen sooner instead of later), I would guess it would be granted class-action status, due to the overwhelming number of amateurs that the current policy discriminates against. If so, I would hope to be one of the first plaintiffs to sign on.

Even before you think of flaming me, I have NO interest in this venture. I'm reporting this for other hams, who want a QSO when the bands are dead. If you can get on the web, go to...

http://www.freetel.inter.net

You will find there free software you can download and talk to other hams [yeah and non-hams] over the internet. It's free.

Handy tip.....
For user information I put my call as my first name.
For my last name I put my cq message with a "!" first, in order to get me at the front of the listing.
I've been able to speak with people all over the globe, and I didn't even have to fire up the sb-200!

You need a soundcard, mike, and the software.

Again it's easy, fun, and *NO QRM*

The government's might is real enough, but the social contract is
absolute fiction. It's a concept the Court found necessary in order
to reconcile contradictions inherent to the government's demand that
socialism and freedom coexist. In the face of these contradictions,
the Court had no choice but to withdraw from logic (as I mentioned
earlier). No such contract can be shown to exist, but the Court's
opinion provides a rationalization that satisfies the status quo and
ends the legal search for an objective analysis.

In other words, the buck stops here, even if it's counterfeit. ;)

>Now we can renounce the contract by renouncing our citizenship, as

Regarding such people, they have merely abandoned a system that would
otherwise subject them to economic persecution. I have no desire to
exact revenge on them for demands the government makes of me, so I
don't find their motives to be of particular interest.

I'm considering the Yaesu FT-8500 dual-band mobile, since it's the only unit with 70cm capability and alphanumerics. I am looking at the radio with the more normal MH-39 microphone. In fact, HRO in Burbank said you can even get the FS-10 mic anymore!

What are people's impressions of this unit? Any rumors about the next model (an FT-9000?). Hopefully more characters (>6) for the alphanumeric display?

Excelent explanation Alan however I think it will be lost on Mr. Greenhalgh. Anything that does not concur chapter and verse with his ignorant assumptions is dismissed a fiction. He has a very strongly developed sense of right and wrong he is right the world is wrong.

As a sign prominent at our University proclaims: "Ignorance can be fixed, stupid is forever." Too bad but I'm afraid in Mr. Greenhalgh's case it is forever. Thanks for the injection of information and reason.

Being a world champion boxer would do .... or a baseball or NFL player!

:-)

Who rewound this tape????

come on Burt..at least some original stuff...I realize you're enviromentally sensitive,
but
quit recycling the same ol stuff...Give us NEW

73, I hear tha Cape is beautiful this time of year

HI,

Can anyone tell me how to listen to the OTHER signals available from
commercial TV satellites ?

I know it involves connecting a scanner to one of the Sat Receivers
outlets and then tuning in.

Which outlet ? where do I tune to ? What can I expect to hear ??

I have Icom 7000 and Pace receivers and tracking Satellite dish.

Please help..........

de Graeme.

6483. WTB: Rohn 45 Flat Roof Mount

WOW!!! That sounds awfully short. I keep mine in the car, and it goes for literally weeks without a recharge. Granted, I only use it when I'm driving (BTW, it's not the best rig for mobile use, but affordability is key). Ten hours to recharge is about right. Come to think of it, I don't ever recall seeing the battery light come on. Every other week or so I just bring the rig into the house and let it recharge overnight.

Try swapping battery packs with someone (if you know anyone with an HTX-202). That way you can isolate the problem to either a bad battery pack or a power-sucking transceiver. If it's a new rig, and the warranty is still good, you should consider exchanging it.

Good Luck & 73,

Vince
